ANNEX · 1 SEPTEMBER 2026

This annex is the companion to the 1 September 2026 edition and is built every day. The edition is capped at eight pages; material is RELOCATED here, never deleted. Section numbering tracks the edition: **A1** carries the full commentary for the live-tape tables and the gasoline chart, the full strait-operational record and the freight and war-risk record; **A2.3** the full cross-asset and macro record, the war-powers schedule and the SPR conflict; **A7** the source log; **A8** the on-demand update protocol; **A9** the methodology; **A10** the anchor and trigger levels. **A figure marked NOT OBTAINED — or, equivalently, NOT FOUND — was sought and missed, and is absent from the record rather than unchanged. A figure marked PROSPECTIVE relates to a session or publication that had not occurred at the Singapore cut and is not a retrieval failure (§9.46).**

A1 · LIVE TAPE — FULL COMMENTARY

A1.1 · Data integrity — ALL THREE checks CLEAR, the first clean sweep in three editions

§9.8, the ROW-level check: **CLEARS** decisively. The 31 August row is a genuine close, not a stale snapshot. Not one of the fourteen scored fields the last edition published as a 31 August intraday is identical to its settled value — every single one moved — and the row additionally carries MOVE at **75.32**, VIX at 14.92 and Asia LNG at 3,761, all three of which were blank at the 31 August cut. §9.35, the FIELD-level identical-value check: **CLEARS**. No field is exactly equal to its own prior value on 31 August or on 1 September, and the check was run at the precision each series is published to, per §9.48 — four decimals on the yields and the forward, three on Henry Hub and TTF, two on Brent, WTI, MOVE, VIX and the retail series. (!) The STRUCTURAL BLIND SPOT recorded in the 31 August corrections is repeated because it must be repeated every time this check clears: §9.35 is a DAY-ON-DAY test and is structurally incapable of seeing a restatement that moves a whole COLUMN across many sessions at once. A **CLEARS** on §9.35 is never an all-clear on the data. (It is a property of §9.35 itself, NOT of §9.49, which is the Threshold B defect.)

§9.41, the BASIS check: **CLEARS**, and this one is a positive result rather than an absence. The Brent continuation-to-active basis printed 2.12 on 31 August and 2.23 on 1 September, having stepped from twenty consecutive sessions of exactly zero. A stable, non-zero, same-signed basis on both sides of the step is what a correctly-rolled pair looks like, and it is the affirmative evidence that the 31 August step was the contract roll this document identified rather than a second restatement of the kind found in the same session. The WTI basis is likewise clean and stable across its own 21 August roll — 1.56, 1.57, 1.70, 1.90 across the four sessions shown, no sign change and no step. No new restatement was found anywhere: the 28 August close reconciles field by field against what the last edition published for it on every scored series without exception, and the 21 August 30-year still reads 5.2709. (!) The consequence of §9.36 survives the clean check and must not be forgotten: 28 August COA and 31 August COA are DIFFERENT DELIVERY MONTHS, so no day-on-day change may be constructed across that boundary on the active series however healthy the basis now looks. The four active prices and four active-basis trigger distances withdrawn last edition stay withdrawn.

§9.10, the two-way BACKFILL test: fires on FOUR cells — MOVE, VIX and Asia LNG for 31 August and AUTMUSAG and SOFR for 28 August — and TWO of them are consequential. MOVE, blank at the 31 August cut, has printed at **75.32** — ENDING the run of nine consecutive closes below 75 and removing the volatility leg of the Treasury downgrade. The last edition could not have known this and did not assert it either way; the leg was correctly reported as satisfied on the 28 August close, which it was. AUTMUSAG's 28 August cell, reported DARK yesterday, has printed at **$4.81** — one cent BELOW the **$4.82** of 27 August that was being carried as the last resolved value. On 14 August two dark AUTMUSAG sessions backfilled UP and destroyed a downgrade case; here one backfilled DOWN. Neither was predictable from the run, which is precisely why §9.30 forbids reading a trend through dark sessions in either direction. SOFR also backfilled, at 3.65 for 28 August, and is dark again on 31 August and 1 September.

A1.2 · Reconciliation of the 31 August snapshot — a near-one-directional miss, no exclusions, and one reading withdrawn by name

The Singapore-morning cut of 31 August preceded the entire US session, and every field except three moved the same way (§9.1, §9.31). No field is excluded from this table. Both the 28 August and the 31 August editions had to strike rows by name — for a Henry Hub and TTF restatement and for a restated Brent COA column respectively — and this one does not: every published snapshot value was a live print of the same instrument that settled.

Field	Published 31 Aug snapshot	31 Aug settled close	Gap
Brent CO2	87.78	88.37	+**$0.59**
Brent COA (active)	89.95	90.49	+**$0.54** — MEASURED, because both sides of this gap are the post-roll November contract. It is a timing gap, not a delivery-month difference
WTI CL2 / CLA	83.32 / 85.00	84.06 / 85.76	+**$0.74** / +**$0.76**
Henry Hub / TTF	2.856 / 68.990	2.935 / 69.809	+**$0.079** / +**€0.819** — and the TTF gap is what turned an intraday above the record into an actual record CLOSE
DXY	99.605	99.428	–0.177 — one of only three fields to move the other way
2-year	4.3227	4.3415	**+1.88 bp**
5-year / 10-year	4.4648 / 4.7081	4.5002 / 4.7500	+3.54 / **+4.19 bp** — the snapshot missed BOTH new **war-high closes**
30-year	5.1983	5.2423	**+4.40 bp** — and this **4.40 bp** is the difference between a sixth Threshold B lapse and B holding a second close
2s10s	38.118	40.635	+2.517 — the snapshot had the direction right and the magnitude short
10y BE / 5y5y	2.3248 / 2.3003	2.3206 / 2.2885	–0.42 / –**1.18 bp** — the snapshot had 5y5y back ABOVE **2.30%** and it settled BELOW, for a second consecutive close

ONE READING FROM THE 31 AUGUST EDITION IS **WITHDRAWN** BY NAME (§9.20, §9.31). 'The 31 August intraday is short by **0.17 bp** and would, on a close, be a SIXTH lapse' — the 30-year settled at **5.2423%**, CLEARING by **4.23 bp**. Threshold B held its second close and the ordinals are unchanged at eleven states and ten changes. Four further statements are **SUPERSEDED** rather than withdrawn, and the distinction is kept because they were true when written. (a) 'TTF **€68.990** … an INTRADAY and NOT treated as a record' — correct at the time, and the close then settled at **€69.809,** so a **record close** now exists and is reported as one. (b) 'AsiaLNG, MOVE, VIX, SOFR, GasAAA and GasDOE have no 31 August print' — three of the six have since printed. (c) 'AUTMUSAG DARK on 28 and 31 August, last resolved **$4.82** (27 August)' — 28 August backfilled at **$4.81** and is now the last resolved value. (d) 'NO JMIC Update 091 or later obtainable' — 091 was obtained this edition; no cumulative count past 97 has been OBTAINED — 091 itself reports NIL new incidents, and Update 092 was not retrieved (A7). (!) And one statement is expressly NOT withdrawn: the 31 August edition's reading of 28 August as a front-end-led **BEAR FLATTENER** was correct for 28 August. 31 August was a **BEAR STEEPENER**. Two sessions, two signatures, and the earlier is not retracted because the later differs.

