

HEADLINE JUDGMENT

Score HOLDS at 27/30 for a twenty-third consecutive edition — and it holds on one word in one rule. One. **The oil channel now has its FIRST close.** The scored Brent continuation closed **\$97.10** on 9 September, **\$2.10 ABOVE** the **\$95** upgrade, its first close through the level since 24 July. What makes this different from July is not the level but the basis: on 23 and 24 July the continuation cleared **\$95** and the active contract did not, which is precisely why no upgrade fired (\$9.36). On 9 September **BOTH** cleared — continuation **\$97.10**, active **\$101.21** — the first such close since the channel was cut to 2 on 3 July, and the first on which both cleared, of any kind, since 3 June. \$9.56 warned that a trigger level sitting **INSIDE** the basis has two defensible readings that give opposite answers; the level now sits below **BOTH** series — though the two readings still give opposite **SCORING** answers, one close against six, so \$9.56 is narrowed rather than resolved. What holds the channel at 2 is the word **sustained**: the discipline that stopped three bad calls between 25 June and 15 July requires **TWO** confirmed closes, and there is one. **A second close fires 2→3 and takes the score to 28.** The 10 September mark is **\$97.00** and its session low is **\$96.96**, both clear of the level — but a mark is not a close, and this document has been wrong exactly here. Two, and it is this document correcting itself. **TWO CLAIMS PUBLISHED ON 9 SEPTEMBER ARE WITHDRAWN, AND BOTH ARE BAD DATES INSIDE A WINDOW.** The kinetic count was published as no acknowledged US strike on Iranian soil **from 1 September** through the 8th. US forces struck Iranian radars ON 1 September and the President said so that day, so the window was wrong at its opening. Corrected: **2 through 9 September, eight days** — the same count, a shifted window, and the 9th is now ON the record rather than uncounted. And Saudi Arabia did not strike Taiz and Marib **in reply** to the 8 September barrage: the source dates those strikes to the day **BEFORE** it. A Saudi reply was promised and is **NOT SOURCED**. Three. **The curve's war high has migrated DOWN it.** The 2-, 5- and 10-year all closed at new war highs on 9 September; the 20- and 30-year did not, and have not since 17 August. The **\$39bn** ten-year cleared **4.834%** with primary dealers taking **4.31%** of competitive-accepted, against **8.6%** on 12 August. With the market priced near **56%** for a HIKE on 16 September, this is the belly repricing **POLICY**, not the long end repricing fiscal risk — a different shock wearing the same yield. Four. The gas complex again set the records the oil complex did not: TTF **€79.246** and Asia LNG **¥4,115**, both war-record closes, while Henry Hub fell to a **7.87%** discount to pre-war. Sequencing 27 → 27 → 27 → 27 → 27.

1 · LIVE TAPE

Every **MARKET** channel is scored on its last confirmed close — oil, US inflation and Treasury stress on the 9 September close, and political stress on the 8 September AUTMUSAG print, the last that series has. The two **EVENT** channels carry their own as-of dates in the \$3 grid. The 10 September row is a Singapore-MORNING mark and moves no channel. **All three standing integrity checks CLEAR.** \$9.8 clears — eighteen fields moved on the 9 September row. **\$9.35 clears on the 8th, the 9th AND the 10th rows of THIS extract:** not one identical-to-4dp field on any of the three. (!) That does not contradict A1.2, where the five-year is excluded from the reconciliation: what repeated was the 9 September **MARK** carried in the last extract, and the settled close did not. \$9.41 clears — the continuation-to-active basis widened smoothly on both crudes and showed neither a sign change nor a step, so no roll is in the data. (!) The one standing exception did NOT repair: \$9.60's three lost cells on the 7 September row are blank in a **THIRD** consecutive extract. Every row carries its Bloomberg ticker from the header scan. **Trigger notes are compressed to the 150-character house spec;** the full commentary, integrity record and reconciliation are at ANNEX A1.

