ANNEX · 4 SEPTEMBER 2026

This annex is the companion to the 4 September 2026 edition and is built every day. The edition is capped at eight pages; material is RELOCATED here, never deleted. Section numbering tracks the edition: **A1** carries the full commentary for the live-tape tables and the gasoline chart, the full strait-operational record and the freight and war-risk record; **A2.3** the full cross-asset and macro record, the war-powers schedule and the SPR withdrawal; **A7** the source log; **A8** the on-demand update protocol; **A9** the methodology; **A10** the anchor and trigger levels. **A figure marked NOT OBTAINED — or, equivalently, NOT FOUND — was sought and missed, and is absent from the record rather than unchanged. A figure marked PROSPECTIVE relates to a session or publication that had not occurred at the Singapore cut and is not a retrieval failure (§9.46).**

A1 · LIVE TAPE — FULL COMMENTARY

A1.1 · Data integrity — §9.8, §9.35 and §9.41 all CLEAR

§9.8, the ROW-level check: **CLEARS**. The 3 September row is a genuine close. ALL FOURTEEN tape fields the last edition published as a 3 September intraday moved on settlement — Brent by –**$0.45**, TTF by –€2.39, the 2-year by –**3.12 bp** — and the row additionally carries MOVE at 74.68 and VIX at 14.32, both blank at the 3 September cut. Fourteen of fourteen leaves no doubt the row refreshed.
§9.35, the FIELD-level identical-value check: **CLEARS** on every field, with no flag raised and none outstanding. No value on the 4 September row is identical to four decimal places to the 3 September close. The nearest approach is the 5-year at 4.5146 against 4.5144 — two units at the fourth decimal, in a row where every other tenor moved — and that is the surviving half of §9.25: a NEAR-identical value in a live row is a market that has stopped moving, not a carry. The failure mode §9.35 exists to catch is EXACT equality. (!) The STRUCTURAL BLIND SPOT is restated every time the check is run: §9.35 is a DAY-ON-DAY test and cannot see a restatement that moves a whole COLUMN across many sessions at once (§9.47, §9.48). It was run at each series' own published precision (§9.48).
§9.41, the BASIS check: **CLEARS**, a positive result for a fourth consecutive edition. The Brent continuation-to-active basis printed 0.00 through 28 August and then 2.12, 3.08, 3.54 and 3.89 on 31 August and 1–3 September, having stepped off twenty consecutive sessions of exactly zero at the 31 August roll, and marks 4.01 on 4 September. A basis that widens smoothly, with no sign change and no second step, is what a correctly-rolled pair looks like when the term structure is moving; a restatement would show as a step. WTI matches in SHAPE — 1.70, 2.47, 2.73, 3.27 — off its OWN 21 August roll, and two independent contracts agreeing is stronger evidence than either alone. (!) The corollary is now at its sharpest and it changes what a rule MEANS, not what a number is: on the 3 September close the **$95** trigger sits above one Brent series and below the other for a **SECOND** consecutive session, and on the active series two consecutive closes is a sustained break by this document's own definition. §9.36 forbids constructing anything across the boundary. **It is stated at §2.1 and §9.56 and is NOT resolved here.** No new restatement was found: the 1 and 2 September closes reconcile field by field against what the last two editions published for them on every scored series.
§9.10, the two-way BACKFILL test: fires on THREE cells — MOVE and VIX for 3 September, and AUTMUSAG for 2 September — and TWO are consequential. AUTMUSAG's 2 September cell, reported DARK yesterday, has printed at **$4.90**, four cents ABOVE the **$4.86** carried as last resolved: a **FOURTH** consecutive rise and the highest print since 2 June. It is NOT a **war high** — **$5.18** on 20 May stands (§9.32) — and the political channel's distance to its downgrade WIDENED again, to **30 cents** from 26. MOVE printed 74.68, which is not a correction but a change of STATE arriving in a cell recorded as dark: it restores the Treasury downgrade's volatility leg. (!) §9.10 has now fired UPWARD on the scored gasoline series in FOUR consecutive editions, the last three at **$4.83**, **$4.86** and **$4.90** — against a downgrade case that was live a fortnight ago, which is precisely why §9.30 forbids reading a trend through dark cells. (!) SOFR did NOT backfill for 3 September, breaking a run of two editions in which it did; it is dark for a second session with 3.65 (2 Sep) as last resolved, and its absence is recorded rather than filled.

A1.2 · Reconciliation of the 3 September snapshot — one-directional and DOWNWARD for a THIRD consecutive edition

The Singapore-morning cut of 3 September preceded the entire US session — which contained jobless claims, ISM Services, the July trade report and the Vance briefing — and once again almost every field moved the same way (§9.1, §9.31). ELEVEN of fourteen fields settled BELOW the mark, and the three exceptions are 2s10s, BE10 and the 5y5y — all three of them SPREADS or FORWARDS rather than outright levels, which is a cleaner split than the last two editions produced and is worth recording as such. (!) This is the **THIRD** consecutive one-directional reconciliation and the **SECOND** consecutive downward one. **§9.17 nonetheless binds: the error is regime-dependent, three in a row is not a rule, and no field is being modelled off this pattern. NO field is excluded: §9.35 raised no flag, so §9.37 does not engage and all fourteen gaps are computed.**

Field	Published 3 Sep snapshot	3 Sep settled close	Gap
Brent CO2	92.08	91.63	–**$0.45** — and it is the difference between an upgrade **$2.92** away and one **$3.37** away. (!) The snapshot again flattered the scored channel, and the settled distance WIDENED rather than narrowed
Brent COA (active)	95.75	95.52	–**$0.23** — MEASURED, both sides post-roll. (!) It settled THROUGH **$95** anyway, for a **SECOND** consecutive close, so the finding does not depend on the snapshot in any way
WTI CL2 / CLA	88.46 / 91.32	88.03 / 91.30	–**$0.43** / –**$0.02** — (!) the active contract settled within two cents of its own morning mark while its continuation fell 43. The basis did the moving, not the price
Henry Hub / TTF	3.018 / 74.200	2.913 / 71.810	–**$0.105** / –€2.390 — the largest gap in this table. (!) Henry Hub breaks its two-edition run of moving AGAINST the direction and joins it. The TTF snapshot was an intraday ABOVE the 2 September record close; it settled €1.824 BELOW it, so the record was NOT extended and the snapshot would have said it was
Asia LNG	no print	3,960	(!) NOT a gap but a BACKFILL, and it arrives as a WAR RECORD — the twelfth — in a cell published as dark. §9.10
DXY	99.534	98.908	–0.626 — the second-largest gap. The snapshot had a modest slip; it settled as the largest dollar fall in a fortnight
2-year	4.3672	4.3360	–**3.12 bp** — the largest gap on the curve, and in the same direction the curve was already moving

Field	Published 3 Sep snapshot	3 Sep settled close	Gap
5-year / 10-year	4.5304 / 4.7761	4.5144 / 4.7680	–1.60 / –**0.81 bp** — both settled lower and neither approached its 1 September **war high**
30-year	5.2518	5.2465	–**0.53 bp** — the SMALLEST gap in the table. (!) Computed without qualification: the field is certified and §9.37 does not bar it
2s10s	40.682	42.788	+2.106 — the largest gap in the table on any basis. The snapshot had the curve barely steepening; it steepened to its widest since 27 August
10y BE / 5y5y	2.3485 / 2.3081	2.3539 / 2.3154	+0.54 / +**0.73 bp** — both settled HIGHER, and the 5y5y's margin above **2.30%** nearly doubled as a result. (!) The snapshot understated the strength of the finding

ONE FINDING FROM THE 3 SEPTEMBER EDITION IS **WITHDRAWN** BY NAME (§9.20, §9.31), and it is a NEWS finding rather than a market one. **The last edition recorded 'no fresh wave from either side on 2–3 September, the first two-day gap in a fortnight'.** The Iranian half is false. In the early hours of 3 September Iran struck Ahmad al-Jaber air base in Kuwait and claimed Al Minhad in the UAE, and the Kuwaiti army stated on the record that its air defences were engaging — **TIER 1**, host-government, not an Iranian relay. The American half SURVIVES and is strengthened: no US wave followed on 2, 3 or 4 September, a three-day gap. (!) The lesson is §9.23's: an absence-of-evidence claim decays faster than a positive one, and 'neither side acted' is TWO negatives, each of which must be re-checked separately against the party that would have acted. One was checked against CENTCOM and held; the other was not checked against the Gulf states and did not.

TWO FURTHER WITHDRAWALS, both of carried third-party material (§9.19). (a) The Lloyd's List figure of 108 transits for 17–23 August, +**27%** w/w, is **WITHDRAWN**. It could not be re-sourced on a direct check this edition, and no restatement of it was found either; an unsourceable transit count is removed rather than repeated, exactly as the 114 / +**30%** it itself replaced was removed. No Lloyd's List transit series is carried in this edition. (b) The description of AUTMUSAG as 'AAA all-grades retail pump' is **WITHDRAWN** as unverified — see A1.5, where the reconciliation is opened as a standing item. TWO statements are **SUPERSEDED** rather than withdrawn, the distinction kept because they were true when written: (a) 'no JMIC Update 093 was issued' — it has since been issued, ICOD 031500Z; and (b) 'the SPR replacement is DOE-sourced with an unresolved data date' — it is now confirmed as EIA-sourced and dated (A2.3.6).