A1.3 · Energy, gas and the physical record — full commentary

Crude. Brent CO2 closed **$88.37** on 31 August, up 27 cents, and the week-on-week comparison against the 24 August close is –**$2.17.** (!) The largest crude move of the window was not Brent but WTI: CL2 rose **$2.23,** roughly eight times Brent's move, and CLA **$2.36.** A session whose news was entirely Middle Eastern moved the American benchmark eight times as much as the international one. This document does not have an explanation it can source for that, and it is recorded as an observation rather than dressed as a finding. The **$95** upgrade is **$6.63** away on the scored CO2 series, narrowed from **$6.90,** and the ten-reading sequence — 9.78, 8.43, 5.55, 5.21, 3.03, 7.73, 8.06, 6.48, 6.90, 6.63 — has narrowed six times and widened three. The active contract closed **$90.49** and **$4.51** from the trigger; that is a different delivery month, is not the scored distance, and is not comparable with any figure published before 31 August.
Gas, and the triangle that identifies the shock — one leg of which moved. TTF closed **€69.809,** +**€2.830,** a **NEW WAR-RECORD CLOSE** that takes out the **€68.457** of 24 August. It is the TWELFTH **record close** of the war and the sixth since 18 August, and it is +**123.6%** against the **€31.227** pre-war anchor. Asia LNG printed after all, at **¥3,761,** –24 — the THIRD-highest close of the war behind **¥3,793** (25 August) and **¥3,785** (28 August), and +**125.3%** against **¥1,669.** Henry Hub closed **$2.935,** which is **4.18%** BELOW its **$3.063** pre-war anchor — a discount that has NARROWED from **5.71%** in one session and from **8.23%** on 21 August. (!) The triangle still identifies a routing dislocation rather than a global shortage: **123.6%** and **125.3%** against –**4.2%** is not a shortage, it is a map. But note the direction of travel. The American leg has closed four percentage points of its discount in six sessions while the import benchmarks set records. On a single print that is nothing; if it continues it is the first evidence in this war that the US gas market has stopped being the control in the experiment, and it would need to be said plainly rather than discovered late. The 1 September TTF intraday of **€70.520** is higher again and is NOT treated as a record (§9.31). (!) EU storage is carried at about **63%** full, the lowest seasonal level since 2009, against a European Commission target of **80%** — an INHERITED figure whose original date and publisher could not be re-established this window, and it is flagged rather than dropped (§9.13, §9.19).

A1.4 · Strait operational — the full record, every provider, every denominator

Provider / universe	Reading	Denominator, and what it is NOT
JMIC Update 091 — US NCAGS	65 Strait transits over the 72 hours 27–29 Aug	**'U.S. NCAGS data reflecting U.S.-facilitated Strait of Hormuz transits only'**. Stated historical average ~138 vessels/day on a 2025 baseline. (!) This counts vessels the US Navy is shepherding — a measure of ESCORT ACTIVITY, not of a functioning waterway
JMIC Update 091 — S&P Maritime / SeaVision annex	NINE for the SAME three days: 8 cargo and 1 tanker. Daily SoH cargo totals 23–29 Aug: 1, 1, 0, 1, 0, 6, 2. Daily tankers: 2, 0, 6, 4, 1, 0, 0	'Cargo-carrying vessels above 1,000 DWT, excluding vessels calling Iranian ports adjacent to the SoH', non-facilitated. (!) 65 and 9 sit in ONE document for the SAME window. Two denominators, printed side by side by their own publisher, and NOT blended here (§9.24)
UKMTO VRA Overview No. 4 — AIS plus dark	101 outbound / 103 inbound over the seven days to 27 Aug; 370 / 384 over 30 days; 1,270 / 1,010 since 28 Feb	**22%** and **23%** of UKMTO's OWN pre-conflict average, which is NOT printed on the page obtained. STILL THE CURRENT EDITION: No. 5 is due Friday 4 September on the weekly Friday cadence of Nos. 2, 3 and 4 — **PROSPECTIVE**, not missed
UKMTO VRA Overview No. 4 — AIS only	'Approximately **90%** below pre-conflict baselines'. Route split: outbound 20 Northern PGSA / 10 Southern Oman TTW / 0 TSS; inbound 17 / 12 / 0	**(!) THE SAME DOCUMENT, A DIFFERENT UNIVERSE**. About **10%** of normal against 22–**23%** on the other basis. The AIS-only sub-count of 30 out and 29 in does not reconcile to the 101/103 headline and is not made to
TankerMap	SEVEN transits over the seven days 24–30 Aug; 1.0/day; –**30%** on the prior seven days. Thirteen vessels in the zone on 31 Aug. (!) Its published DAILY row runs 25–31 Aug — 0, 1, 2, 0, 1, 2, 0 — a window offset by one day that totals SIX, so the daily series does not reconstruct the seven-day headline and is not made to	TANKERS ONLY, its own AIS. Long-run reference ~21 tankers/day. Not comparable with any all-vessel count
IMF PortWatch — RECOVERED	3 commercial crossings on 23 Aug = **4%** of normal	**Its own pre-crisis median of ~85/day from a fixed window 28 Feb 2025 to 27 Feb 2026**. Publishes weekly with a ~2-day lag. (!) **NOT OBTAINED** in the last two editions and obtained here — the negative was a retrieval failure, as §9.23c required be assumed
Lloyd's List Intelligence	114 transits 17–23 Aug, +**30%** w/w; at least 42 westbound against 29 in the prior week; Iranian-linked transits +**18.5%** w/w	Its own vessel universe and its own dark-transit confirmation lag; pre-war reference >3,000/month. STILL its latest public brief; the USNI weekly that carries it is due 4 September
Kpler via Gulf News	2 commodity vessels on 24 Aug — its lowest daily tally since early May	Its own 10-day average of about 14 VISIBLE commodity vessels. Not comparable with the Kpler crude/LPG/LNG-only series that gave 112 for 1–19 August
CENTCOM blockade tally	82 redirected / 3 disabled / 2 boarded — RE-DATED to 29 Aug by JMIC 091, NOT incremented	**From 71 on 24 Aug and 68 on 21 Aug**. (!) Its DATA DATE is 29 August, so it PRE-DATES the Iranian retaliation entirely and PRE-DATES the Larak strike by less than a day. It is NOT evidence about either. What it does show is that the tally has not moved since the 82 first reported for 28 August, against 71 on 24 August and 68 on 21 August — a flat reading after a week of increments, which is either a reporting lag or a change in tempo, and the record does not say which
NOT OBTAINED this window	Windward Hormuz brief (latest is 19 Aug); LSEG entirely; UKMTO Advisory 123-26 primary PDF	Sought and missed, not unchanged. Windward's 27 and 30 August posts are navy-tooling marketing pieces, not situation updates

Incidents, and the count that does not hold them. UKMTO Warning 124-26, obtained as a primary PDF: a tanker struck by THREE unknown projectiles at 2000 UTC on 31 August, 17 nm EAST of Khasab, OUTBOUND, source a Company Security Officer; no casualties and no environmental impact; vessel, flag and IMO withheld. Warning 122-26 is also now a primary document and its provenance is **CORRECTED** against the last edition: report time 2053 UTC on 29 August, ISSUED 30 August, source MILITARY AUTHORITIES, vessel INBOUND, 12 nm north of Khasab, and marked a time-late report. The last edition carried it on a Tier 2 relay and dated its issue to 29 August. UKMTO Advisory 123-26, 31 August, records a tanker / military-forces interaction east of Muscat with no vessel name, flag, IMO, course, crew status or position published at all; (!) its primary PDF was NOT OBTAINED and the content comes from a Tier 3 aggregator. (!) JMIC 091 records 'Total of 97 incidents since 01 March; **NIL incidents** since the last report' against an ICOD of 301500 UTC. Warning 122-26's own report time is 2053 UTC on 29 August — INSIDE 091's reporting window by roughly eighteen hours — and the count is nonetheless unchanged. Warning 124-26, at 2000 UTC on 31 August, post-dates the cut-off by 29 hours and cannot be inside it. So one Khasab strike is unexplainedly absent from the 97 and the other is simply too late for it. Two Tier 1 counters, printed and not reconciled. On mines the allied record now contains four dated official statements and they do not agree: Adm. Cooper on 27–28 August that the internationally recognised routes are free of Iranian sea mines; CENTCOM on 31 August that 'This is FALSE. No ships have hit mines in the Strait of Hormuz'; CENTCOM's own 30 August justification that IRGC forces were preparing to launch rockets carrying sea mines into the Strait; and JMIC Update 091, ICOD 30 August, that mine danger areas are still active and clearance operations continue — both passages flagged '(No change)'. The **FLOW-not-STOCK** reading is the only one that fits all four. JMIC 091 also holds threat levels unchanged — Strait of Hormuz SEVERE, Gulf of Aden and Bab el-Mandeb SUBSTANTIAL, the Gulf of Oman, Arabian Gulf and Arabian Sea MODERATE — and records Bab el-Mandeb transits of 81 over 27–29 August against a stated ~61/day 2023 baseline, MV LUTUF released on 29 August after twelve days, and five vessels still held. AMARA (IMO 9333280) is carried unchanged as SEIZED, status unknown since 19 August; no release, movement, charge or position report dated 20 August to 1 September was obtainable, and her absence from JMIC's held-vessel list is not evidence of release because that list covers Somali and Yemeni piracy holdings only. The FIRST numeric Iranian casualty figure for Larak also landed in the window: IRNA, quoting the GOVERNOR OF QESHM ISLAND, 'two people were martyred and several others were injured'. (!) **TIER 3**, semi-official, and replacing the IRGC's earlier unquantified claim; NO US battle-damage assessment of the two launchers was obtained. A separate Iranian seizure was claimed on 31 August — a sugar-carrying bulk carrier detained for allegedly discharging burnt oil, bilge water and industrial sludge, per Esmaeil Makizadeh of the Hormozgan Ports and Maritime Department via IRNA. (!) **TIER 3** only; the two re-publications found add nothing independent; Iranian authorities expressly declined to disclose flag or crew nationality; and the vessel name and IMO are **NOT FOUND**. It is in no Tier 1 count.