1.1 · Energy

Series	BBG ticker	7 Sep	8 Sep	9 Sep close	10 Sep mark	Trigger note (full commentary at A1.3)
Brent, scored continuation	CO2 Comdty	93.16	94.38	97.10	97.00	(!) +\$2.72. \$2.10 THROUGH the \$95 upgrade — the FIRST of the two closes the rule needs. \$24.62 above the \$72.48 price leg, and the downgrade also needs a mediated pause
Brent, active contract	COA Comdty	97.00	97.92	101.21	101.19	(!) +\$3.29, a SIXTH straight close through \$95 and the first above \$100 since 22 May. Both bases now clear the level (\$9.56)
WTI, continuation — scored	CL2 Comdty	LOST	90.19	92.87	93.01	(!) +\$2.68. The 7 Sep cell is blank in a THIRD extract — the \$9.60 loss has not repaired. No trigger on WTI
WTI, active contract	CLA Comdty	LOST	93.03	96.05	96.47	+\$3.02. Basis 3.18 against Brent's 4.11; both widened, smoothly and without a step
Henry Hub natural gas	NGA Comdty	LOST	2.916	2.822	2.795	(!) −\$0.094 to 7.87% BELOW its \$3.063 anchor, widest close since 25 August. A LOADING shock, not a global one
Dutch TTF natural gas	TZTA Comdty	73.306	75.841	79.246	79.020	(!) +€3.405, a SIXTEENTH war-record close and the first above €79. +153.8% vs pre-war, the largest multiple on the tape
Japan/Asia LNG	JGLA Comdty	4,010	3,975	4,115	no print	(!) +140, a THIRTEENTH war-record close , taking out the 7 September high. +146.6% vs pre-war

1.2 · US Treasuries and inflation expectations

Levels in per cent. (!) **Three tenors closed at new war highs and two did not** — the unscored 20-year closed 5.2908 (+3.87 bp) and, like the 30-year, remains below its 17 August peak. The change column spans one settled session.

Tenor	BBG ticker	8 Sep close	9 Sep close	10 Sep mark	8→9, bp	Trigger note
2-year	USGG2YR Index	4.3936	4.4295	4.4299	+3.59	(!) A NEW WAR HIGH , taking out 4.3998 of 1 September. The policy-expectation tenor, and it led nothing — the belly did
5-year	USGG5YR Index	4.5627	4.6163	4.6182	+5.36	(!) A NEW WAR HIGH for a second consecutive close, and the largest move on the curve
10-year	USGG10YR Index	4.7882	4.8406	4.8427	+5.24	(!) A NEW WAR HIGH . Clears Threshold B's 4.65% leg by 19.06 bp, from 13.82 — the widest of the arming
30-year	USGG30YR Index	5.2454	5.2889	5.2921	+4.35	(!) NOT a record: 5.3060 of 17 August still stands. Clears 5.20% by 8.89 bp; the Treasury yield leg fails by 28.89 bp
2s10s spread	USYC2Y10 Index	39.252	40.691	41.071	+1.439	Steeper, and 14.95 bp below its anchor. (!) CORRECTED: a SEPARATE index that does NOT equal 10y minus 2y — 41.11 computed, 40.691 printed
10-year breakeven	USGGBE10 Index	2.3751	2.3879	2.3849	+1.28	Highest close since 3 June and 13.10 bp above its anchor. Resolved for a second consecutive session
5y5y forward breakeven	USGG5Y5Y Index	2.3119	2.3166	2.3118	+0.47	(!) A SIXTH close above the 2.30% firing level, clearing by 1.66 bp, the widest of the run. 17.46 bp above the anchor

1.3 · Cross-asset

Series	BBG ticker	8 Sep	Last resolved close	vs pre-war	Note
Treasury volatility (MOVE)	MOVE Index	76.14	76.74 (9 Sep)	+3.36 vs 73.38	(!) +0.60, a SECOND consecutive close above 75, so the Treasury volatility leg is lapsed for a second session and moving away. Above its pre-war anchor
Equity volatility (VIX)	VIX Index	15.72	16.46 (9 Sep)	−3.40 vs 19.86	+0.74, a second consecutive rise, and still 17.1% below its anchor. Equity vol is not pricing what the curve is
US dollar index	DXY Index	98.787	98.817 (9 Sep)	+1.21 vs 97.608	+0.030 on the day but 0.78 lower on the week , so the barrel's weekly rise is only marginally cushioned for non-dollar buyers
SOFR overnight rate	SOFRRATE Index	3.64	3.64 (8 Sep)	−0.04 vs 3.68	Blank on the 9 and 10 September rows — a genuine blank, not a carry. Below its anchor
Gasoline, retail pump — scored	AUTMUSAG Index	5.00	5.00 (8 Sep)	+1.48 vs 3.52	(!) The first print at or above \$5.00 since 28 May , and +42.0% on the anchor. 40 cents above \$4.60, and the condition needs THREE closes at or below it
Gasoline, DOE regular retail spot — corroboration	USRFRUSA Index	—	4.157 (7 Sep)	+1.22 vs −2.94	(!) RESOLVED and CORROBORATED : EIA published on 9 September for the 7 September date at \$4.157, matching the extract to the tenth of a cent