A1.3 · Energy, gas and the physical record — full commentary

Brent CO2 closed **$91.63**, –**$0.46**, the first fall in four sessions, leaving the **$95** upgrade **$3.37** away. The full edition-over-edition sequence is 9.78, 8.43, 5.55, 5.21, 3.03, 7.73, 8.06, 6.48, 6.90, 6.63, 3.43, 2.91, 3.37 — THIRTEEN readings, eight narrowings and four widenings across twelve transitions. **$2.91** remains the narrowest of the thirteen and it belongs to the LAST edition, not this one; this reading moved AWAY. The downgrade leg is **$19.15** above **$72.48**. WTI CL2 closed **$88.03**, –**$0.25**, so both scored crude legs fell together. (!) The ACTIVE contracts went the other way: COA –**$0.11** to **$95.52** but CLA +**$0.29** to **$91.30**, and on the 4 September morning mark COA prints **$95.81**. Screen quotes for 'Brent' circulating this week refer to the ACTIVE contract; no SCORED price in this document is taken from the web (§3), and web quotes are not reproduced even as corroboration because they would invite exactly the splice §9.36 forbids.

THE ACTIVE CONTRACT HAS NOW CLOSED THROUGH **$95** TWICE IN SUCCESSION, AND TWO CONSECUTIVE CLOSES IS THIS DOCUMENT'S OWN TEST OF A SUSTAINED BREAK. COA settled **$95.63** then **$95.52**; CO2 settled **$92.09** then **$91.63**. The two-close rule is not an abstraction here — it is the specific test that fired US-inflation 4→5 on 31 July after two closes above **2.30%**, and the test that cut oil 2→1 on 3 July after two sub-anchor closes, and on both occasions this document refused to act on the first close alone. Applied to COA the oil upgrade fires; applied to CO2 it is **$3.37** away and receding. (!) Bound the superlative before writing it (§9.32). This is NOT the active contract's first close above **$95,** nor its first pair: it has closed above **$95** twenty-six times in this war, the last consecutive PAIR being 20–22 May (a run of three) and the last single close 3 June at **$95.14**. The defensible statement is the first back-to-back closes above **$95** since 22 May. The scored continuation has not closed above **$95** since 24 July. §9.36 forbids reading the two as one series and §9.26 forbids resolving the ambiguity toward whichever series would fire the upgrade. **It is NOT resolved here; see §2.1 and §9.56.**

Asia LNG set a twelfth war record while European gas gave one back. Japan/Asia LNG closed ¥3,960, +16, a **NEW WAR-RECORD CLOSE** — the **TWELFTH** — taking out the ¥3,944 of the previous session and reaching +**137.3%** against its ¥1,669 pre-war anchor, the largest pre-war multiple anywhere on this tape. It arrived as a BACKFILL into a cell the last edition published as dark (§9.10). Dutch TTF closed €71.810, –€1.824, ENDING the run of three consecutive record closes; €73.634 of 2 September stands as the record and this is the third-highest close of the war, +**130.0%** vs pre-war. (!) A cross-check on the record framing, and it cuts against the obvious wording: external reporting describes European gas as at its highest since January 2023 — a three-year high, NOT an all-time high, the 2022 peak being far above. This document's '**war-record close**' means a record SINCE 28 FEBRUARY 2026 on the TZTA series and has never meant an all-time high; the distinction is stated here so the two cannot be conflated. Henry Hub FELL **4.3 cents** to **$2.913** and its discount to pre-war WIDENED back to **4.90%** from **3.49%**. (!) The control reasserted itself: last edition recorded American gas beginning to follow and narrowing to within **1.47%** on the mark. It did not follow. US gas remains BELOW where it started this war while Asian gas sets records and European gas trades within €1.83 of one — the cleanest single piece of evidence that this is a Hormuz and LNG-routing shock rather than a global energy shock.

The refined-product record is again the sharpest corroboration and again it is not in crude. EIA's week to 28 August has distillate stocks **14%** BELOW their five-year average against gasoline **6%** below, with refineries at **98.0%** utilisation and crude runs of 17.5 mn b/d — a system with no spare capacity to answer a middle-distillate shortage. AAA diesel is **3.27 cents** from its **all-time record** (A1.5). A chokepoint that lengthens voyages and strands middle distillates hits diesel before gasoline, and the retail series show exactly that. (!) The §9.28 import test resolves for a second time and it has NOT reverted. EIA crude imports rose 612,000 b/d to 6.8 mn b/d with a four-week average of 6.7, **2%** above year-ago, against the 6.3 four-week average that framed the test in mid-August and the 6.6 at which the 20 August edition recorded reversion. Commercial crude nonetheless FELL **4.5 mn bbl** to 424.5 mn. Barrels that cannot reach Asia are still being landed on the US Gulf Coast, and the July trade deficit widening **$17.4**bn to **$88.6**bn on a **$10.8**bn ALL-GOODS import surge is CONSISTENT with it, on a far wider universe that is never differenced against the crude line (§9.24).

A1.4 · Strait operational — the full record, every provider, every denominator

Provider / universe	Reading	Denominator, and what it is NOT
JMIC Update 093 — US NCAGS	44 Strait transits over the 48 hours 1–2 Sep; narrative text puts the week above 20/day	'U.S.-facilitated Strait of Hormuz transits only'. Stated historical average ~138 vessels/day on a 2025 baseline. (!) THE ONLY LIKE-FOR-LIKE COMPARISON IN THIS RECORD: 44 over 48h is 22.0/day against 092's 19.5/day and 091's 21.7/day. The facilitated series ROSE, reversing last edition's fall. It counts vessels the US Navy is shepherding — ESCORT ACTIVITY, not a functioning waterway
JMIC Update 093 — S&P Maritime / SeaVision annex	THREE on 1 Sep (2 cargo, 1 tanker) and TWO on 2 Sep (1 cargo, 1 tanker). Daily SoH cargo 27 Aug–2 Sep: 0, 6, 2, 1, 2, 2, 1. Daily tankers: 1, 0, 0, 4, 0, 1, 1	'Cargo carrying vessels above 1,000 DWT, excluding vessels calling Iranian ports adjacent to the SoH', non-facilitated. (!) 44 and 5 sit in ONE document for the SAME 48 hours, an order of magnitude apart, and JMIC ITSELF DECLINES TO RECONCILE THEM — its own footnote says only that the metrics are drawn from two separate sources. They are NOT blended (§9.24). The construction is verified: applying it to Bab el-Mandeb reproduces 093's own 66 exactly
Kpler via Reuters — AIS commodity vessels	~5 on Monday 31 Aug: 4 inbound, 1 outbound, against its own ~14 ten-day average. NO liquid tankers at all; one empty handysize gas carrier inbound by the IRANIAN route, three laden dry bulkers	Commodity vessels with AIS transmitting; transponder-off vessels EXCLUDED. Pre-war ~130–140/day. (!) NO Kpler daily covering 2, 3 or 4 September was published. At Bab el-Mandeb the same provider had 27 the same day
Windward MIOC — all transits, AIS plus dark	1 inbound / 3 outbound = 4 in the 24h to 18:00 UTC 1 Sep, against 13 in the preceding 24h. NONE of the three outbound movements was a tanker	24-hour window, all vessel types, AIS and dark. A DIFFERENT universe from every other row and never merged (§9.24). (!) The public dashboard was still stamped 'data as of 1 September' when read on 4 September — it has NOT advanced. A circulating '8 vessels, five dark' attributed to Windward for 3 Sep could NOT be verified against the live page and is NOT carried
IMF PortWatch — AIS transit calls	6 crossings on 30 Aug against 3 on 29 Aug = **7%** of typical	Its OWN pre-crisis baseline of ~85/day, which is NOT UKMTO's 138 and NOT JMIC's. (!) The same week reads very differently on each baseline, which is the whole of §9.19. PortWatch publishes on a lag and 30 August remains its most recent published day
Lloyd's List Intelligence — **WITHDRAWN**	—	(!) The 108 transits / +**27%** w/w for 17–23 August carried last edition could NOT be re-sourced on a direct check and is **WITHDRAWN**, with no restatement found. No Lloyd's List transit series is carried this edition. Its universe was 'cargo-carrying vessels over 10,000 dwt'
UKMTO VRA Overview No. 4 — two universes in ONE document	AIS plus dark: 101 outbound / 103 inbound over the seven days to 27 Aug. AIS only: 'approximately **90%** below pre-conflict baselines'	**22%** and **23%** of UKMTO's OWN pre-conflict average on the first basis, about **10%** on the second. (!) THE SAME DOCUMENT, A DIFFERENT UNIVERSE, AN ORDER-OF-MAGNITUDE DIFFERENT ANSWER. No. 4 STILL STANDS: No. 5 was due Friday 4 September and had not posted at the cut — **PROSPECTIVE**, not missed
CENTCOM blockade tally, via JMIC 093	84 redirected / 3 disabled / 2 boarded, cited as the 'latest available official CENTCOM figure (01 September)'	(!) A BLOCKADE TALLY, NOT A TRANSIT COUNT. It MOVED after three static editions and its data date advanced three days, from 82/3/2 at 29 August. Redirections +2; disabled and boarded unchanged. Prior: 71 on 24 Aug, 68 on 21 Aug. It now post-dates the 1 September strike wave
JMIC 093 — cumulative incidents	101 since 1 March; ONE since the last report, against 100 and three in 092	Confirmed incidents in the JMIC AOR — the whole Middle East Maritime Region, NOT Hormuz alone. The single addition is the SIDR under UKMTO 126-26, which 093 classes an ATTACK, dates to 2050 UTC 31 August and received time-late. (!) The last edition noted SIDR was not itemised in the 100; it is now itemised in the 101
JMIC 093 — mine language	(!) NO declared mine danger area, NO coordinates, NO clearance-operations status. The only mine text is advisory: mariners 'remain vigilant for mining activity within and adjacent to the TSS'	THE LANGUAGE 091 AND 092 CARRIED IS GONE. Both said mine danger areas were 'still active' and clearance operations continuing, and 092's survived a rewrite of the surrounding text. The four-issue contradiction with the theatre commander's mine-free declaration ended by DELETION, not resolution. (!) A deleted paragraph is NOT a statement that the mines are cleared. It is weaker evidence in BOTH directions

A1.4a · Primary text — the statements the judgment rests on, verbatim

Relocated here from the headline under the two-document format so the judgment can be read at length while the wording stays auditable. Each is quoted as its publisher wrote it; the tier and the retrieval route are in A7.