A1.4a · Primary text — the six statements the judgment rests on, verbatim

Relocated here from the headline under §5A so the judgment can be read at length while the wording stays auditable. Each is quoted as its publisher wrote it; the tier and the retrieval route are in A7.

Source, tier and date	Verbatim
Petra (Jordan News Agency), Jordan Armed Forces spokesman — **TIER 1**, 31 Aug 06:41	'air defense systems successfully intercepted and destroyed eight missiles that violated the Kingdom's airspace early Monday morning' — and, separately, that the forces 'handled the breach with precision, destroying the projectiles before they could pose any threat to citizens or property'. **(!)** It does NOT name Iran, the targets or any base, and gives NO launch total
Iranian Ministry of Foreign Affairs, via Mehr — **TIER 1**, 31 Aug	Iran targeted US bases in Jordan because they 'had been used to launch and support attacks on Iran', and its armed forces 'will not hesitate to exercise the inherent right of self-defense'
Qatar Ministry of Foreign Affairs — **TIER 1**, 31 Aug	condemned 'renewed attacks by the Islamic Republic of Iran targeting' Jordan and the UAE as 'a blatant violation of the sovereignty and territorial integrity of the two states', calling for 'an immediate and complete cessation of all military actions'
JMIC Advisory Note Update 091, ICOD 301500 UTC — **TIER 1**, 30 Aug	§2B: 'There remained a continued risk of drifting or uncharted mines in and near the TSS, with mine danger areas still active.' §5B: 'Navigation interference persists, and mine-risk reporting remains relevant within and adjacent to the TSS. Clearance and mine-surveying operations continue throughout the Strait of Hormuz', with coordinates from NAVCENT NCAGS. **(!)** BOTH flagged '(No change)'
@CENTCOM, rebutting an IRGC mine claim — **TIER 1** via Tier 2 relay, 31 Aug	'This is FALSE. No ships have hit mines in the Strait of Hormuz', characterising the claim as 'yet another IRGC attempt to intimidate regional commercial shipping through disinformation'
President Trump — **TIER 2** (Fox; and the Oval Office pool), 31 Aug	'We're going to hit them hard' and 'There will be a response'; and, the same evening, 'This is a relatively little war for us. This is not a big war… They're a failed nation… That doesn't mean we won't smack them.'

A1.5 · Retail fuel — three series, never compared

Series	Reading	Status
AUTMUSAG — AAA all-grades, the SCORED series	**$4.81,** 28 August — **BACKFILLED**	The last edition reported 28 August DARK and carried **$4.82** (27 Aug) as the last resolved value; 28 August has printed one cent lower. DARK on 31 August and 1 September. 21 cents above the **$4.60** downgrade condition, 6 cents above the **$4.75** that fired the upgrade. §9.30: no trend read through dark sessions in EITHER direction (§9.10)
AAA published headline, read direct 1 Sep	Page stamped 'price as of 8/31/26': regular **$4.0807,** mid **$4.5699,** premium **$4.9582,** DIESEL **$5.6002,** E85 **$3.1207**	**The stamp advanced exactly one day and the page's prior-day row reproduces the values carried yesterday** — a clean roll, no restatement. Regular –1.84c w/w and –2.54c m/m; diesel –1.32c w/w but +24.74c m/m and +**$1.8999** y/y against regular's +89.22c. (!) The m/m diesel figure is **CORRECTED** from +26.4c because AAA's month-ago row now reads **$5.3528** — a comparison window moving, not a restatement. Diesel is 21.57c below the ALL-TIME record of **$5.8159** of 19 June 2022, four years before this war. Highest state Hawaii **$5.4214**
USRFRUSA — DOE regular, weekly, corroboration only	**$4.085** for the week surveyed 24 August	EIA's own table has regular 4.006 → 4.049 → 4.085 and on-highway diesel 5.257 → 5.454 → 5.652 across 10, 17 and 24 August. The 31 August survey arrives with the 2 September WPSR and is **PROSPECTIVE**. (!) A LAGGING Monday survey: AAA's daily series has been falling for several sessions, so the roll-over is expected but is not scored until it prints

The political instrument attached to this channel became visible in the window. The AAA national average has been above **$4** a gallon on every day of August, reported as the first time that has ever happened, and AAA's own site banner on 31 August reads 'Gas Prices Remain High as August Will Likely Set New Record'. The President convened refiners and fuel distributors for 1 September with Interior Secretary Doug Burgum, Energy Secretary Chris Wright and National Energy Dominance Director Jarrod Agen, to examine domestic refining capacity and whether lower input costs are being passed through to consumers; refiners were expected to bring proposals on capacity and on state and federal disincentives to operation. (!) The meeting is **PROSPECTIVE** at the cut and no readout exists. Nothing in the reporting signals an SPR release, an export restriction or a price control — the framing is supply-side and regulatory, with Venezuelan barrels named as a supply lever. It is recorded because a policy response to the pump is exactly the transmission this channel was built to detect, not because anything has happened.

A1.6 · Freight, war risk and ports

Baltic Exchange week 36 is DUE FRIDAY 4 SEPTEMBER and is **PROSPECTIVE**, not missed — the roundup publishes on Fridays and the week 35 page's own forward link is blank. Week 35, dated 28 August, therefore stands as the current print and was fully re-verified against the Baltic's own page this edition. TD3C (270,000 mt Middle East Gulf to China) at WS623, 54 points stronger on the week, a daily round-trip TCE just over **$647,000** for the standard Baltic VLCC; TD34 (Gulf of Oman to China) at WS232.5, a round-trip TCE over **$219,400**/day. Every non-MEG crude route softened in the same week: TD15 West Africa–China −17 points, TD20 Nigeria–UKC −86, TD33 −70, TD27 −78, TD6 CPC–Augusta −135, TD26 ECMex–USG −182, TD9 Covenas–USG −163; TC2 ARA–USAC printed a NEGATIVE round-trip TCE of −**$4,225**/day. On the clean side the MEG-loading routes firmed — TC1 to WS540, TC5 to WS579.38, TC17 to WS525.00 — while TC14 and TC8 softened. (!) The structural read is unchanged and it still cuts against the transit-count improvement: the freight market is pricing tonnage almost entirely on Hormuz risk, and week 35 repriced that risk UPWARD. (!) The transit comparison the last two editions drew alongside it is NOT repeated here: the only overlapping series are UKMTO VRA No. 4, which is unchanged and covers a different week, and TankerMap, which is DOWN **30%** — and merging providers into one 'transit count' is the splicing §9.24 forbids. What can be said on the freight data alone is that Gulf-loading rates firmed 54 points while every non-MEG route softened, which is a pure chokepoint premium; tonnage availability, ballast positioning and cargo mix can all move a freight assessment, so it is corroboration and not proof.
WAR RISK — THE EXPLICIT NEGATIVE STANDS FOR A SECOND EDITION. No named broker published a percentage of hull value dated 29 August to 1 September. The recirculating '**7.5%** to **10%**' band still cannot be re-sourced to any named broker after July and is NOT published as current. The best-dated attributable figure remains a range of **3%** to **10%** of hull value against about **0.25%** before the war, attributed to Marcus Baker, Global Head of Marine, Cargo and Logistics at Marsh, and dated 17 JULY 2026 — carried with that date on its face (§9.19). Lloyd's List separately reports the world's largest broker confirming a 'mid-single-digit percentage points of a vessel's value' figure for Strait trips, consistent with the Marsh range, but its date could not be established and it is not used as a current reading. The Joint War Committee listing is unchanged: JWLA-033 of 3 March, which added Bahrain, Djibouti, Kuwait, Oman and Qatar and re-drew the combined listed area to include the whole Strait; no JWLA-034 or revision after the July review was found. Seafarer casualties remain counted three ways and are never merged: USNI at least 19; UKMTO's year-to-date counter 25 injuries and fatalities; the IMO 17 confirmed as at 11 August. Iranian export data, two denominators, not averaged: Kpler via The National puts loadings FROM KHARG at 135,000 b/d in August against 1.98 mn b/d in February, a **93%** collapse; a second Kpler-attributed figure of 251,000 b/d covers ALL Iranian loading points. (!) A third figure, an Equiti Group estimate of 'roughly 1.5 to 1.8 million bpd' of current Iranian exports, is irreconcilable with both and appears to be a pre-blockade nameplate rather than an observed August rate; it is named and NOT used. NIOC's chief executive Hamid Bovard, via Nour News and carried by Reuters on 31 August, on the AI-generated video the President posted of Kharg being destroyed: 'Trump's tweets are laughable and conditions in Kharg are calm and appropriate.' Reuters reports no evidence Kharg was attacked and a US official saying the military had not targeted it; Vice-President Vance defended the post on 31 August as deliberate signalling.