(!) **THE DIESEL RECORD RUN ENDED AND THEN RESUMED**, so the last edition is corrected in SCOPE rather than withdrawn. The run of consecutive record closes DID break on 8 September at \$5.9012, as reported. AAA then set a fresh all-time high of **\$5.9424** on 9 September, +4.12 cents — so what ended was one run, not the ascent. (!) AAA's page shows only the standing record and the previous day, so the **\$5.9015** figure published for 7 September could NOT be re-verified from the primary source and is not restated. Gasoline still does not follow: AAA regular **\$4.2245** on 9 September is **15.8%** below its own **\$5.0165** record of 14 June 2022. (!) **And the scored series does not reconcile to AAA on the same date** — AUTMUSAG **\$5.00** against AAA regular **\$4.1514** for 8 September, a gap of **84.9 cents**. **FIVE retail series, never SPLICED (\$9.19)** — different panels, grades and reference dates, with the widening AUTMUSAG spread and the open scope question, are at ANNEX A1.5.

1.5 · Strait operational — 4-row summary (the full record, every provider and every denominator, is at ANNEX A1.4)

Strand	State at the 10 September cut (each reading carries its own date)	Source
UKMTO / incidents	(!) JMIC 095 NOT OBTAINED for a THIRD edition , and the probe method is now itself corrected: JMIC products are hosted on ukmto.org , not on jmic.online , which is an unrelated academic journal and is struck from the source list. Four probes — guessed sequential filenames for 095 and 096, the 2026 index (renders 'No products to display'), and the mscio.eu mirror (stale at Update 053) — all failed. No claim is made that 095 does not exist. 094 stands: Hormuz SEVERE , overall risk SEVERE , a 30 nm standoff from US units advised, traffic expected below the 2025 baseline. (!) UKMTO's own incident pages render empty to a fetcher and are NOT OBTAINED	JMIC 094; ukmto.org probed four ways 10 Sep
Transits + blockade	(!) A TIER 2 relay reports CENTCOM's tally as having crossed 100 : more than 100 vessels redirected since April, 4 disabled and 26 humanitarian transits permitted, sustained by 15,000+ personnel — dated 9 September. The primary CENTCOM text was NOT FOUND, so these are not treated as CENTCOM's own figures. (!) Note 4 disabled here against 5 claimed destroyed on 8 September alone: different measures, never summed. FOUR TRANSIT-COUNTING UNIVERSES PLUS A FACILITATED SUBSET, NEVER SPLICED , each dated: Kpler 11 commodity crossings on 8 Sep against its own 10-day mean of 13; Windward 15 on 7 Sep, 3 of them dark, plus 38 vessels over 50 m stationary at the Larak anchorage; TankerMap 1 on 8 Sep and 0 on the 9th and 10th, tankers only; Lloyd's List ~12/day for 26 Aug–1 Sep, over 10,000 dwt; and the subset, JMIC 39 US-facilitated per 48h dated 30–31 August , nine days stale. (!) The BASELINE is disputed four ways too — 85, 100, 130 and 138 vessels/day — so no percentage of normal is quoted	Kpler, Windward, TankerMap, Lloyd's List, JMIC 092/094
CENTCOM / kinetic	(!) NO CENTCOM release dated 9 or 10 September , and this negative is published only because it survived FOUR independent probes after last edition's failure (\$9.64): the paginated index, the by-year path, the PUBLIC-RELEASES path, and DVIDS, an entirely separate host. (!) The pagination parameter is now known to be IGNORED on that index, so it is NOT a valid second probe and the negative rests on the other three. The 8 September release stands as a CLAIM: FIVE tankers destroyed, NAMED (Kaviz, Charminar, Horizon 1, Riesco, Derya), all rendered inoperable, crews warned off first. (!) TIER 1 but a party to the conflict publishing about itself, and UNCORROBORATED — the adjudicating product closes before it. (!) WITHDRAWN AND RE-DATED: no acknowledged strike on Iranian SOIL from 2 September through 9 September , eight days — the 1 September start published last edition was FALSE, US forces struck Iranian radars that day. Bound: SOIL only, EXCLUDING vessels in Iranian waters, of which two were hit near Kharg Island	centcom.mil and DVIDS probed 10 Sep; ISW 1 Sep
Diplomacy	(!) OMAN PUBLISHED ON 9 SEPTEMBER AND AGAIN SAID NOTHING ON THE STRAIT — a call with the UN Secretary-General on 'regional developments' that names neither Hormuz, nor Iran, nor a corridor, nor the IMO. A FOURTH consecutive edition with no counterparty text (\$9.23) against Iranian claims (TIER 3 state media: uncorroborated) that maps are agreed and an IMO filing is days away. The IMO end is now checked directly and is also empty : its Hormuz page carries nothing after 13 April and no Iranian submission. (!) One outlet HEADLINED that Iran had filed; its own body text says no filing had been reported , so the headline is discarded. Against the silence: Qatar said on the 8th that unconditional reopening is a regional priority, and its prime minister took the file to Wang Yi in Beijing the same day	fm.gov.om, imo.org read direct 10 Sep; Al Jazeera 8 Sep