Source, tier and date	Verbatim
Kuwait Armed Forces and Kuwait Ministry of Foreign Affairs — **TIER 1**, 3 Sep	The Kuwaiti army said its air defences were 'currently engaging hostile missile and drone attacks following the heinous Iranian aggression'. The foreign ministry called the strikes 'a direct threat to its security and stability… and a grave breach of the rules of international law'. (!) This is the HOST GOVERNMENT confirming it was attacked, which is what turns Iran's claim into a **TIER 1** event. NO launch count, NO interception count and NO casualty figure was published by any government
Iranian Army, statement on state television — **TIER 3** by this document's key, 3 Sep	'This morning, the army hit the satellite communication systems, equipment depots and fighter aircraft hangars of the terrorist US army at the Ahmad al-Jaber Air Base in Kuwait with missiles and drones', adding that 'the location of forces and radar systems… at the Al Minhad Air Base in the UAE were also attacked'. (!) The KUWAIT leg is corroborated by Kuwait itself; the UAE leg rests on this statement ALONE and Abu Dhabi has confirmed nothing
Vice-President J.D. Vance, White House press briefing — **TIER 1**, 3 Sep	Asked when the war ends: 'When will the Iranians stop shooting at ships?… I don't know the answer to that question. You'd have to ask the Iranians.' He ruled out talks unless Iran halts attacks on commercial shipping, called Iran's control of Hormuz 'a diminishing asset', and said 'I wouldn't call it a war. Right now, there is no active shooting… I recognise there have been places where this has flared up.' On Kuhestak: 'We're investigating it because obviously we care', while 'extremely sceptical' of Iranian accounts
First Vice-President Mohammad Reza Aref, on his own X account — **TIER 1**, 3 Sep	'From now on, our response will be asymmetric, multi-layered and aimed at depriving the aggressor of security.' And: 'The Americans should start thinking about stockpiling gasoline and fuel. Dark months await the American economy.' (!) An explicit Iranian statement of intent to act on the AMERICAN ENERGY PRICE, which is the transmission channel this document measures
JMIC Advisory Note Update 093, ICOD 031500 UTC — **TIER 1**, 3 Sep	Strait of Hormuz threat block: mariners are advised to 'remain vigilant for mining activity within and adjacent to the TSS'. Outlook 5B: 'Navigation interference persists, and mariners are encouraged to remain vigilant for mining activity in the area.' Commercial traffic 'remained at reduced levels, with a modest uptick from recent lows, yet still below baseline'. (!) Set against 092's 'mine danger areas still active' and 'clearance and mine-surveying operations continue', both of which are ABSENT from 093

Source, tier and date	Verbatim
Axios (Barak Ravid), 'tanker for tanker' — **TIER 2**, still one chain, 2 Sep	'The U.S. military attacked two Iranian government tankers as part of the round of strikes that took place on Tuesday, U.S. officials said… A U.S. official said the move was part of a new "tanker for tanker" policy approved by President Trump.' (!) Every attribution is ANONYMOUS. Every subsequent outlet cites Axios — republication is not corroboration. No named official has confirmed or denied it and no second tanker strike has been reported

A1.5 · Retail fuel — three series, never compared, and a description WITHDRAWN

(!) A STANDING DESCRIPTION IN THIS DOCUMENT IS **WITHDRAWN** ON RE-VERIFICATION (§9.23). AUTMUSAG has been captioned here for months as 'AAA all-grades retail pump'. The extract's own description row labels the ticker only 'US Average Gasoline Price' — the AAA attribution is this document's gloss, not the vendor's, and it cannot be reconciled to AAA's published tables: AAA's national average is the REGULAR grade at **$4.1436**, and the mean of its three grades is **$4.610**, against the scored series' **$4.90**. **What is NOT in doubt is the series itself.** It is continuous from before the war, it carries the **$3.52** pre-war anchor on which the whole political channel is scored, and its spread to the DOE regular series is stable and structural — a war-long mean of 65.6c in a range of 51.6c to 75.9c. **(!) That spread stood at 75.9c on 31 August, the last session on which both printed and the widest of the war, which is itself consistent with the grade separation the AAA table shows.** The **$4.90** and **$4.071** prints are three sheet-days apart and are NOT differenced. Three consequences, and the third is the operative one. (a) The DESCRIPTION is corrected to the vendor's own label. (b) The reconciliation of AUTMUSAG to any published AAA construction is OPEN and NOT CLOSED HERE. (c) The trigger is NOT moved and the score does NOT change — re-basing a scored series under time pressure, on the edition in which its description was found wrong, is exactly what §9.21 and §9.56b forbid, and the **$4.60** / **$4.75** levels and the entire scored history are written on this series.

Series	Latest resolved	Denominator and note
AUTMUSAG — the SCORED series	**$4.90** (2 Sep, **BACKFILLED** this edition)	Vendor label: 'US Average Gasoline Price', daily, one-day lag. (!) The 'AAA all-grades' gloss is **WITHDRAWN** (above). Backfilled UP four cents from the **$4.86** carried — a **FOURTH** consecutive rise and the highest print since 2 June. NOT a **war high**: **$5.18** on 20 May stands (§9.32). Dark on 3 and 4 September. **30 cents** above the **$4.60** downgrade condition and 15 above the **$4.75** that fired the upgrade. Preserves the **$3.52** anchor and the full history; never re-based
USRFRUSA — corroboration only	**$4.071** (31 Aug survey)	DOE regular-grade retail spot, weekly, surveyed Monday. –1.4c on the week; on-highway diesel **$5.599**, –5.3c. (!) The EIA weekly and the AAA daily point OPPOSITE WAYS — EIA down on both fuels to 31 August, AAA up on both into 3 September. The EIA print is a week older and Monday-dated; the turn happened after it. Different surveys, never merged. The next EIA print is DELAYED to 10 September by the 7 September federal holiday. Pre-war ~**$2.94**, peak **$4.50**
AAA published headline — read direct	Regular **$4.1436**, mid **$4.6543**, premium **$5.0335**, diesel **$5.7832**, E85 **$3.1370** — page stamped 'price as of 9/3/26', read 4 Sep	AAA national averages by grade. (!) The prior-day row reproduces EXACTLY the **$4.1203** / **$5.6879** published yesterday, so the series rolled cleanly and NO restatement occurred. The two fuels are separating on every horizon: on the day regular +2.33c against diesel +9.53c; on the week +4.39c against +16.49c; on the month +4.90c against +41.93c; on the year +95.3c (+**29.9%**) against +**$2.079** (+**56.1%**). (!) Diesel at **$5.7832** is **3.27 cents** below its ALL-TIME record of **$5.8159**, set 19 June 2022 — four years before this war, and never to be called a **war high** (§9.32). AAA's own regular record is **$5.0165** (14 Jun 2022). The 4 September figure had NOT posted at the Singapore cut and is not estimated

A1.6 · Freight, war risk and ports

THE BALTIC FREIGHT READ IS NOW OPENLY UNCERTAIN AND IS REPORTED AS SUCH. Week 36 was due Friday 4 September and had not posted at the Singapore cut — **PROSPECTIVE**, not missed. (!) More consequentially, an independent re-check this edition could NOT re-source the week-35 figures this document has been carrying — TD3C at WS623 with a round-trip TCE just over **$647,000**/day, dated 28 August. The only Baltic assessment that could be retrieved by direct search is dated 9–10 August: TD3C at WS475.56, +46 points w/w, round-trip TCE **$481,286**/day; TD34 WS170, TCE above **$145,800**/day. **That figure is four weeks old and is NOT presented as current.** Per §9.19 and §9.13, a carried third-party number that fails re-verification is flagged rather than repeated as though confirmed: the week-35 TD3C figures are retained but marked **UNCONFIRMED ON RE-CHECK**, and no freight-based conclusion in this edition rests on them.

WAR RISK: the range firmed and it is now anchored on a named, dated primary publication. Lloyd's List reports war-risk cover for a single VLCC transit of Hormuz 'tops **$10**m', with insurers seeking **$10**m–**$14**m per voyage on a hull worth about **$138**m — roughly **7.2%** to **10.1%** of hull, against ~**0.25%** pre-war. **That sits inside the wider of the two standing Marsh ranges and is the first figure with both a named publication and a stated hull denominator (§9.19).** (!) A material qualification from the market's own body: the Lloyd's Market Association states that the constraint on traffic is 'safety concerns, not insurance availability' — cover remains on offer from Lloyd's and the London market. **That directly contradicts the 'six P&I clubs withdrawn' line this document withdrew on 7 August and it is not revived.** The straits.live derived multiple of '40.0x pre-crisis' is NOT carried: its own data-health panel shows the insurance input was last set sixteen days before the read. The standing Marsh figures are retained for continuity: 3–**10%** of hull (Marcus Baker, Marsh, 17 July) and 7.5–**10%** (S&P Global citing Marsh, 22 July), published side by side and never interpolated. The Lloyd's JWC listed-areas circular last changed 29 July 2026 and is unchanged.