A2.3 · CROSS-ASSET AND MACRO RECORD — FULL

A2.3.1 · The session that was Gulf-driven on a Fed-driven base

The 31 August session was read by every outlet that covered it as the weekend's military exchange transmitting through oil into a rate-hike repricing, on top of the base Chairman Warsh laid at Jackson Hole on 28 August. It was NOT read as a fresh Fed impulse and it was not data-driven.
Reuters, 31 August, 08:38 ET, under the headline 'Wall St set for lower open as Middle East clashes revive rate-hike speculation': 'The main U.S. stock indexes were on course to open lower on Monday after military strikes between the U.S. and Iran drove up oil prices, fanning inflation worries as the interest-rate outlook turns more hawkish' — and 'The losses could set the tone for September… and are likely to up the ante at the U.S. Federal Reserve's meeting next month.' Bloomberg the same day: 'Emerging-Market Stocks Fall as Warsh Stokes Fed Rate-Hike Bets'. Thomas Kikis of Standard Chartered on the keynote: 'He took any chance of a (rate) cut off the table… he brought about a level of monetary orthodoxy.' (!) PRESS LEVELS ARE NOT ADOPTED AND THIS EDITION has a fresh reason for the rule: one widely-syndicated 31 August market wrap prints a Dow close of 53,885.10 after a stated −464-point fall, which does not reconcile with the same day's intraday quotes elsewhere, and describes the 30-year as having 'climbed **5%**' where it plainly means basis points. This document publishes its own Bloomberg series and cites the press only for characterisation.

A2.3.2 · The data, and September pricing

Release	Reading	Date and status
Dallas Fed Texas Manufacturing Outlook Survey, August	**General business activity +11.6 from 1.3** — a 10.3-point RISE. New orders 22.0 from 6.4 (+15.6); production 16.1 from 10.1; capacity utilisation 12.8 from 5.9; company outlook 19.2 from 13.4. Employment FELL to 8.0 from 12.2. Prices paid for raw materials 44.1 from 41.3 — a 76th consecutive positive month against a 27.9 series average — and FUTURE prices paid 53.5 from 45.5, while wages and benefits DECELERATED to 21.1 from 30.8	31 August — IN WINDOW. Collected 18–26 Aug, 69 of 112 firms responding. Next release 28 September
Chicago Business Barometer (MNI/ISM-Chicago), August	47.1 from 57.6 — a 10.5-point COLLAPSE, first contraction in four months, lowest since December	28 August. (!) Carried here for the contradiction, not as new

Release	Reading	Date and status
ISM Manufacturing PMI, August	NOT YET PRINTED. July was **55.6%**, described in the ISM release as the highest reading since May 2022	1 September, 10:00 ET — **PROSPECTIVE**. It adjudicates between Chicago and Dallas
JOLTS (July), construction spending, S&P Global final manufacturing PMI	NOT YET PRINTED	1 September — **PROSPECTIVE**
Atlanta Fed GDPNow, Q3	**4.6%**, having run **5.0%** on 30 July and **6.2%** on 3 August	As of 26 August, per the Bank's own page metadata. The 1 September update lands roughly 12:00–13:30 ET, driven by the ISM and construction spending — **PROSPECTIVE**
September FOMC pricing	CME FedWatch: about **60%** at the 31 Aug open on Reuters' basis, against '**41.4%** a week ago', and **66%** by late morning on Forbes'. Kalshi: **47%** hike / **54%** hold. Polymarket: about **69%** for ANY 2026 hike, unrefreshed since 28 August	(!) THREE INSTRUMENTS, THREE UNIVERSES, NEVER AVERAGED (§9.19). No CME close for 31 August was obtainable. See the two corrections below. FOMC 15–16 September

TWO CORRECTIONS TO PRICING FIGURES THIS DOCUMENT PUBLISHED. (a) The Kalshi reading is **47%** hike and **54%** hold on Kalshi's own primary post, not the **48%** carried in the last two editions. (!) Those two legs of a single binary sum to **101%**; they are printed as Kalshi prints them and are NOT normalised to 100, because normalising would invent a number the venue does not publish. (b) The 28 August CME level is itself CONTESTED IN THE RECORD: **55.7%** on one CNBC citation and about **59%** on another, same tool, same day. This document has published the **59%**; both are now noted and neither is preferred. (!) Two further figures circulate and are NOT published: a '**62%**' Kalshi reading and a '**56%**' Polymarket reading for 31 August, neither of which could be tied to a dated source. The live Polymarket pages are JavaScript-rendered and returned nothing to a fetcher, which is a retrieval failure, not a reading. Calibration point for why these are never merged: on 9 August, after the July jobs miss, Kalshi priced hold at **65%**, Polymarket at **63%** and CME FedWatch at **55.6%** — the same contract, three venues, a ten-point spread.

The Dallas print is the analytically interesting one and it is NOT a growth story. Input costs accelerating into a 76th consecutive positive month, forward prices-paid at 53.5, and wages decelerating 9.7 points is a COST-PUSH and margin-squeeze signature, not a demand signature — which is precisely the transmission this monitor exists to trace. A respondent in computer and electronic products: 'Uncertainty happens in our industry when there is a risk of higher interest rates, contributing to a decrease in confidence among industrial customers and it delays projects tremendously.' (!) But Chicago fell 10.5 points on 28 August and Dallas rose 10.3 on 31 August. Two regional manufacturing surveys with overlapping fields, opposite signs and near-equal magnitudes ONE SESSION apart. That is flagged as an integrity problem and is NOT resolved here; the 1 September ISM is the test.

A2.3.3 · The Fed calendar, and why 3 September matters

NO Fed speech, testimony, press release or FOMC communication dated 29, 30 or 31 August exists. The speeches feed ends with Warsh's 28 August keynote; the press feed ends with a 27 August enforcement action; and the Board's own calendar carries exactly one entry across those three days, the G.20 statistical release. The forward calendar is the finding: Governor Michael Barr speaks at 9:05 ET on 1 September and Governor Christopher Waller gives a Reuters NEXT newsmaker interview at 8:30 ET on 3 September. The blackout runs Saturday 5 September to Thursday 17 September. Those are the ONLY two Board-level speaking slots before the FOMC, and Waller's is an interview format — he will be asked directly about a September hike six calendar days, four business days, after Warsh abolished forward guidance. The Beige Book lands 2 September and payrolls 4 September. Two additions to the hawkish record: the July FOMC vote was 9–3 with Beth Hammack (Cleveland), Lorie Logan (Dallas) and Neel Kashkari (Minneapolis) dissenting in favour of a **25 bp** hike, against a current target range of 3.50–**3.75%**; and Hammack told CNBC on 27 August 'I don't want to prejudge anything, but I believe now is the time to act' and 'I don't see any restriction in policy when I look at financial conditions'. The pre-Jackson-Hole hawkish cluster is Hammack AND Schmid, not Schmid alone.