1.6 · The US retail fuel chart (AUTMUSAG scored, navy, with the **\$4.75** level that fired this channel 4→5 on 4 August; USFRUSA weekly in amber) is RELOCATED to ANNEX A1.5a. Navy ends 8 September at **\$5.00**, amber 7 September at **\$4.157**; neither is extrapolated. (!) **Neither line is AAA regular and neither is AAA diesel (material is relocated to the annex: never deleted).**

2 · US ECONOMIC SHOCK — ANALYSIS WITH BOND YIELDS

2.1 · Bond-yield transmission, channel by channel

MARITIME DENIAL — 5/5, held. The adjudicating product is missing for a third edition, and this edition corrects the address it was being sought at.

(i) The state. The downgrade requires a verified reopening AND traffic above **25%** of normal for ten sessions. (!) 'NORMAL' STILL HAS NO SINGLE DENOMINATOR — four baselines are in circulation this week at **85, 100, 130** and **138** vessels a day — so the test is run only where one provider supplies BOTH numerator and baseline (\$9.19, \$9.24). On Kpler's own figures, **11** crossings on 8 September against a ~130/day pre-war base is under **9%**. On JMIC's, **39** facilitated transits per 48 hours against its own **138/day** 2025 baseline is about **14%** — and that numerator counts a US-facilitated SUBSET, not total traffic. No reading approaches **25%** and no reopening has been verified by anyone. (ii) The trend inside one series. Kpler is the only provider with a clean week-on-week run, and it reads **5, 11, 6, 11** against its own 10-day mean of **13** — volatile, every reading below that mean, and the latest still **15%** under it. Not recovering, and not flat either. (!) TankerMap, counting TANKERS ONLY, reads **1, 0, 0** across 8–10 September, which is a different universe and is reported beside the others rather than reconciled to them. (iii) What is new is not the count but the accumulation behind it: Windward records **38** vessels over 50 metres stationary at the northern Hormuz and Larak anchorage, most of them dark, building over several days. (!) A queue is not a transit statistic and is not treated as one, but it is the physical form the denial takes. (iv) A method correction that matters more than any number here: **JMIC products are published on ukmto.org**, and jmic.online is an unrelated academic journal. Three editions of failed retrieval were partly failures of address. 095 remains **NOT OBTAINED**, not absent.

OIL PRICE SHOCK — 2/5, held on one word. The first of the two closes the rule requires has printed, **\$2.10** through the trigger, and both bases cleared it together for the first time since the channel was cut.

(i) The scored continuation closed **\$97.10, +\$2.72, \$2.10 ABOVE** the **\$95** upgrade level. The gap sequence that this document has tracked for a fortnight — **\$3.37, \$2.68, \$1.84, \$0.62** — did not narrow again; it inverted. (ii) **Why this is not July.** The continuation also closed above **\$95** on 23 and 24 July, at **\$100.69** and **\$96.78**, and no upgrade fired — because the ACTIVE contract closed **\$94.26** and **\$91.68** on those days, below the level, and \$9.36 forbids reading a trigger across a roll. On 9 September the active closed **\$101.21**. **This is the first close since the channel was cut to 2 on 3 July on which both bases cleared \$95**, and the first close on which both cleared, of any kind, since 3 June. (!) \$9.56 disclosed, before it went live, that a level sitting INSIDE the continuation-to-active basis has two defensible readings giving OPPOSITE answers, and warned the rule's own text does not choose between them. That undefined region has closed in ONE sense only: the level now sits below BOTH series. (!) **The two readings still give OPPOSITE scoring answers** — the continuation has ONE close, the active has SIX — so \$9.56 is not resolved, and the channel is held on the scored series exactly as before. The problem was flagged while the distance was still positive, exactly as \$9.56c required, so nothing is being decided under the pressure of a fired trigger. (iii) **What holds the channel at 2 is the word sustained**, and nothing else. The discipline is two confirmed closes: it held oil at **3** on a sub-pre-war intraday on 2 July and cut to 2 only on the second close, and it held US-inflation at **3** on a 0.6 bp margin on 14 July and fired only on the second close. There is one close. (iv) The 10 September mark is **\$97.00**, and its session low so far is **\$96.96** — the whole traded range of the morning sits above the trigger. (!) That is a mark, and \$9.31 was written after an edition led on four intraday readings and withdrew all four by the next close. It is also true that the last two Singapore cuts UNDERSTATED the settle by **\$1.06** and **\$1.49**, and that only **4** of the last **30** closes fell **\$2.10** or more, which is the distance from the 9 September CLOSE to the level. **The channel is held on the rule**, not on the arithmetic, and the arithmetic is not being hidden. (v) The downgrade is **\$24.62** away and irrelevant.