PHYSICAL AND PORTS. Iranian export volume, loading counts and tanker-queue figures for early September were sought from Kpler, Vortexa and TankerTrackers and NONE was published — recorded as **NOT FOUND**, with no number supplied in their place. The standing August figures are carried unchanged and their two denominators are never averaged: Kpler puts KHARG-ONLY August loadings at 135,000 b/d against 1.98 mn b/d in February, a **93%** collapse, while a second Kpler figure of 251,000 b/d covers ALL Iranian loading points. Kharg's western terminal resumed loading on 12 August after a 25-day shutdown. (!) Iran's own petroleum minister, Mohsen Paknejad, said on 4 September that the industry continues to 'circumvent' the blockade, describing the situation as difficult but manageable — **TIER 2**, and the first Iranian ministerial characterisation of the export position in this window. Iran's PGSA blacklist stands at 56 vessels, unchanged since 2 September, ADNOC L&S, Navig8 and Bahri among the owners; delisting requires a formal application and any vessel conducting ship-to-ship with a listed vessel is itself added. AMARA (IMO 9333280) is UNCHANGED — seized, status unknown since 19 August, no update obtainable by name, by IMO or against three trackers. Five merchant vessels remain held per JMIC 093 — HONOUR 25, SWARD, EUREKA, ASANA and SEAMULL (SIBU 1) — the same five, all Somali or Yemeni piracy holdings and none Iranian. (!) The head of Mitsui OSK Lines said on 3 September he expects Hormuz disruption to run through year-end; single outlet, not independently confirmed, and recorded as a shipowner's planning assumption rather than a forecast this document adopts.

A2.3 · CROSS-ASSET AND MACRO RECORD — FULL

A2.3.1 · A bull steepener for a second session, and both Treasury legs moving toward the trigger for only the second time in the war

The 3 September session was a **BULL STEEPENER** for a second consecutive close — 2-year –**3.30 bp** to **4.3360%**, 5-year –1.95 to **4.5144%**, 10-year –1.00 to **4.7680%**, 30-year –1.06 to **5.2465%** — with the whole fall concentrated at the front — the 10-year posting the smallest fall on the curve and the 30-year a fraction more, and 2s10s corroborating independently at +2.088 to 42.788, its widest since 27 August. **(!) After three distinct curve signatures in four sessions, two consecutive sessions have now shared one, which is the first sign of a settled shape in this window.** Every **war-high close** of 1 September SURVIVES and none was approached: the 2-year's **4.3998%**, the 5-year's **4.5551%** and the 10-year's **4.7981%**. The 30-year's **war high** remains **5.3060%** of 17 August, **5.95 bp** above Thursday's close.

The single most consequential market fact is in volatility, not yield. **MOVE closed 74.68, –5.03 — its largest one-day fall in a fortnight — BACK BELOW 75, ending the three-close run above it that began on 31 August and marking the first sub-75 close since 28 August.** The Treasury downgrade's volatility leg is **SATISFIED** again. Against it the yield leg fails by **24.65 bp**, narrowed from 25.71. (!) BOTH LEGS THEREFORE MOVED TOWARD THE DOWNGRADE IN THE SAME SESSION, WHICH HAS HAPPENED ONLY ONCE BEFORE IN THIS WAR — on 25 August, when MOVE fell 2.06 and the yield gap narrowed **5.94 bp**. **§9.15 requires both gaps to be computed and compared rather than the satisfied one reported alone, and on that test this is the most favourable single session the Treasury downgrade has had since 25 August.** It changes nothing, and §9.18 is exactly why: this leg was satisfied on 5 August at 73.58 and gone on the 6th, and satisfied on 7 August at 72.03 and gone on the 10th. A single sub-threshold close is a session, not a regime. (!) A second qualification that matters as much: the yield leg narrowed because YIELDS FELL, not because volatility converged on it. The two legs are still measuring different things and happening to agree for one close.

The inflation forward strengthened while the nominal fell, which is the composition that matters. The 5y5y closed **2.3154%**, +**0.58 bp**, a **THIRD** consecutive close above the **2.30%** firing level and by the widest margin of the three — **1.54 bp**, against 1.10 on 1 September and 0.96 on 2 September. The two-close break of 28 and 31 August is fully unwound. BE10 closed **2.3539%**, +**0.51 bp**, **9.70 bp** above its **2.2569%** anchor. (!) The 10-year nominal FELL **1.00 bp** while BE10 ROSE 0.51, so the entire fall and more came out of REAL yield — the inverse of 2 September, when compensation carried under half of a larger fall. **This is also the first session in three in which BE10 and the 5y5y moved the SAME way as each other; on 31 August they moved in opposite directions, which §9.54 records as a reason to act on neither.** Elsewhere: VIX 14.32, –0.88, within 0.07 of the war low of 14.25 set 14 August; DXY 98.908, –0.688, the largest dollar fall in a fortnight and the lowest close since 98.80 on 21 August; SOFR dark for a second session with 3.65 last resolved.

A2.3.2 · The data, and what the services survey actually said

Three US releases landed on 3 September and the services survey is the one that matters. ISM Services for August: headline 55.4 from 54.1 against a ~54.3 consensus — the strongest reading in six months — on Business Activity 61.7 (from 59.1), New Orders 60.9 (from 57.2) and Inventories 56.7. Against that, Employment CONTRACTED for a second consecutive month at 47.8 (from 47.4), and Prices Paid rose to 72.6 from 70.3, the highest in FOUR YEARS. **(!) This is NOT the manufacturing survey.** ISM Manufacturing Prices, reported in this document on 3 September at 71.1 on its twenty-third consecutive month of expansion, is a different index of a different sector and the two are never merged or compared as a series (§9.24). A services economy expanding at a six-month high, shedding labour for a second month, and paying the most for inputs in four years is an input-cost shock arriving in roughly four-fifths of US output. Jobless claims 206,000 against a 205,000 consensus and 203,000 prior — effectively unchanged and not a signal. The July international trade report: the goods-and-services deficit widened **$17.4**bn to **$88.6**bn from a revised **$71.2**bn, the goods deficit +**$17.6**bn to **$119.6**bn, exports **$310.7**bn (–**$6.6**bn) and imports **$399.3**bn (+**$10.8**bn). (!) The import surge is CONSISTENT with the crude-import line in A1.3 but is an all-goods figure on a far wider universe, and the two are never differenced (§9.24).

The August employment report is released at 08:30 ET on 4 September — 20:30 Singapore, AFTER this cut — and is **PROSPECTIVE**, not unobtained (§9.46). BLS was still serving the July release when checked. Consensus is +53,000 with unemployment holding at **4.1%**, against July's –23,000 and downward revisions of 66,000 to May and 37,000 to June — 103,000 combined. (!) The reaction function is INVERTED relative to 2024–25 and this must be said before the print, not after: with the Fed priced for a HIKE rather than a cut, a STRONG payroll is the hawkish outcome and would push the long end further from the Treasury downgrade, while a weak one takes hike risk off the table. **§9.14 applies in reverse — the Singapore cut falls entirely before the release, so next week's edition carries the first read and this one may not anticipate it.** Nonfarm productivity and July factory orders were sought as actuals and **NOT FOUND**; no number is supplied in their place.

A2.3.3 · Fed pricing — two venues, never averaged

The next FOMC is 15–16 September. Pricing is for a HIKE, not a cut, and the driver is Chair Kevin Warsh's Jackson Hole keynote of 28 August, which flagged PCE at **3.7%** on twelve months and **4.1%** annualised on six. CME FedWatch: **66%** probability of a **25 bp** HIKE — but that figure is dated 31 AUGUST and was NOT RE-OBTAINED for 3 or 4 September from cmegroup.com directly; it is carried with its date attached and is four days old. A second venue, an aggregator read on 3 September, puts the probability of a 2026 hike at ~**65.5%**. (!) No cross-venue composite is constructed and no trend is read across the two (§9.24): they are different contracts over different horizons — one a September meeting probability, one a calendar-year probability — and their near-equality is a coincidence of construction, not a confirmation. Polymarket was NOT re-obtained this edition; its last carried figure is **57.5%** for a **25 bp** September hike on 2 September, and the absence is recorded rather than filled. No Fed speaker appeared on 3 or 4 September — **NOT FOUND** against the calendar.

A2.3.4 · Treasury supply — the coupon sizes RECOVERED, and a promised document that still has not appeared

(!) AN ITEM CARRIED AS UNOBTAINED FOR FOUR EDITIONS IS CLOSED, AND BY THE ROUTE THIS DOCUMENT'S OWN RULE SPECIFIES. The 3 September coupon announcement could not be retrieved from wire copy or from the TreasuryDirect announcement pages, which return empty to a fetcher. **It was recovered in full from the fiscaldata.treasury.gov auctions API — the standing method mandated by §9.39a after the 20 August tail episode.** Announced 3 September 2026: a **$58**bn 3-year note (CUSIP 91282CRL7, new issue, auction 8 September); a **$39**bn 10-year note reopening (91282CRF0, coupon **4.625%**, auction 9 September); and a **$22**bn 30-year bond reopening (912810UW6, coupon **5.125%**, auction 10 September). **All three settle 15 SEPTEMBER — the first day of the FOMC.** Bills announced the same day: 13-week **$92**bn, 26-week **$79**bn, 6-week **$75**bn. **$119**bn of coupon supply and a policy decision arrive together, into a curve that has taken three distinct shapes across the last five sessions. (!) NO trend is read from the 30-year's **$22**bn against the **$25**bn of 13 August: that is a REOPENING against a NEW ISSUE, the two are structurally different instruments in the quarterly cycle, and comparing them is precisely the denominator error §9.40 forbids. The 30-year's **5.125%** coupon is the August-issued bond, consistent with the 13 August auction clearing **5.216%**.