A2.3.4 · Treasury supply, and a promised document that does not exist

NO coupon auction CLEARED in the window, so Threshold A gains nothing. (Threshold A turns on a clearing, not on a settlement.) The **$44**bn 7-year note (CUSIP 91282CRJ2) ISSUED on 31 August but was auctioned on 27 August and is already inside the five-auction record. Its internals were re-verified against primary Treasury data this edition and reconcile exactly: high yield **4.5120%**, coupon **4.500%**, bid-to-cover 2.50, allotment at the high yield **97.63%**. On COMPETITIVE-ACCEPTED of **$43.894**bn: primary dealers **12.26%**, directs **26.96%**, indirects **60.78%**. On TOTAL AWARD EX-SOMA of **$44.000**bn: **12.23%**, **26.89%**, **60.63%**. (!) The two bases are not interchangeable and a figure on one must never be compared with a figure on the other (§9.40). No tail is asserted: Treasury publishes no when-issued level, so a tail is structurally unobtainable from primary data (§9.39). Two BILL auctions did clear on 31 August and they are NOT a Threshold A input, but the composition is recorded because it is reachable and nobody prints it: the 13-week (**$92**bn, high rate **3.770%**, cover 2.77) took indirects at **51.98%** and dealers at **40.50%** on competitive-accepted; the 26-week (**$79**bn, high rate **3.885%**, cover 2.63) took indirects at **47.29%** and dealers at **43.42%** on the same basis, on the same afternoon. Six months of duration is where the bid thinned.

A NEW OPEN ITEM, AND IT IS A GAP RATHER THAN AN EVENT. Treasury release SB0607 of 19 August announced that the maximum long-end buyback size rises from **$2**bn to at least **$4**bn per operation 'effective September 9, 2026… through November 4, 2026', in the 10-to-20-year and 20-to-30-year nominal sectors, and closed by saying 'An updated tentative Treasury buyback schedule will be released at a later date.' That schedule has NOT been published. Eight days before the new regime begins, the operating calendar for it does not exist in the public record. NO buyback operation was conducted, announced or scheduled in the window, and the 4 November quarterly refunding is **PROSPECTIVE**. The September coupon block has not been announced either — expected 2 or 3 September on the usual cadence, so its absence is mechanics, not an anomaly, and NO calendar is inferred from it. Treasury release SB0618 of 31 August is the Preliminary Annual Report on U.S. Portfolio Holdings of FOREIGN Securities at year-end 2025. (!) That is the OUTBOUND leg and is NOT the TIC data on foreign holdings of Treasuries; it does not speak to foreign demand for US paper and is not used as if it did. Term-premium context, dated and sourced but not new: CNBC on 21 August reported long-dated yields rising 'as investor jitters over the Treasury Department's extended debt repurchase program and soaring national debt continued to hover over markets' — the buyback expansion being read as a signal of

STRESS rather than as relief, the reverse of its intended transmission — and the CBO has raised its annual deficit projection to **$2.1** trillion, **$200**bn above its February expectation. NO term-premium, long-end or foreign-demand commentary dated 31 August or 1 September was obtainable; that narrative did not advance.

A2.3.5 · War Powers — a statutory expiry into an empty chamber

This is a scheduling fact taken from primary sources and it corrects a premise this document had been carrying. The President's War Powers notification was dated 10 JULY 2026, following the 7 July strikes the letter describes as 'defensive' and 'limited'. Sixty days from 10 July is 8 SEPTEMBER 2026. The statutory 30-day withdrawal extension would run to 8 October. (!) The Senate is NOT back. Its own published floor schedule of 8 August provides for PRO FORMA SESSIONS ONLY on 31 August, 1 September, 4 September, 8 September and 10 September, and states that when it adjourns on 10 September it 'will next convene at 3:00pm on Monday, September 14, 2026'. No business is conducted in a pro forma session, so no privileged war-powers motion can be made and no floor vote can occur. 8 September is itself a pro forma day, at 1:15 p.m. The House DID return on 31 August, and took no war-powers action. Senator Schiff's resolution, co-sponsored by Kaine, Kim, Merkley and Van Hollen, has seen no movement: his press page across 19–31 August carries nothing on Iran or war powers. For context, the Senate has voted eleven times on Iran war-powers measures in 2026; the most recent was 23 July, when the motion to discharge S.J.Res.180 FAILED 47–49. The executive therefore reaches a statutory expiry with the chamber that would have to act mechanically unable to act until six days afterwards. That is a schedule, not a prediction, and it is published as one.

A2.3.6 · The SPR — two published values, still unreconciled, neither withdrawn

The conflict is unchanged for a fourth edition and both figures still stand. EIA's weekly series has the SPR at 289.7 million barrels for the week ending 21 August, released 26 August — down 3.7 million on the week, **40.6%** of the 714 mn bbl authorised capacity, and the lowest since 26 November 1982. The 26 August release was re-fetched on 1 September and is unchanged. The DOE Office of Petroleum Reserves 'SPR Quick Facts' page was re-read on 1 September and its own modified-time metadata still reads 24 August: it continues to publish 'Crude Oil Inventory by Site (as of August 20, 2026)' totalling 294.1 MMB across 61 caverns — Bryan Mound 142.5, Big Hill 89.1, Bayou Choctaw 32.0, West Hackberry 30.5, split 101.8 sweet and 192.3 sour. (!) The two dates are ONE DAY apart and the two totals 4.4 MMB apart, which is not a physically plausible one-day drawdown. They are DIFFERENT MEASUREMENT BASES — site-level physical inventory against weekly reported stocks — and under §9.45 the correct handling is to publish both with their series, vintages and publishers named, withdraw neither, and compute NO delta. Context that does NOT reconcile arithmetically and for which no reconciliation is asserted: 172 million barrels were ordered released in March 2026 and the reserve stood at 411 MMbbl on 31 December 2025, which would imply about 239 MMB against current readings near 290. The 2 September Weekly Petroleum Status Report is **PROSPECTIVE** and is the next chance to resolve this; it also carries the retail survey for the week to 31 August. Elsewhere on the supply calendar: the EIA Short-Term Energy Outlook is due 9 September; no September IEA Oil Market Report or OPEC Monthly Report has been published; and the eight-country OPEC+ group meets 6 September, having approved a +188,000 b/d September increase on 2 August that completed the rollback of the 1.65 mn b/d voluntary cut, with delegates telling Bloomberg the group expects to hold quotas steady for the remainder of 2026. NO pre-meeting guidance dated 29 August to 1 September was obtainable.

A7 · SOURCE LOG

Tier 1 = primary or official. Tier 2 = reputable wire or press. Tier 3 = state media or relayed claim, corroborated against Tier 1 before it is used for anything market-moving. **NOT OBTAINED** = sought and missed. **PROSPECTIVE** = relates to a session or publication that had not occurred at the Singapore cut, and is not a retrieval failure (§9.46).