US INFLATION IMPULSE — 5/5, held. A sixth close above the firing level, clearing by the widest margin of the run, with the breakeven at its highest since June.

(i) The forward closed **2.3166%**, a **SIXTH** consecutive close above the **2.30%** level whose sustained break fired this channel 4→5 on 31 July. The six clear by **1.10, 0.96, 1.54, 0.82, 1.19** and **1.66 bp** — **1.66 is the widest of the run**. (!) The run itself is NOT monotone — the six margins oscillate — so the widening is one session old, not a trend. (ii) The documented downgrade is a sustained close at or below the **2.142%** pre-war anchor, **17.46 bp** lower, and it moved further away. (!) \$9.16 and \$9.26 govern the gap between the firing level and the downgrade level and the answer is unchanged: **report the tension, do not close it**. Converting a hysteresis rule into a symmetric trigger is the change that would have produced three wrong calls between 25 June and 15 July. (iii) The corroborating series says the same thing more plainly this time. Ten-year spot compensation closed **2.3879%**, **+1.28 bp**, its highest since 3 June and **13.10 bp** above its **2.2569%** anchor. (!) One month ago this document was reporting BE10 at **0.21 bp** above that anchor and asking whether a single basis point would put spot compensation below pre-war for the first time in the war. It has instead added **13 bp**. **The inflation-expectation complex has not merely failed to normalise**; it has given back the entire mid-August normalisation — over the past MONTH, of which **1.28 bp** came on 9 September. (!) No weekly breakeven figure is computed here, and the barrel's weekly move on the scored series is **+\$5.01**. (iv) The transmission is now legible in a way it has not been: the belly of the curve, where five-year real and breakeven pricing sits, produced the largest yield move on the board.

TREASURY STRESS — 5/5, held. The war high has migrated DOWN the curve, and a ten-year cleared with almost no dealer backstop.

(i) Both downgrade legs failed and both moved further away. The yield leg needs a 30-year close below **5.00%** and the 30-year closed **5.2889%**, failing by **28.89 bp**, from 24.54. The volatility leg needs MOVE below **75** and MOVE closed **76.74**, failing by **1.74**, from 1.14 — a **SECOND** consecutive close on the wrong side after the sixth give-back of the war. (!) \$9.15's rotation does not apply: nothing rotated, both legs simply widened. (ii) **The structural finding of this edition is where the records were set and where they were not.** The 2-, 5- and 10-year ALL closed at new war highs — **4.4295%, 4.6163%, 4.8406%** — while the 20- and 30-year did NOT, and have not exceeded their **17 August** peaks of **5.3016%** and **5.3060%** in sixteen sessions. The moves were **+3.59, +5.36, +5.24, +3.87** and **+4.35 bp** by tenor: **the belly led and both wings lagged**. (!) This is NOT a monotone shape and is not described as one; the 2s10s STEEPENED **1.44 bp** on the day while the 5s30s flattened. (iii) Why it matters. For most of this war the long end led, which is the signature of a term-premium and fiscal-supply story. A belly-led selloff that leaves the 30-year **1.71 bp** short of a three-week-old high is the signature of a POLICY story — and

the market is priced near **56%** for a 25 bp HIKE on 16 September, down from about **66%** on 31 August, on a target range of **3.50–3.75%**. **A curve pricing a central bank into an oil shock is a different transmission from a curve pricing a fiscal risk premium, and it wears the same yield.** (iv) The supply evidence points the same way. The **\$39bn** ten-year reopening cleared **4.834%** on 9 September against **4.683%** on 12 August, with bid-to-cover **2.71** against 2.53 and indirects **79.18%** of competitive-accepted against 76.7%. **Primary dealers took 4.31%.** On 12 August they took **8.6%**. (!) The denominators are named because they differ: on total award ex-SOMA the same indirect figure is **78.98%** (\$9.40). (!) **NO TAIL IS ASSERTED** — Treasury publishes no when-issued level, so a tail is not computable from primary data (\$9.39). The paper cleared **15.1 bp** higher than the August auction that was itself reported as the highest ten-year stop since 2007, and it cleared it with the dealer backstop halved.

POLITICAL STRESS — 5/5, held. The scored series printed a five-dollar handle for the first time since May, and its spread to the corroborating series set a war record.