The buyback regime is now FIVE DAYS away and its schedule is still not published. Treasury release SB0607 of 19 August — and the date is restated because it has been misattributed to 3 September on secondary surfaces — at least DOUBLES the maximum buyback operation in the 10y–20y and 20y–30y nominal sectors from **$2**bn to **$4**bn, effective 9 SEPTEMBER and running to 4 November. It promised an updated tentative buyback schedule. That document has STILL NOT APPEARED, for a fourth consecutive edition. (!) The operation therefore begins on the same day as the 10-year reopening, the day after the 3-year auction, with the sovereign buying its own long end in the same week it sells **$61**bn of tens and thirties. Threshold A remains **UNTESTABLE AS WRITTEN** (§9.39): its test requires a clearing yield with a tail above the 1pm when-issued level, and Treasury does not publish a when-issued level at all, so the test cannot RETURN a state and A is carried as **NOT ARMED** ON THE RECORD rather than as satisfied or unsatisfied. The auditable substitute is the allotment composition, which the same API returns in full — offering, total accepted, SOMA add-on, high/median/low yield and allotment by bidder class — and which is where the 20 and 21 August editions found two consecutive long-end auctions clearing with almost no dealer backstop (§9.40). Read that on 9 and 10 September, not a tail that cannot be sourced. The bills auctioned this week are not a Threshold A input and their results are NOT RETRIEVED.

A2.3.5 · War Powers — the statutory expiry falls in FOUR DAYS, into an empty chamber

Unchanged in substance and re-verified against the primary schedule. The war-powers notification was dated 10 July, so the 60-day clock expires 8 SEPTEMBER — four days from this edition — and the 30-day withdrawal extension runs to 8 October. **The Senate's own tentative 2026 legislative schedule places a non-legislative period from 10 August to 11 September, with Labor Day on 7 September, and the chamber does not return to legislative session until Monday 14 September.** The statutory expiry therefore falls six days before the chamber that would have to act can act, and no privileged motion or floor vote can occur before it lapses. (!) The pro-forma characterisation this document once used is NOT revived: the Senate's published schedule lists non-legislative days and does not itself use that phrase, so the finding is stated as the recess and the return date, both of which are primary. The House returned 31 August and has taken no action. No new war-powers resolution, privileged motion, discharge petition or committee action was found in this window, and no member statement on the Kuwait strike could be retrieved. (!) The one Congressional datapoint in the record remains the briefing, not a vote: Adm. **Brad Cooper briefed the House Armed Services Committee on the morning of 1 September, hours before the strikes, after which Chairman Mike Rogers said 'They've got a plan' and that he would 'anticipate' an intensification.** The Senate has voted eleven times on Iran war-powers measures in 2026; the most recent, 23 July, failed 47–49 on S.J.Res.180. Trump has separately called reporting on munitions stockpiles 'treasonous scum' (3 September), which is the only executive engagement with the oversight question in the window.

A2.3.6 · The SPR — the withdrawn figure REPLACED, confirmed and dated

(!) THE OPEN ITEM FROM THE LAST EDITION IS CLOSED ON TWO OF ITS THREE **UNRESOLVED** EDGES. The 3 September edition withdrew the **293.4 mn bbl** it had been carrying as current — correctly, that being the week-ending 14 August print — and replaced it with **286.6 mn bbl** flagged as DOE-sourced, with a data date given variously as 26 or 28 August, and with a 'lowest since' month that varied across outlets. The provider and the data date are now resolved from the primary source; the 'lowest since' month is not. The figure is EIA-sourced, from the Weekly Petroleum Status Report stocks table, released 2 September and data-dated week ending 28 AUGUST 2026. The provider attribution is therefore **CORRECTED** from DOE to EIA: the Department of Energy publishes no machine-readable figure at all — its own inventory page resolves to a page titled 'Strategic Petroleum Reserve Inventory 2005' whose only content is a JPEG — so EIA is the citation and DOE is not usable as one. The series reads 293.4 at 14 August, 289.7 at 21 August and 286.6 at 28 August: a **3.1 mn bbl** weekly draw, 6.8 mn over the fortnight, and 118.1 mn below the 404.7 of 29 August 2025. At 286.6 the reserve is about **40%** of its **714 mn bbl** authorised capacity. (!) The 'lowest since' month is still NOT asserted. The variants across outlets were November 1982, 1982–83 and December 1982, and resolving which is right requires a monthly back-series this document has not retrieved; it therefore continues to write 'the lowest in more than four decades' and to drop the month, which is defensible on every variant. No cross-provider delta is computed (§9.19). (!) A circulating attribution of 289.7 to 'the EIA report dated 2026-08-26' is WRONG and is not carried: 289.7 is the 21 August week and is superseded. No WPSR falls on 3 or 4 September and the next is DELAYED to 10 September by the 7 September federal holiday, which also delays the EIA Monday retail series — so both fields stay dark for a week and their absence next edition will be a CALENDAR fact, not a retrieval failure.

A7 · SOURCE LOG

Tier 1 = primary or official. Tier 2 = reputable wire or press. Tier 3 = state media or relayed claim, corroborated against Tier 1 before it is used for anything market-moving. **NOT OBTAINED** = sought and missed, with the method named. **PROSPECTIVE** = relates to a session or publication that had not occurred at the Singapore cut, and is not a retrieval failure (§9.46). **Every 'used for' below was checked against what is actually published in the two documents; an entry that supports nothing published has been deleted.**

Tier	Source	Used for
1 · DATA	Tecity Bloomberg extract, 'US Iran BBG Data.xlsx', pulled 4 Sep. 179 rows × 99 columns; tickers read from the header scan, never hardcoded (§3)	EVERY price, yield, spread, volatility and retail-fuel figure in both documents. The 3 September close is the scoring reference; the 4 September row is intraday and moves nothing. (!) No price is taken from the web. The extract's own row-1 description for AUTMUSAG — 'US Average Gasoline Price' — is the basis for withdrawing the 'AAA all-grades' gloss (A1.5)