Tier	Source	Used for
1 — market data	Tecity Bloomberg extract, *US Iran BBG Data.xlsx*, 1 September pull, 173 rows to 1 September 2026	ALL scored prices, yields, spreads, volatility and both gasoline series. No market figure in this document comes from the web
1 — maritime	JMIC Advisory Note Update 091, ICOD 301500 UTC, obtained as a primary PDF and read in full	The mine language, the threat levels, the 97 incident count, the 65 NCAGS and 9 S&P transit figures, the re-dated CENTCOM blockade tally and the held-vessel record
1 — maritime	UKMTO Warnings 122-26 and 124-26, both obtained as primary PDFs, 1 Sep	Both Khasab strikes. 122-26 CORRECTS the last edition: issued 30 Aug, source military authorities, vessel inbound, time-late
1 product, 3 route	UKMTO Advisory 123-26 (31 Aug) — content via a Tier 3 aggregator only; the primary PDF was **NOT OBTAINED**	The tanker / military-forces interaction east of Muscat. Flagged: no primary text was reached
1 — Jordan	Petra (Jordan News Agency), 31 Aug 06:41, Jordan Armed Forces spokesman	The eight intercepted missiles. (!) Petra does NOT name Iran, the targets or any base
1 — Iran	Iranian Ministry of Foreign Affairs statement, via Mehr, 31 Aug	Iran's own confirmation that it targeted US bases in Jordan, and the warning to states assisting US operations
1 — Gulf states	Qatar Ministry of Foreign Affairs statement, 31 Aug; UAE Ministry of Defence and Ministry of Foreign Affairs	The first Gulf-state attribution of this attack to Iran by name; the UAE denial that Al Minhad was targeted alongside its confirmation of engaging a UAV approaching from Iran
1 — military	@CENTCOM statements of 31 Aug relayed on the record; Capt. Tim Hawkins on the record 30 Aug; centcom.mil public-releases index read direct 1 Sep	The mine denial, the Larak justification, and the negative: no release since 15 Aug, no combat release since 29 July
1 — US policy	Federal Reserve Board speeches and press feeds and the Board calendar JSON, read direct; Treasury press-release index; api.fiscaldata.treasury.gov auctions query; Senate floor schedule of 8 Aug; ofac.treasury.gov recent actions	The Fed negative and the forward calendar, SB0607, SB0618, the 7-year and bill auction internals on both denominators, the pro forma schedule, and the OFAC negative
1 — US data	Dallas Fed TMOS August release; Atlanta Fed GDPNow page metadata; EIA WPSR highlights re-fetched 1 Sep; DOE SPR Quick Facts; gasprices.aaa.com read direct 1 Sep	The Dallas survey, the GDPNow vintage, both SPR figures, the EIA retail table and the five AAA series with the page's own date stamp

Tier	Source	Used for
1 — Oman	fm.gov.om Statements page read direct 1 Sep; the 25 Aug Oman–Iran joint statement read in full	The negative: nothing dated 30 or 31 Aug or 1 Sep, the last entry 29 Aug on Algeria. And the positive: the joint statement contains NO coordinates, NO fee schedule and NO revenue share
1 — freight	Baltic Exchange tanker report week 35, dated 28 Aug, re-verified against the Baltic's own page	TD3C at WS623 and the full route table. Week 36 is due 4 September
2	Reuters, Bloomberg, CNBC, AP, ABC, CBS, Fox, Al Jazeera, Stars and Stripes, USNI News, The National, Gulf News, Forbes, Kalshi News, Washington Post, TankerMap, IMF PortWatch	The damage-claim contradictions, the Trump and Bessent and Vance quotations, rate-odds characterisation, transit counts, Kharg export figures
3 — RELAYED	IRNA (Qeshm governor, 31 Aug; Makizadeh, 31 Aug); IRIB and Fars via Western press; Tasnim (28 Aug); Nour News via Reuters (31 Aug)	The Larak casualty figure, the bulk-carrier seizure, the 'heavy damage' assertion, the Khamenei message text and the NIOC statement. NONE moves a probability on its own, and the 'heavy damage' claim is contradicted by every non-Iranian source

NOT OBTAINED — checked and missed, with the query stated (§9.23c). Any US, CENTCOM, Pentagon or Jordanian battle-damage assessment, casualty figure or interception count for King Hussein and Al-Azraq — CENTCOM did not respond to Stars and Stripes and issued nothing; only Jordan's own count of eight exists. Any US battle-damage assessment for Larak. Any US acknowledgement of the IRGC's claimed shoot-down of a US drone over the Strait. Any US strike inside Iran dated 31 August or 1 September. Any mine count, clearance update or allied government comment on Bloomberg's 80–150 residual estimate — neither updated nor retracted since 28 August. JMIC Update 092 — a guessed path returned an empty body; the cadence implies about 2 September. UKMTO Warnings 125-26 or 126-26 — the 2026 warnings index fetches but returns 'No products to display' because it is client-hydrated. The vessel name, IMO, flag and crew nationality of the bulk carrier Iran claims to have seized on 31 August — Iranian authorities expressly declined to disclose flag or crew. Any AMARA release, movement, charge or position report dated 20 August to 1 September. Windward's Hormuz brief (latest 19 August) and any LSEG transit figure. Any named, dated broker war-risk quote for 29 August to 1 September. Any Iranian corridor statement after Gharibabadi on 29 August; any Omani publication after 29 August; any readout of the Qatari PM's 27 August Tehran visit from either government; any US negotiations statement after Leavitt on 27 August; any trace of Witkoff. Any OFAC action or Iran-related Treasury release dated 29, 30 or 31 August or 1 September. Any UAE decree, cabinet resolution or gazette text for the embargo announced 18 August — FOURTEEN days elapsed with no legal instrument of any kind; every report still traces to a single unnamed ministry official. Any development in the Banque Misr UAE Section 311 NPRM or the UAE central-bank probe after 30 August. Any CME FedWatch close for 31 August; any dated Kalshi or Polymarket reading for 31 August or 1 September — the live Polymarket pages are JavaScript-rendered and returned nothing. (!) §9.50, established below, binds on this one too: this negative is METHOD-BOUND and the method was NOT varied this edition. It is recorded as such rather than as a second clean miss, and varying it is a task for the next edition. Any term-premium, long-end or foreign-demand commentary dated 31 August or 1 September. Any content whatsoever dated 1 September 2026: every tracker checked terminates on 31 August, and the US session of 1 September had not begun at the cut.

§9.50 — A NEW PITFALL, AND IT CORRECTS ONE OF THIS DOCUMENT'S OWN NEGATIVES. The 31 August edition recorded UKMTO as **NOT OBTAINED** after probing six listing URLs, and correctly said under §9.23c that absence there was not evidence of absence. It was right, and the reason is now known: the listing pages are client-hydrated and will NEVER serve product to a fetcher, but the underlying media PDFs fetch normally once the file revision token is known, and search-engine indexing surfaces those tokens. By that route this edition recovered TWO Tier 1 UKMTO warnings and one Tier 1 JMIC update, one of which **CORRECTED** the provenance of a warning the last edition had to carry on a Tier 2 relay. (!) The operational rule: a **NOT OBTAINED** on a JavaScript-rendered site is a statement about the METHOD, not about the source, and the method must be VARIED before the same negative is published a second time. Repeating a method-bound negative unchanged is how a retrieval failure hardens into an assertion.

§9.13 RE-VERIFICATION OF INHERITED CLAIMS — the suspended clock is **RESOLVED** and retired. The 31 August edition SUSPENDED this document's own 'Khamenei silent a sixth day' clock pending primary corroboration, rather than assert a correction on two Tier 2 items. The corroboration now exists across three tiers and there is no rebuttal from any. **TIER 1**: President Trump, 26 August, named MOJTABA Khamenei as the incumbent Supreme Leader and said he does not believe he is dead — 'He was very seriously wounded… The left side of his body, the arm, the leg, the whole thing' — carried by Anadolu, TASS, the Jerusalem Post and CNN. **TIER 3**, and it is the Iranian-state corroboration that was being sought: Tasnim published the message attributed to Mojtaba Khamenei on 28 August, and Mehr released an undated sub-fifteen-second video of him on 10 August. TIER 2, independent of The National: Al Jazeera on 12 and 20 March, NBC, TIME on 21 April and Iran International on 12 March have all carried the succession, dated 8 March 2026, since the spring. THE FRIDAY/SUNDAY CONFLICT ALSO RESOLVES: there were TWO messages. 28 August 2026 was a Friday and 30 August a Sunday; Tasnim independently dates the 'imaginary dualism' message to 28 August and The National's 28 August piece anchors it to a same-evening Pezeshkian broadcast. The 30 August article folded that Friday message into a separate Sunday Unity Week message and mis-dated it. The dualism line belongs to FRIDAY 28 AUGUST. (!) The clock this document carried was therefore measuring the wrong thing, and it is **RETIRED** rather than repeated or restated at a new number. And a Tier 1 negative of its own is worth recording alongside: english.khamenei.ir, read direct on 1 September, is FROZEN: its dateline reads 1 January 2026 and nothing later than that is published — no succession announcement, no biography change, no war-period message archive. The Supreme Leader's own official platform has published nothing since two months BEFORE the war began, and the office issued nothing on either the Larak strike or the retaliation.