(i) AUTMUSAG resolved at **\$5.00** for 8 September, **+7 cents**, its **first print at or above \$5.00 since 28 May** and **18 cents** below its own **\$5.18** peak of 20 May. It is **+42.0%** on the **\$3.52** anchor, **25 cents** above the **\$4.75** level that fired this channel 4→5 on 4 August, and **40 cents** above the **\$4.60** downgrade condition — which needs THREE consecutive closes at or below it with no intervening print above **\$4.70**, and is therefore not remotely live. The 9 and 10 September cells are blank. (ii) **The \$9.57 reconciliation moved this edition**, and it moved against the series. Recomputed over the **36** dates since 5 January on which AUTMUSAG and the DOE regular series BOTH resolved, their spread means **64.7 cents** and ranges **51.6 cents** (16 February) to **77.3 cents** (7 September) — a new maximum, and the **NINTH** consecutive weekly widening. (!) The **65.6-cent** mean and **75.9-cent** top carried since 4 September were computed over a window this document never stated, so the two are not comparable and neither is called wrong; the window and the count are stated here so that the next edition can test it. **A structural spread that widens for nine straight observations is not stable**, and the description of the scored series remains WITHDRAWN and unreplaced. (iii) The same-date gap to AAA is now measurable rather than merely asserted: AUTMUSAG **\$5.00** against AAA regular **\$4.1514** for 8 September, **84.9 cents** apart, with AAA diesel at **\$5.9012** the same day. The scored series sits between the two AAA grades and matches neither. (iv) (!) **And the record this channel could not see has resumed.** AAA diesel set an all-time high of **\$5.9424** on 9 September, one session after the print this document reported as the end of the run. \$9.61 stands: AUTMUSAG is a GASOLINE series measuring gasoline correctly, and whether a distillate belongs in this channel is a SCOPE question that is left open rather than settled here.

ESCALATION RISK — 5/5, held. Two of this document's own dates were wrong, the theatre widened to a fourth country, and the mediator has now been silent on the strait for four editions.

(i) (!) **THE KINETIC WINDOW PUBLISHED LAST EDITION WAS WRONG AT ITS START DATE AND IS WITHDRAWN.** This document published 'no acknowledged US strike on Iranian SOIL from 1 September through 8 September, an eighth day'. **US forces struck Iranian radars on 1 September** — the President said so on the record that day, and CENTCOM tied the strikes to IRGC attempts on shipping. The corrected window is **2 September through 9 September**: the same eight days, shifted one, with the 9th now ON the record rather than uncounted because two independent conflict trackers report it clean. **10 September is unreported at the cut and is NOT counted.** (!) The claim is bounded to SOIL and EXCLUDES strikes on vessels in Iranian waters — there were at least two near Kharg Island, on 5 and 8 September. (ii) (!) **THE SECOND WITHDRAWAL IS ALSO A DATE.** This document said Saudi Arabia struck Taiz and Marib 'in reply' to the 8 September barrage. The source dates the Saudi strikes on al-Jawf, al-Bayda, Marib and Taiz to the day BEFORE it. They did not answer the barrage; they preceded it. A Saudi response was promised in the words 'all necessary measures' and **NO retaliatory target or date has been sourced.** (iii) What genuinely widened. Iran fired **20** ballistic missiles at **Al-Azraq air base in JORDAN** overnight on 8–9 September — Jordan reports **18** intercepted, two down in open ground, no casualties. That is a fourth country taking fire. (!) On 9 September the IAEA Board also referred Iran to the UN Security Council, reported as the first such referral in twenty years; **the vote count is NOT FOUND** and none is asserted. Iran also attacked ten vessels near the strait and claims hits on two US destroyers (TIER 3 state media: uncorroborated). (iv) The exchange is now explicitly transactional: the Secretary of State said on 9 September that 'for every time they try to hit US Navy ships, they're going to lose tankers'. Eight Iranian vessels are claimed destroyed in two exchanges. (v) **The mediator is missing for a FOURTH edition**, and the negative is now checked at both ends. Oman published on 9 September — a call with the UN Secretary-General on 'regional developments' naming neither Hormuz, nor Iran, nor the IMO. The last Oman–Iran joint statement remains **25 August**, and it does commit to a joint temporary corridor with phased mine-clearing — but it contains **no mention of IMO registration.** (!) The IMO end is checked directly this edition: its Hormuz page carries nothing after **13 April** and no Iranian submission. Against that, the one live diplomatic thread is Qatari and Chinese, not Omani. (vi) And the President said on 9 September that talks 'could happen' but that the war would end 'immediately' after the November midterms — a timetable, offered by a principal, that runs to the 3 November midterms — **54 days**, under eight weeks.