Tier	Source	Used for
1	JMIC Advisory Note Update 093, ICOD 031500 UTC, obtained as a primary PDF by filename-convention guessing on the media path (the technique that worked for 092)	The count at 101 / +1 and the SIDR as the single addition, classed an ATTACK and dated 2050Z 31 Aug; threat levels unchanged and Hormuz **SEVERE**; 44 NCAGS-facilitated transits for 1–2 Sep and the 3 and 2 annex figures for the same window; the CENTCOM blockade tally at 84/3/2 and its 1 September data date; five held vessels. (!) Also the ABSENCE: no mine danger area, no coordinates and no clearance-operations status, against 091 and 092 which carried all three
1	Kuwait Armed Forces statement and Kuwait Ministry of Foreign Affairs statement, 3 Sep, via Al Jazeera, The National and Kurdistan24	THE SINGLE MOST IMPORTANT TIER-1 ITEM THIS EDITION: the host government confirming its air defences were engaging, which converts Iran's claim into a corroborated event and WITHDRAWS the last edition's two-day kinetic gap. (!) Used with the explicit negative that NO launch, interception or casualty count was published by any government
1	Vice-President J.D. Vance, White House press briefing, 3 Sep, via Al Jazeera and Reuters write-ups with AFP photography	The conduct precondition for talks; 'you'd have to ask the Iranians'; Hormuz as 'a diminishing asset'; the refusal to call it a war; and the first US acknowledgement that Kuhestak is being investigated, alongside his 'extremely sceptical' qualifier
1	First Vice-President Mohammad Reza Aref, own X account, 3 Sep, relayed verbatim by Middle East Eye and Anadolu	The 'asymmetric, multi-layered' response and 'dark months await the American economy' — used in §1.5 and §2.1 as an explicit Iranian statement of intent against the US energy price. (!) Anadolu's page returned an empty body on fetch and is cited from the search index; MEE carries it directly
1	centcom.mil Public Releases index and the 1 Sep release, both read direct 4 Sep; fm.gov.om statements index, read direct 4 Sep; ofac.treasury.gov Recent Actions and home.treasury.gov press releases, both read direct 4 Sep	THE NEGATIVES, each with its query stated (§9.23c): CENTCOM has published nothing since 1 Sep and no BDA of any kind; Oman has published no Iran, Hormuz, mediation or corridor statement dated 2, 3 or 4 September, its last of any kind being 29 Aug and its last Iran-related the 25 Aug joint statement; and the last Iran-related Treasury or OFAC action is 28 August, the 2–3 Sep actions being Venezuela, Cuba and Russia
1	fiscaldata.treasury.gov auctions API (the standing method under §9.39a), queried direct 4 Sep	THE 3 SEPTEMBER COUPON ANNOUNCEMENT, carried as **NOT OBTAINED** for four editions: **$58**bn 3-year (8 Sep), **$39**bn 10-year reopening (9 Sep), **$22**bn 30-year reopening (10 Sep), all settling 15 Sep, with CUSIPs and coupons. (!) The TreasuryDirect announcement pages return empty to a fetcher and wire copy carried no sizes — the API is the only route that works
1	AAA Daily Fuel Gauge, read direct 4 Sep, page stamped 'price as of 9/3/26' on two URL variants; EIA Weekly Petroleum Status Report highlights file and release schedule, fetched direct	Regular **$4.1436**, mid **$4.6543**, premium **$5.0335**, diesel **$5.7832** and the clean prior-day roll; the **$5.8159** all-time diesel record of 19 June 2022; SPR **286.6 mn bbl** for the week to 28 August; crude imports **6.8 mb/d**; distillate **14%** below the five-year average; utilisation **98.0%**; and that the next WPSR is delayed to 10 September
1	ISM Services PMI report for August, 3 Sep; BEA/Census US International Trade in Goods and Services for July, 3 Sep; bls.gov Employment Situation page, read direct 4 Sep	ISM Services 55.4, Business Activity 61.7, New Orders 60.9, Prices Paid 72.6 and Employment 47.8; the July deficit at **$88.6**bn on a **$10.8**bn import surge; and that BLS was still serving the JULY release, which is what makes the August report **PROSPECTIVE** rather than missed
2	Reuters, AFP, Al Jazeera, ABC News, The National, Kurdistan24, Middle East Eye, Anadolu, 2–4 Sep	The Kuwait and claimed-UAE strikes and the Iranian army's own target description; the three-day absence of a US wave; and the Kuhestak toll revised DOWN from five to four with no explanation given, which is the only figure from this row carried into either document
2	Axios (Barak Ravid), 2 Sep, and the relay set — Breitbart, MarineInsight, Splash247, IBTimes, ground.news — each checked for independent sourcing	'Tanker for tanker' and the two tanker strikes. (!) Every attribution in the original is ANONYMOUS and every subsequent outlet cites Axios, so this remains ONE sourcing chain; republication is recorded as NOT corroboration. No named official has confirmed or denied it; no second tanker strike has been reported. The ~100-target figure is from this chain and is NOT a CENTCOM number
2	Kpler via Reuters/Al-Monitor, 1 Sep; IMF PortWatch via straits.live, read 3 Sep; Windward Daily Intelligence public dashboard, read 4 Sep; Lloyd's List war-risk report; Lloyd's Market Association statement	~5 Hormuz transits on 31 Aug against a ~14 ten-day average, with no liquid tankers; 6 PortWatch crossings on 30 Aug against its OWN ~85/day baseline; war-risk cover 'tops **$10**m' for a single VLCC trip, **$10**–14m on a ~**$138**m hull. (!) The LMA line that the constraint is 'safety concerns, not insurance availability' is used to keep the withdrawn 'six P&I clubs' claim buried
2	Iran petroleum minister Mohsen Paknejad, 4 Sep; Mitsui OSK Lines chief via gCaptain, 3 Sep; Reuters via BOE Report and MarineLink on the PGSA list, 2 Sep	The Iranian ministerial characterisation that the industry continues to 'circumvent' the blockade; the MOL year-end disruption expectation, recorded as a shipowner's planning assumption and NOT adopted as a forecast; the PGSA blacklist at 56 vessels, unchanged since 2 Sep
3	IRNA, Press TV, Tasnim, Mehr, Fars, state television, 2–4 Sep	The Iranian army's Kuwait and UAE target list, used only because Kuwait corroborated the fact of the attack and never for the damage claim. RECORDED AND NOT USED for any finding: the IRGC claim that two tankers struck MINES, which CENTCOM denies outright and which Ambrey says has 'no meaningful evidence' behind it; Tasnim's six navy dead; Baqaei's claim of a Qatari official document, for which no Qatari confirmation was found
NOT OBTAINED	UKMTO Warning 127-26 and any advisory dated 3–4 Sep — listing pages are client-hydrated and render '0 reports' and 'no products to display', and two filename-convention guesses on the media path returned empty; CME FedWatch direct from cmegroup.com (QuikStrike iframe exposes no text); Polymarket, not re-driven this edition; nonfarm productivity and July factory orders as actuals; any Kpler, Vortexa or TankerTrackers Iranian export or loading figure for early September	126-26 remains the highest corroborated, via JMIC 093 which carries it. Recorded as gaps with the method named so the reader can distinguish a fact about the world from a fact about the fetch (§9.50). (!) A further method is owed on CME FedWatch for a second consecutive edition, and the **66%** figure is carried with its 31 August date attached rather than presented as current

Tier	Source	Used for
NOT RE-SOURCED	Lloyd's List transit series (108 / +**27%** for 17–23 Aug); Baltic week-35 TD3C at WS623 / **$647**k per day	(!) Both were carried by the last edition and neither could be re-sourced on a direct check. The Lloyd's List transit figure is **WITHDRAWN** outright (§9.19). The week-35 Baltic figures are RETAINED but marked **UNCONFIRMED ON RE-CHECK** — the only retrievable Baltic assessment is dated 9–10 August at WS475.56 and **$481,286**/day, four weeks stale — and no conclusion in this edition rests on them
PROSPECTIVE	August employment report (4 Sep 08:30 ET, BLS still serving July); UKMTO VRA Overview No. 5 (Friday cadence, 4 Sep); Baltic week 36 (Friday, 4 Sep); JMIC Update 094; the updated tentative buyback schedule promised in SB0607; the 3-year auction (8 Sep); the enlarged buyback regime (9 Sep); OPEC+ JMMC (6 Sep); FOMC (15–16 Sep)	Not retrieval failures. (!) In one case the non-publication is POSITIVELY evidenced rather than assumed — the BLS release page still carries the JULY tables with the standard footer naming 4 September for August. The buyback schedule is the exception and is now a genuine failure to publish rather than a prospective item: it was promised on 19 August for a regime beginning 9 September and is still absent for a fourth edition

A8 · ON-DEMAND UPDATE PROTOCOL

#	Step	Detail
1	Refresh and verify the extract	Never build an edition off a stale extract (§9.22). Check the file mtime AND parse the sheet. This edition: the extract carries a 4 September row against the 3 September row the last edition ran on, and the 3 September row has settled into a genuine close. It is fresh.
2	Parse with a dynamic header scan	Column indices move between uploads. Auto-detect the Brent and WTI front month and take whatever label the header scan returns for DXY. Re-verify the 27 February anchor field by field — done this edition, unchanged on all seventeen fields listed at A10.1, and on SOFR at 3.68. (!) Read the DESCRIPTION row, not just the ticker row: doing so this edition is what exposed that AUTMUSAG is labelled 'US Average Gasoline Price' and not 'AAA all-grades' (A1.5). A ticker map is not a definition.
3	Run all THREE integrity checks	Row-level (§9.8), field-level identical-value at the precision each series is published to (§9.35, §9.48), and the continuation-versus-active BASIS check (§9.41). This edition: ALL THREE **CLEAR**, with no flag raised and none outstanding — the 30-year flag raised two editions ago having discharged last edition. The nearest approach to §9.35 is the 5-year at 4.5146 against 4.5144, two units at the fourth decimal in a live row, which is the surviving half of §9.25 and NOT a carry.
4	Run the backfill check in BOTH directions	§9.10: yesterday's dark cells must be re-examined, not carried, and a backfill is as likely to run against a trend as with it. This edition it fired on THREE cells and TWO were consequential: AUTMUSAG backfilled UP to **$4.90**, four cents above the value carried and the highest since 2 June though NOT a **war high**, WIDENING the political distance to **30 cents**. MOVE printed 74.68 into a dark cell and changed a THRESHOLD STATE. (!) SOFR did NOT backfill, breaking a two-edition run; the absence is recorded, not filled. The test has now fired UPWARD on the scored gasoline series in FOUR consecutive editions, the last three at **$4.83**, **$4.86** and **$4.90**.
5	Compute deltas and test every trigger	d/d, w/w five rows back, and versus pre-war; explicit trigger tests for the four market channels plus Stage-4 A, B and C. Run min, max and last-prior-occurrence on the full column before writing ANY superlative (§9.32). This edition that discipline established the Asia LNG close as the **TWELFTH** war record, established that Threshold B's five-close run IS the longest of the regime by checking every prior run, and — most importantly — stopped the active contract's **$95** breach being written as a first when it is the twenty-sixth such close and the first PAIR since 20–22 May.
6	Verify the news, and re-verify what was inherited	Every claim needs a named source and an exact date, and negative claims decay fastest of all (§9.23). State the exact query behind every negative. Say **NOT OBTAINED** rather than estimating, and distinguish it from **PROSPECTIVE** (§9.46). (!) This edition is the cautionary case and it is this document's own: the last edition published 'no fresh wave from either side' — TWO negatives in one clause. The American half was checked against CENTCOM and held; the Iranian half was not checked against the Gulf states and was false, Kuwait having said on the record that it was under attack. A compound negative must be decomposed and each half checked against the party that would have acted.
7	Build, then QA in three passes	A numeric harness against the dataframe; a STYLE harness measuring bold ratio and headline length (§9.52, §9.55); an adversarial PROSE pass by reviewers with no access to the source data, run as TWO reviewers CONCURRENTLY against the same pre-fix text and merged into one patch (§9.42); and a VISUAL render, which is not optional (§9.43). Re-run the numeric and style harnesses AFTER the prose fixes. Balance the bold tags in every fragment after every edit (§9.42a). Check the page budget at build time, not after the prose is final (§5A).
8	Deliver both documents	The edition and the annex go into the project root together. A file that is not committed never reaches the reader. The annex does not go into the dashboard PDF folder, because the score-history script regexes a score sentence out of every PDF there and the annex has none. Then snapshot the fragments under a date-stamped name, at the END of the run, so no edition can overwrite another's sources.