A8 · ON-DEMAND UPDATE PROTOCOL

#	Step	Detail
1	Refresh and verify the extract	**Never build an edition off a stale extract (§9.22)**. Check the file mtime AND parse the sheet. This edition: the extract carries a 1 September row against the 31 August row the last edition ran on, and the 31 August row has settled into a genuine close. It is fresh.
2	Parse with a dynamic header scan	**Column indices move between uploads**. Auto-detect the Brent and WTI front month and take whatever label the header scan returns for DXY. Re-verify the 27 February anchor field by field — done this edition, unchanged on all seventeen fields.

#	Step	Detail
3	Run all THREE integrity checks	Row-level (§9.8), field-level identical-value at the precision each series is published to (§9.35, §9.48), and the continuation-versus-active BASIS check (§9.41). This edition: ALL THREE **CLEAR**, the first clean sweep in three editions — and the basis check clears as a POSITIVE result, a stable non-zero basis on both sides of the roll being the evidence that the 31 August step was a roll and not a second restatement.
4	Run the backfill check in BOTH directions	§9.10: yesterday's dark cells must be re-examined, not carried, and a backfill is as likely to run against a trend as with it. This edition it fired on four cells and two were consequential: MOVE backfilled at **75.32** and ENDED a nine-close run below 75, removing a downgrade leg; AUTMUSAG backfilled a cent BELOW the value being carried. Asia LNG, VIX and SOFR also backfilled and changed nothing.
5	Compute deltas and test every trigger	d/d, w/w five rows back, and versus pre-war; explicit trigger tests for the four market channels plus Stage-4 A, B and C. Run min, max and last-prior-occurrence on the full column before writing ANY superlative (§9.32) — it is what established two **war-high closes** and a war-record TTF close this edition, and what stopped the 2-year and the 30-year being written as records when neither is.
6	Verify the news, and re-verify what was inherited	**Every claim needs a named source and an exact date, and negative claims decay fastest of all (§9.23)**. State the exact query behind every negative. Say **NOT OBTAINED** rather than estimating, and distinguish **NOT OBTAINED** from **PROSPECTIVE** (§9.46). VARY THE RETRIEVAL METHOD before repeating a method-bound negative (§9.50) — doing so recovered three Tier 1 maritime documents this edition and retired a suspended clock.
7	Build, then QA in three passes	A numeric harness against the dataframe; an adversarial PROSE pass by a reviewer with no access to the source data, run TWICE because fixing introduces defects (§9.42); and a VISUAL render, which is not optional (§9.43). Re-run the numeric harness AFTER the prose fixes. Balance the bold tags in every fragment after every edit (§9.42a).
8	Deliver both documents	**The edition and the annex go into the project root together**. A file that is not committed never reaches the reader. The annex does not go into the dashboard PDF folder, because the score-history script regexes a score sentence out of every PDF there and the annex has none.

A9 · METHODOLOGY

Six channels, each scored 0–5, summed to 0–30. Bands: 0–7 watch; 8–14 stress; 15–21 systemic-risk watch; 22–30 crisis. Maritime denial and escalation risk are event channels; oil, US inflation impulse, Treasury stress and political stress are market channels scored on confirmed closes.

(a) Confirmed closes only for market channels. No market channel moves on an intraday print. The 1 September snapshot in this document moves nothing — including two more war-high yield prints, a TTF mark above the **record close** set the day before, and 5y5y ticking back up to **2.2947%**. (b) Hysteresis. Upgrades fire on a sustained break; downgrades require a sustained reversal past a wider threshold. It faces its sharpest test of the war: the 5y5y forward has now closed BELOW its own firing level on TWO CONSECUTIVE sessions — 28 and 31 August — where the two earlier breaks, 13 and 25 August, were each retraced inside one session. The channel holds at 5 because the documented downgrade is **14.65 bp** lower, and the rule is NOT moved to meet the trigger (§9.16, §9.26). (c) The scale saturates in BOTH directions (§9.7, §9.27). FIVE of six channels are at the cap. This edition is the reference case for both halves at once: the score could not register an Iranian ballistic-missile attack on American bases in a treaty partner, and could not register two new war-high Treasury closes on the same day either. A flat 27 is an instrument at its stop.

Rules exercised this edition, named so the reader can audit them. §9.8, §9.35 and §9.41 — all three **CLEAR**, and §9.35's own structural caveat is restated anyway: a clear §9.35 is never an all-clear on the data, because it cannot see a whole-column restatement. §9.10 — the two-way backfill test, fired twice and decisive once. §9.11 — an announcement is not an event, applied symmetrically: neither JMIC 091's re-publication of active mine danger areas nor CENTCOM's mine denial moved the maritime channel. §9.15 — STATED IN FULL BECAUSE IT DOES NOT APPLY, FOR A **THIRD CONSECUTIVE** SESSION: where a channel has two downgrade legs, it is only nearing a downgrade when BOTH legs move toward it in the same session; legs moving in opposite directions are ROTATING, and rotation is not approach. On 31 August both Treasury legs moved AWAY and one was **LOST** OUTRIGHT — the third state, first recorded 21 August, now in its FOURTH occurrence and its THIRD consecutive one. §9.19 and §9.24 — nine transit universes, every denominator named, none spliced or averaged, including the 65 and the 9 that sit inside a single JMIC document for the same three days. §9.23 — every negative names the page checked and the date range. §9.26 — the twice-broken firing trigger is led with, not footnoted, and the rule is not moved. §9.30 — the scored gasoline series is dark and no trend is read through it. §9.31 — the snapshot missed the whole US session in ONE direction on all but three fields; one reading is withdrawn BY NAME in A1.2 and four more are marked **SUPERSEDED** rather than withdrawn, while one is expressly neither. §9.32 — every superlative bounded and checked against the full column: the 10-year and 5-year ARE **war-high closes** and the TTF close IS a war record, while the 2-year is written as fourth-highest and the 30-year is NOT written as a record because **5.3060%** on 17 August stands. §9.36 and §9.41 — both oil bases quoted and no d/d constructed across the roll, however clean the basis now looks. §9.39 and §9.40 — Threshold A untestable as written, no tail asserted, and every auction allotment published with its denominator named on BOTH bases. §9.43 — a visual render was run before delivery. §9.46 — the 1 September ISM, JOLTS and GDPNow, the 2 September WPSR and Beige Book, VRA Overview No. 5 on 4 September, Baltic week 36 on 4 September and the 6 September OPEC+ meeting are **PROSPECTIVE** and are kept out of the **NOT OBTAINED** register. §9.50 — new, and it corrected one of this document's own negatives (A7).

§9.51 — NEW. WHEN A DEFECTIVE TEST IS MET A SECOND TIME BY A DIFFERENT MECHANISM, RECORD THE MECHANISM, NOT A VERDICT. §9.49 recorded Threshold B's 28 August arming as a DEFECT: a long-end stress test tripped by an **11.14 bp** front-end move in which the 30-year contributed **1.25 bp** — a bear flattener, the opposite of the term-premium blowout B exists to catch. On 31 August B HELD, and this time on a bear STEEPENER in which the 30-year contributed the largest move on the curve: the exact signature B was written to detect, with both legs widening. (!) The temptation is to read the second session as vindication and close §9.49. That would be wrong, and the reason is the whole point. One arming was defective and the next was clean, and the WRITTEN TEST WAS MET IDENTICALLY IN BOTH CASES. A test that returns the same answer for two opposite curve signatures is not discriminating between them — which is precisely the original complaint. A second, cleaner occurrence is not evidence about the test; it is a second observation of the same non-discrimination. The open question is unchanged and is not settled here: whether B should be conditioned on a long-end CONTRIBUTION rather than a long-end LEVEL (§9.33, §9.36d, §9.39 are the precedents for restating a test rather than quietly re-reading it).