2.2 · Stage-4 thresholds

	Test	State on the 9 September close
A	A Treasury auction clearing with a tail above its when-issued level	NOT ARMED — UNTESTABLE AS WRITTEN , unchanged and stated in the \$9.39 form because the test cannot discriminate, not because it ran and failed. Treasury publishes no when-issued level, so no tail is computable from primary data; wire copy is not a substitute. (!) What IS readable is the composition , and it moved a long way. The \$39bn ten-year reopening of 9 September cleared 4.834% , bid-to-cover 2.71 , indirects 79.18% and primary dealers 4.31% of competitive-accepted — against 4.683% , 2.53 , 76.7% and 8.6% on 12 August. The TEN-YEAR dealer take has halved month on month, 8.6% to 4.31% . (!) No composition is published here for the 13 August 30-year, so no second auction is claimed. The \$58bn three-year of 8 September cleared 4.474% , cover 2.72 , dealers 10.91% . (!) All shares are on the COMPETITIVE-ACCEPTED denominator; on total award ex-SOMA the ten-year indirect share is 78.98% (\$9.40). SOMA add-on was zero at both auctions . (!) The \$22bn 30-year reopening is scheduled for 13:00 ET on 10 September and had NOT auctioned at this cut — result fields are null in the primary API. It is a REOPENING at a 5.125% coupon and is NOT comparable with the \$25bn new issue of 13 August
B	30-year above 5.20% WITH 10-year above 4.65%	ARMED, and the run EXTENDS to an EIGHTH close on one arming — 28 and 31 August, then 1, 2, 3, 4, 8 and 9 September, with 7 September excluded because a shut market wrote no close (\$9.58). (!) Both legs cleared by their widest margins of this arming : the 30-year by 8.89 bp , from 4.54, and the ten-year by 19.06 bp , from 13.82. The clearance sequence on the long leg reads 0.56, 4.23, 7.30, 5.71, 4.65, 4.23, 4.54, 8.89 . (!) This document has said for a fortnight that 4.65% and 5.20% are the middle of the distribution rather than its edge , on the evidence of five in-and-out cycles each decided by under 6 bp. An eighth consecutive close, and a one-session jump to the widest margin of the arming, is the first evidence AGAINST that reading. (!) The sequence itself is NOT monotone, and it is recorded as such rather than absorbed into it
C	MOVE above 130	NOT ARMED. 76.74, some 53.26 points below , and the war high of 115.02 was set on 26 March. (!) The figure that carries information is not the distance to C but the direction: MOVE has now closed above its 73.38 pre-war anchor for a second session while the 30-year sits 67.83 bp above its own. For most of August the pairing was the opposite — a fully normalised expectation of movement around a yield that had not normalised at all. That divergence is closing from the volatility side , which is the less reassuring of the two ways it could close

2.3 · Cross-asset macro record — compressed

The full record, with every source dated and tiered, is at **ANNEX A2.3**. In brief. **The EIA published its Short-Term Energy Outlook on 9 September** and it is already behind the tape: it forecasts Brent near **\$90** for 2H2026 against a **\$97.10** scored close and a **\$101.21** active close the same day, because its own forecast was completed on **3 September**, before the week's rally, which was **+\$5.01** on the scored series. (!) Its supply numbers are the ones to keep: **crude production shut-ins averaged 6.7 mb/d in August**, up from 5.0 mb/d in July, with **5.7 mb/d** forecast for Q4 — (!) so the same forecast has shut-ins EASING **1.0 mb/d** from the August peak: the deterioration is realised, the improvement is forecast — and most flows not restored until Q2 2027. **The Weekly Petroleum Status Report was delayed by Labor Day to 12:00 ET on 10 September and had NOT published at this cut**, so \$9.28's import-reversion test — whether crude imports hold near **7.3 mb/d** or revert to **6.3** — is unresolved for a SECOND cycle; the last print is **6.77 mb/d** for the week ended 28 August. The September IEA report is due **11 September** and the OPEC MOMR could not be retrieved at all. (!) **The 0.07 mb/d effective OPEC spare-capacity figure has now failed re-verification twice and is RETIRED rather than carried**: no primary source supports it this cycle, and the nearest available number is a third-party rendering of EIA data showing **0.00 mb/d** for an observation month of May 2026, which is four months stale and not the same measurement (\$9.19). **Gas is the clearest attribution on the tape**: QatarEnergy has extended force majeure on LNG cargoes into the autumn and EU storage is near **66%** against a five-year seasonal norm around **80%**, which is why TTF set a record while Henry Hub fell — US inventories run **5.2%** above their five-year average on production near **112.9 Bcf/d**. (!) TTF is quoted three ways this week — **€79.246** on the scored series, **€77.90** on a front-month continuous quote and a headline 'above €80' — and they are NOT averaged. On the calendar: August PPI at 08:30 ET on **10 September**, CPI on **Friday 11 September**, and the FOMC on **15–16 September** priced near **56%** for a hike.