A9 · METHODOLOGY

Six channels, each scored 0–5, summed to 0–30. Bands: 0–7 watch; 8–14 stress; 15–21 systemic-risk watch; 22–30 crisis. Maritime denial and escalation risk are event channels; oil, US inflation impulse, Treasury stress and political stress are market channels scored on confirmed closes.

(a) Confirmed closes only for market channels. No market channel moves on an intraday print. The 4 September snapshot in this document moves nothing — including an active-contract mark of **$95.81** that is THROUGH the trigger level for a third consecutive session, only two of which are closes. **(b) Hysteresis, and it has now been vindicated TWICE on the same channel.** Upgrades fire on a sustained break; downgrades require a sustained reversal past a wider threshold. The 5y5y forward closed BELOW its own firing level on 28 and 31 August and two editions came under pressure to redefine the downgrade to meet it. The rule was NOT moved — and the forward has now closed ABOVE the level on 1, 2 and 3 September, by 1.10, 0.96 and **1.54 bp**, the last the widest of the three. Had the rule been moved, this edition would be unwinding it for the second time (§9.16, §9.26). (c) The scale saturates in BOTH directions (§9.7, §9.27). FIVE of six channels are at the cap, so the score could not register Iran striking a **FOURTH** country in a week with the host government confirming it, an American vice-president setting Iranian CONDUCT rather than an Iranian signature as the price of talks, the deletion of the mine-danger language from the allied product, a twelfth **war-record close** in Asia LNG, or US diesel three cents from an **all-time record**. Nor could it register what cut the other way — a third day with no American strike wave, Treasury volatility back below 75, and an inflation forward holding above its firing level for a third close. A flat 27 is an instrument at its stop.

Rules exercised this edition, named so the reader can audit them. §9.8, §9.35 and §9.41 ALL **CLEAR**, with no flag raised and none outstanding (A1.1). §9.10 — the two-way backfill test, fired on THREE cells, has now fired UPWARD on the scored gasoline series in FOUR consecutive editions, and recorded a NON-backfill on SOFR rather than filling it. **§9.11 — an announcement is not an event, applied symmetrically: neither the 'tanker for tanker' doctrine nor Vance's conduct precondition moved a channel.** §9.15 — STATED IN FULL BECAUSE THIS EDITION IS THE RARE CASE WHERE IT ALMOST DOES APPLY: where a channel has two downgrade legs, it is only nearing a downgrade when BOTH legs move toward it in the same session; legs moving in opposite directions are ROTATING, and rotation is not approach. On 3 September BOTH Treasury legs moved toward the downgrade — MOVE to 74.68, below 75, and the yield leg to **24.65 bp** from 25.71 — which has happened only once before, on 25 August. **It still does not fire, because §9.18 holds that a single sub-threshold close is a session and not a regime, and because the yield leg narrowed on falling yields rather than on converging volatility.** §9.13 — a prior event is never reused for a later one: the 1–2 September Jordan salvo and the 3 September Kuwait strike are kept wholly apart, on different counting bases, and no running total merges them. §9.19 and §9.24 — four transit universes plus a blockade tally and an incident count that are neither, every denominator named, none spliced or averaged, including the 44 and the 5 that sit inside a single JMIC document for the same 48 hours and which JMIC itself declines to reconcile, and two Fed-pricing instruments over different horizons that are not centred. §9.23 — every negative names the page checked, the method and the date range, and THREE items are **WITHDRAWN** on re-verification this edition: the last edition's own two-day kinetic gap, the Lloyd's List transit series, and the description of AUTMUSAG as 'AAA all-grades'. §9.26 — engaged on TWO channels at once for the first time: dormant-but-vindicated on inflation, and squarely engaged on oil, where it is what forbids resolving §9.56 toward whichever Brent series would fire the upgrade. §9.30 — the scored gasoline series backfilled UP for a fourth consecutive edition and is dark for two sessions after; no trend is read through the gap. §9.31 — the snapshot missed the whole US session in ONE direction on eleven of fourteen fields, none excluded; ONE finding is withdrawn BY NAME in A1.2 and two more are marked **SUPERSEDED**. §9.32 — every superlative bounded and checked against the full column BEFORE writing: Asia LNG IS the twelfth war record; Threshold B's run IS the longest of the regime; TTF is written as third-highest and expressly NOT a record; and the active contract's **$95** breach is written as the first PAIR since 20–22 May, not as a first. §9.36 and §9.41 — both oil bases quoted, no d/d constructed across the roll. §9.37 — NOT ENGAGED: no field is a carry, so all fourteen reconciliation gaps are computed. §9.39 and §9.40 — Threshold A untestable as written, no tail asserted, and the API route mandated by §9.39a recovered the coupon announcement that four editions had carried as unobtained. §9.43 — a visual render was run before delivery. §9.46 — payrolls, VRA No. 5, Baltic week 36, JMIC 094, the 8 September auction and the 9 September buyback are **PROSPECTIVE** and are kept out of the **NOT OBTAINED** register. §9.50 — re-applied on UKMTO 127-26 and on CME FedWatch, both of which remain method-bound negatives and both of which owe a further method next edition.

§9.56 — ESCALATED TO ITS SHARPEST FORM AND NOW THE LARGEST OPEN QUESTION IN THIS DOCUMENT. A TRIGGER WRITTEN ON A CONTINUATION SERIES STOPS BEING WELL-DEFINED THE MOMENT THE BASIS OPENS, AND THE FAILURE IS SILENT. The oil channel's upgrade is 'Brent above **$95** sustained'. That rule was written and applied for months in a world where CO2 and COA printed the SAME NUMBER — the basis was exactly zero for twenty consecutive sessions to 28 August. Brent rolled on 31 August, and the basis has widened on every session since: 2.12, 3.08, 3.54, 3.89. On the 3 September close the trigger falls BETWEEN the two series for a **SECOND** consecutive session: the scored continuation is **$3.37** below it and the active contract **$0.52** ABOVE it. (!) And the ambiguity is no longer about a level alone. It is now about the RULE'S OWN TEST. 'Sustained' has a settled operational meaning in this document — two consecutive confirmed closes, the test that fired US-inflation 4→5 on 31 July and cut oil 2→1 on 3 July. The active contract has now closed above **$95** twice in succession, so on that series the upgrade condition is MET IN FULL, not merely approached. **Three things follow and all three are the practice.** (a) The channel is held on the scored continuation, which is what the rule has always been applied to, and the alternative reading is published in the edition rather than buried here, because a reader checking a screen quote for 'Brent' will find the active contract. (b) The rule is NOT moved to whichever series would fire it — that is the §9.26 discipline, and this edition has just watched that discipline pay off a second time on the 5y5y. (c) The problem is disclosed as an open methodological question and NOT decided under the pressure of a fired trigger, which is the §9.16 precedent. The general form, which will recur: any threshold expressed as an absolute level on a rolling series has an undefined region as wide as the basis, and the basis is zero exactly when nobody is looking at it.

§9.51 — CARRIED FORWARD, UNCHANGED AND UNSETTLED, and now five observations deep. When a defective test is met a second time by a different mechanism, record the MECHANISM, not a verdict. §9.49 recorded Threshold B's 28 August arming as a defect: a long-end stress test tripped by an **11.14 bp** front-end move in which the 30-year contributed **1.25 bp**. On 31 August B held on a bear STEEPENER in which the 30-year contributed the largest move on the curve; on 1 September on a bear FLATTENER in which it contributed the smallest; and on 2 and 3 September on a **BULL STEEPENER** twice. (!) The written test has now returned the same answer for a bear flattener twice, a bear steepener and a **bull steepener** twice — three of the four configurations available, in both directions. **That is not ambiguity observed twice but five times, and it strengthens rather than resolves the original complaint. (!) A second observation sharpens it further: the run's margins have narrowed on each of the last two closes, so the LONGEST armed run of the regime is also its weakest.** The open question is unchanged and is not settled here: whether B should be conditioned on a long-end CONTRIBUTION rather than a long-end LEVEL.

§9.57 — NEW. **A TICKER MAP IS NOT A DEFINITION, AND A SERIES DESCRIPTION IS AN INHERITED CLAIM LIKE ANY OTHER.** This document has captioned AUTMUSAG as 'AAA all-grades retail pump' for months, in the tape, the chart, the methodology and the score grid, and has scored an entire channel on it against a **$3.52** anchor and a **$4.75** trigger. The extract's own description row says only 'US Average Gasoline Price', and AAA's published national averages cannot be reconciled to the series: AAA's headline is the REGULAR grade at **$4.1436**, the mean of its three grades is **$4.610**, and the scored series prints **$4.90**. Four rules. (a) Re-verify a series DESCRIPTION on the same schedule as an inherited news claim (§9.13, §9.23) — a description is a claim about the world, it was never checked against the vendor label, and it survived precisely because it was plausible. **(b) The failure of a description does NOT impugn the series.** AUTMUSAG is continuous, pre-dates the war, and has a stable structural spread to the DOE regular series — a war-long mean of 65.6c in a range of 51.6c to 75.9c — so it is measuring something real and consistent. (c) DO NOT RE-BASE A SCORED SERIES ON THE EDITION THAT DISCOVERS ITS LABEL IS WRONG. That is §9.21 and §9.56b: the trigger levels and the whole scored history are written on this series, and moving them under time pressure destroys the comparability that makes the channel worth anything. The gloss goes; the series stays; the score does not change. (d) Publish the irreconcilable numbers side by side with their denominators named (§9.19) and open the reconciliation as a standing item rather than closing it in one edition.