Restatements and comparability. Vendor restatements are normal and make absolute levels non-comparable across editions, though directional analysis is continuous. A contract roll does the same thing to a continuation series silently, which is why the basis check is a standing check. This edition it cleared, and a stable non-zero same-signed basis on both sides of the 31 August step is the affirmative evidence that the step was the roll and not a second restatement — but §9.36 still forbids any day-on-day change across that boundary on the active series. The dual gasoline series is never re-based: AUTMUSAG is the scored reference and preserves the **$3.52** anchor and the **$4.75** trigger; USRFRUSA is corroboration only; AAA's published regular headline is a third series and is never compared with either. The pre-war anchor is the 27 February 2026 close, re-verified field by field every edition; it is unchanged to date. THREE OPEN ITEMS REMAIN DISCLOSED RATHER THAN DECIDED. (1) The oil channel's downgrade is written as a mediated pause AND 'a close' at or below **$72.48,** while its upgrade requires a SUSTAINED break — as written the downgrade is easier to trip than the upgrade, which inverts (b). It is **$15.89** away and not live, so the asymmetry is disclosed rather than settled under time pressure. (2) Threshold B's long-end LEVEL versus long-end CONTRIBUTION question, per §9.49 and §9.51. (3) NEW AND RISING: the US-inflation channel is scored at its maximum on a trigger that has now failed on two consecutive closes, with the documented downgrade **14.65 bp** lower. A third consecutive close below **2.30%** would make the distance between the firing rule and the downgrade rule the largest open methodological problem in this document, ahead of Threshold B. It is flagged now so that it is not discovered late.

A10 · ANCHOR AND TRIGGER LEVELS

A10.1 · Pre-war anchor — 27 February 2026 close, re-verified this edition, unchanged

Brent	WTI	2Y	5Y	10Y	30Y	2s10s	5y5y	10y BE	MOVE	VIX	DXY	Gasoline AAA	Gasoline DOE	Henry Hub	TTF	Asia LNG
$72.48	**$67.02**	**3.3749 %**	**3.5017 %**	**3.9375 %**	**4.6106 %**	**+55.64 bp**	**2.142 %**	**2.2569 %**	73.38	19.86	97.608	**$3.52**	**~$2.94**	**$3.063**	**€31.23**	**¥1,669**

A10.2 · Live trigger state on the 31 August close, with events to 1 September

Channel	Score	Upgrade	Downgrade	Distance
Maritime denial	5	At max	Verified reopening AND traffic above **25%** of normal for 10 sessions	**THE TRAFFIC LEG DID NOT ADVANCE AND THE REOPENING LEG MOVED AWAY**. UKMTO VRA Overview No. 4 remains the current edition and No. 5 is **PROSPECTIVE**, due 4 September, so the 22–**23%** AIS-plus-dark reading is unchanged — and a seven-day aggregate cannot satisfy a ten-session test in any case. (!) The REOPENING leg moved AWAY on allied paper: JMIC Update 091, ICOD 301500Z, keeps mine danger areas 'still active' and clearance operations continuing, flagged '(No change)', TWO TO THREE DAYS after the CENTCOM commander declared the routes clear. Two further Khasab strikes, 29 and 31 August, neither inside the 97 count
Oil price shock	2	Brent above **$95** sustained → 3	Mediated pause AND a close at or below **$72.48** → 1	Upgrade **$6.63** on the scored CO2 series, NARROWED from **$6.90** — the sixth narrowing in ten readings. Downgrade price leg **$15.89,** WIDENED from **$15.62.** (!) The active contract closed **$90.49** and sits **$4.51** from **$95**: a DIFFERENT DELIVERY MONTH after the roll, NOT the scored figure, and NOT comparable with any pre-31-August figure. The four active-basis distances published before the roll remain **WITHDRAWN**
US inflation impulse	5	At max	5y5y sustained at or below the **2.142%** anchor → 4	**14.65 bp**, NARROWED from 15.44, and STILL the nearer of the two market candidates — by a WIDENED margin, 14.65 against Treasury's 24.23, from 15.44 against 20.56. (!) 5y5y closed **2.2885%**, below the **2.30%** that fired the upgrade for a **SECOND CONSECUTIVE SESSION** and the lowest close since the upgrade fired on 31 July. The two prior breaks, 13 and 25 August, were each retraced in one session. BE10 moved the OTHER WAY, to **6.37 bp** above its anchor from 6.10
Treasury stress	5	At max	30-year close below **5.00%** WITH MOVE below 75, sustained → 4	**BOTH LEGS ARE NOW UNSATISFIED**. The volatility leg is **LOST**: MOVE closed **75.32**, ending the run of NINE consecutive closes below 75 (18–28 Aug) and only the second close at or above 75 since 12 August. The yield leg fails by **24.23 bp**, WIDENED from 20.56. BOTH LEGS MOVED AWAY TOGETHER for a THIRD consecutive session, and this time one was lost outright rather than narrowed — the fourth occurrence of the third state of §9.15
Political stress	5	At max	Three consecutive AUTMUSAG closes at or below **$4.60** with no intervening print above **$4.70** → 4	21 cents, **UNRESOLVED**. Last **RESOLVED** print **$4.81** (28 Aug), **BACKFILLED** one cent BELOW the **$4.82** being carried; DARK on 31 August and 1 September (§9.30, §9.10). Corroborating evidence still points down — AAA regular **$4.0807** and diesel **$5.6002,** both below week-ago — but the scored series has not printed for two sessions

Channel	Score	Upgrade	Downgrade	Distance
Escalation risk	5	At max	Mediated stand-down AND talks resume → 4–3	**BOTH LEGS MOVED FURTHER AWAY**. Iran fired ballistic missiles at the King Hussein and Al-Azraq air bases in Jordan on 30–31 August — corroborated by Jordan's, Iran's and Qatar's own ministries — and separately CLAIMED a drone attack on Al Minhad, which the UAE **DENIED** while confirming it engaged a UAV approaching from Iran. The President promised retaliation and had not delivered it at the cut. The talks leg: Qatar moved from mediator to critic in four days, and Leavitt's 27 August 'no negotiations' stands unretracted
Stage-4 A	—	A failed coupon auction	n/a	**NOT ARMED — UNTESTABLE AS WRITTEN (§9.39)**. Treasury publishes no when-issued level, so a tail can never come from a primary source. NO coupon auction CLEARED in the window; the **$44**bn 7-year SETTLED on 31 August but was auctioned 27 August, and Threshold A turns on a clearing. Its internals re-verified against primary data and reconcile exactly: high yield **4.5120%**, cover 2.50, dealers **12.26%** on competitive-accepted and **12.23%** on total award ex-SOMA. The five-auction dealer run is unchanged at 12.34, 2.09, 10.90, 10.05 and 12.264, and **12.264%** remains the SECOND-highest
Stage-4 B	—	30-year above **5.20%** WITH 10-year above **4.65%**	n/a	**ARMED, and it HELD a SECOND close with BOTH legs WIDENING**. 30-year **5.2423%**, clearing by **4.23 bp** against 0.56 at the arming; 10-year **4.7500%**, clearing by **10.00 bp** against 6.80 — its widest clearance of the regime. **ORDINALS UNCHANGED** and this is not a new state: six armings, five lapses, ELEVEN states and TEN changes since 29 July. (!) §9.49 stays OPEN: B armed on a bear flattener and held on a bear steepener, and a test met identically by two opposite signatures is not discriminating between them (§9.51)
Stage-4 C	—	MOVE above 130	n/a	NOT ARMED. **75.32** — 54.68 points below C and 39.70 below the 115.02 war high of 26 March. (!) But the structure CHANGED: MOVE is now 1.94 points ABOVE its 73.38 pre-war anchor while the 30-year sits **63.17 bp** above its own, so BOTH halves are on the same side of their anchors for the first time since 17 August. THE COMPOSITE FIGURE IS **RETIRED**, NOT UPDATED: 61.91 on 28 August was the SUM of two deviations in OPPOSITE directions, and that construction is undefined once both sit on the same side. Publishing a successor would be arithmetic without a referent. The two deviations are reported separately from here — **63.17 bp** and +1.94 — and the finding is that the anomaly closed because volatility ROSE to meet the yield, not because the yield came back