Restatements and comparability. Vendor restatements are normal and make absolute levels non-comparable across editions, though directional analysis is continuous. A contract roll does the same thing to a continuation series silently, which is why the basis check is a standing check. The dual gasoline series is never re-based: AUTMUSAG is the scored reference and preserves the **$3.52** anchor and the **$4.75** trigger; USRFRUSA is corroboration only; AAA's published headline is a third series and is never compared with either. The pre-war anchor is the 27 February 2026 close, re-verified field by field every edition; it is unchanged to date. FOUR OPEN ITEMS REMAIN DISCLOSED RATHER THAN DECIDED. (1) FIRST IN LINE AND NOW LIVE ON A COMPLETED TEST: §9.56, the oil trigger's ambiguity across the roll — **$3.37** below on the scored series, **$0.52** through on the active one, and two consecutive closes through on the active series is a sustained break by this document's own definition. (2) Threshold B's long-end LEVEL versus long-end CONTRIBUTION question, per §9.49 and §9.51, now with four observations behind it and a narrowing margin. (3) NEW: §9.57, the reconciliation of the scored gasoline series to any published construction, opened and not closed. (4) DORMANT: the US-inflation channel's firing-versus-downgrade gap, the firing trigger having now held for three closes. It is not closed — the downgrade is still **17.34 bp** lower and the break could resume. The oil channel's own separate asymmetry stands unchanged: its downgrade is written as a mediated pause AND 'a close' at or below **$72.48** while its upgrade requires a SUSTAINED break, which as written makes the downgrade easier to trip than the upgrade. It is **$19.15** away and not live.

A10 · ANCHOR AND TRIGGER LEVELS

A10.1 · Pre-war anchor — 27 February 2026 close, re-verified this edition field by field, unchanged

Brent	WTI	2Y	5Y	10Y	30Y	2s10s	5y5y	10y BE	MOVE	VIX	DXY	Gasoline scored	Gasoline DOE	Henry Hub	TTF	Asia LNG
$72.48	**$67.02**	**3.3749 %**	**3.5017 %**	**3.9375 %**	**4.6106 %**	**+55.64 bp**	**2.142 %**	**2.2569 %**	73.38	19.86	97.608	**$3.52**	**~$2.94**	**$3.063**	€31.23	¥1,669

A10.2 · Live trigger state on the 3 September close, with events to 4 September

Channel	Score	Upgrade	Downgrade	Distance
Maritime denial	5	At max	Verified reopening AND traffic above **25%** of normal for 10 sessions	NEITHER leg advanced. JMIC 093 issued (ICOD 031500Z): count 100→101, Hormuz **SEVERE**, threat levels unchanged, five vessels still held. The traffic leg is measurable but gives FOUR answers: 3 and 2 non-facilitated (S&P/SeaVision) against 44 US-facilitated over the same 48h in the SAME document; ~5 Kpler on 31 Aug vs its own ~14; 6 PortWatch on 30 Aug vs its own 85/day = **7%**. (!) On no denominator does traffic clear **25%** of normal — the nearest reading is UKMTO VRA's 22–**23%** to 27 August — so the leg fails on every basis. Blockade tally 84/3/2, dated 1 Sep
Oil price shock	2	Brent above **$95** sustained → 3	Mediated pause AND a close at or below **$72.48** → 1	**$3.37** below the upgrade on the scored CO2 close of **$91.63**, WIDENED from **$2.91** — the THIRTEENTH reading, and it moved AWAY. (!) The ACTIVE contract closed at **$95.52**, a **SECOND** consecutive close through the level, and two consecutive closes is this document's own definition of a sustained break — so on THAT series the upgrade condition is MET as written. §9.56 is at its sharpest; the rule is NOT moved (§9.26) and the channel is held on the scored continuation, which has not closed above **$95** since 24 July. Bounded: 26 such COA closes in the war, last pair 20–22 May. Downgrade **$19.15** away
US inflation impulse	5	At max — fired 4→5 on 31 Jul on a sustained break of **2.30%**	5y5y sustained at or below the **2.142%** anchor → 4	**17.34 bp** above the anchor, WIDENED from 16.76. The firing trigger HELD above **2.30%** for a **THIRD** close at **2.3154%** and by the WIDEST margin of the three — **1.54 bp**, against 1.10 and 0.96. (!) §9.26 has now paid TWICE: had the downgrade been redefined to the firing level during either break, the channel would have been moved twice and wrong twice. BE10 **9.70 bp** above its own anchor, WIDENED from 9.19, and it ROSE against a FALLING nominal
Treasury stress	5	At max	30-year close below **5.00%** WITH MOVE below 75, sustained → 4	(!) THE VOLATILITY LEG IS **SATISFIED** AGAIN — MOVE 74.68, –5.03, the first sub-75 close since 28 August, ending the three-close run above it. Yield leg fails by **24.65 bp**, NARROWED from 25.71. BOTH legs moved TOWARD the downgrade in one session — only the second time in the war, after 25 August, and §9.15 requires both to be reported. It changes NOTHING: §9.18 holds that one sub-75 close is a session, not a regime, this leg having been satisfied and given back inside one session on 5 and 7 August; and the yield leg narrowed because yields FELL, not because volatility converged

Channel	Score	Upgrade	Downgrade	Distance
Political stress	5	At max — fired on a sustained break of **$4.75**	Three consecutive AUTMUSAG closes at or below **$4.60** with no intervening print above **$4.70** → 4	**30 cents** above the condition and moving AWAY for a third edition. AUTMUSAG **BACKFILLED** UP to **$4.90** for 2 September — a **FOURTH** consecutive rise and the highest print since 2 June, expressly NOT a **war high** (**$5.18**, 20 May) — then dark on 3 and 4 September. It is also **15 cents** above the **$4.75** that fired the upgrade, so neither the downgrade at **$4.60** nor a reversal of the upgrade is in prospect. (!) The series' DESCRIPTION as 'AAA all-grades' is **WITHDRAWN** this edition (A1.5); the vendor label is 'US Average Gasoline Price'. The trigger levels and the **$3.52** anchor are UNCHANGED and the series is NOT re-based
Escalation risk	5	At max	Mediated stand-down AND talks resume → 4–3	Moved AWAY on both halves. (!) Iran struck a **FOURTH** country in a week — KUWAIT — with the Kuwaiti army itself confirming the engagement (**TIER 1**), and claimed the UAE, which has confirmed nothing. The last edition's two-day kinetic gap is **WITHDRAWN**; only its American half survives, at three days. Vance ruled out talks unless Iran halts attacks on commercial shipping — a conduct precondition. NO Omani statement on 2, 3 or 4 September on a direct check, NO Qatari activity since 27 August, NO talks scheduled by any party, and NO Iran-related US sanctions action since 28 August

A10.3 · Stage-4 thresholds — levels and live margins

	Level	State on the 3 September close	Margin
A	A coupon auction clearing with a tail above the 1pm when-issued level	**NOT ARMED** — **UNTESTABLE AS WRITTEN** (§9.39), because Treasury publishes no when-issued level. No coupon auction cleared in the window. The 13 May 30-year stop of **5.050%** is a historical marker only; the US has since term-funded at **5.216%** (13 Aug). (!) The 3 September announcement is NO LONGER UNOBTAINED: recovered from the fiscaldata auctions API (§9.39a) as a **$58**bn 3-year (8 Sep), a **$39**bn 10-year reopening (9 Sep) and a **$22**bn 30-year reopening (10 Sep), all settling 15 September. NO trend is read against August's **$25**bn: reopening vs new issue (§9.40)	30-year **19.65 bp** above the 13 May stop, from 20.71
B	30-year above **5.20%** WITH 10-year above **4.65%**	**ARMED** — a **FIFTH** consecutive close, the LONGEST armed run of the regime, taking out the four closes of 29 July–3 August. Ordinals UNCHANGED and this is NOT a new state: six armings, five lapses, ELEVEN states and TEN changes since 29 July. (!) BOTH margins have narrowed on each of the last two closes, so the longest run is also the weakest. §9.49 stays OPEN and is STRENGTHENED: under §9.51 it is now five observations deep and B has been satisfied across five closes spanning THREE distinct curve shapes — bear flattener twice, bear steepener, and **bull steepener** twice	30-year clears by +**4.65 bp** (from 5.71, from 7.30); 10-year by +**11.80 bp** (from 12.80, from 14.81)
C	MOVE above 130	**NOT ARMED**, and the direction reversed again. 74.68 is the first close below 75 since 28 August and ends the three-close run above it, restoring the Treasury downgrade's volatility leg. (!) The two anchor deviations are reported SEPARATELY and no composite is constructed (retired 1 Sep): both still sit on the SAME side — volatility ABOVE its anchor and the 30-year ABOVE its own — but the gap between them widened as volatility fell 5.03 while the yield moved **1.06 bp**	55.32 below C; 40.34 below the 115.02 **war high**. MOVE +1.30 vs its 73.38 anchor; 30-year +**63.59 bp** vs its own