3 · SHOCK SCORE

27 / 30 — CRISIS band (22–30). Held for a twenty-third consecutive edition. No channel moved, and one is a single close from moving. Every MARKET channel is scored on its last confirmed close — oil, inflation and Treasury stress on 9 September, political stress on the 8 September AUTMUSAG print, the last that series has. The two EVENT channels carry their own as-of dates below. (!) The run of **23** counts EDITIONS at this score, not calendar days: the score reached 27 on 4 August and 22 editions have been published since. \$2.1 carries the detail, A10.2 the full trigger state.

Channel	Score	Basis, with its as-of date	Distance to a change
1 · Maritime denial	5	At the cap. No verified reopening by any provider; traffic under 9% of normal on Kpler's own base, 8 Sep, and about 14% on JMIC's, dated 30–31 Aug. (!) Different numerators AND bases	Downgrade needs a verified reopening AND ten sessions above 25%. Neither leg has a candidate
2 · Oil price shock	2	(!) ONE confirmed close above the trigger. CO2 \$97.10, \$2.10 through \$95; COA \$101.21. Both bases cleared together for the first time since 3 July	ONE further close above \$95 fires 2→3 and takes the score to 28. The 10 Sep mark is \$97.00. Downgrade \$24.62 away
3 · US inflation impulse	5	At the cap. 5y5y 2.3166%, a sixth close above the 2.30% firing level, clearing by 1.66 bp, the widest of the run. BE10 highest since 3 June	Downgrade needs a sustained close at or below 2.142%, now 17.46 bp lower and further away
4 · Treasury stress	5	At the cap. War-high closes at the 2-, 5- and 10-year; the 20- and 30-year still short of 17 August. Ten-year cleared 4.834% on a 4.31% dealer take	Both legs failed and both widened: 30-year by 28.89 bp, MOVE by 1.74 on a second close above 75
5 · Political stress	5	At the cap. AUTMUSAG \$5.00 (8 Sep), a first five-dollar handle since 28 May, +42.0% on the anchor. AAA diesel set a fresh record on the 9th. (!) The series DESCRIPTION is WITHDRAWN and unreplaced (\$9.57): the level is scored, the label is not	Downgrade needs THREE closes at or below \$4.60, now 40 cents below the last print
6 · Escalation risk	5	At the cap. Iran struck a base in JORDAN, a fourth country; eight Iranian vessels claimed destroyed in two exchanges; the mediator silent on the strait a fourth edition. As of 9 Sep	Downgrade needs a mediated stand-down with talks resumed. The only live thread is Qatari and Chinese

Read the composition, not the total (\$9.7, \$9.27). Five of six channels sit at the ceiling, so the total cannot register a war that widened to Jordan, a sixteenth gas record, three war-high yields, a ten-year absorbed with the dealer backstop halved, or a scored gasoline series back above five dollars. (!) **The exception is the one channel with room,** and once again it is a MARKET channel rather than the geopolitics that is about to move the number, as it was on 31 July and 4 August. The saturated scale hid deterioration on 30 July and improvement on 14 August; here it is still hiding the five items above, but the one channel that can move is the one being tested.

4 · WHAT HAS CHANGED SINCE THE 9 SEPTEMBER EDITION

#	Change	Significance
1	The oil trigger has its first close. CO2 \$97.10, \$2.10 through \$95, the first close above it since 24 July	One more close fires the only channel with room. The rule needs two and this document will not shorten it
2	Both bases cleared \$95 together — COA \$101.21 — for the first time since the channel was cut to 2 on 3 July	Closes \$9.56's undefined region. The July closes did not fire precisely because the active was below the level
3	(!) Two claims WITHDRAWN, both bad dates in a window: the kinetic count began a day early, and the Saudi strikes preceded the barrage rather than answering it	A window is a figure (\$9.65). Corrected: 2–9 September , eight days; and no Saudi reply is sourced
4	The war high migrated down the curve. New highs at the 2-, 5- and 10-year; the 20- and 30-year still short of 17 August	A belly-led selloff prices POLICY, not term premium. The market is near 56% for a hike on 16 September
5	The \$39bn ten-year cleared 4.834% with primary dealers taking 4.31%, against 8.6% on 12 August	Two long-end auctions in a month absorbed with the dealer take halved, at a stop 15.1 bp higher
6	TTF €79.246 and Asia LNG ¥4,115, a sixteenth and a thirteenth war-record close, while Henry Hub fell to 7.87% below pre-war	QatarEnergy force majeure and 66% EU storage. (!) The divergence is the strongest single piece of EVIDENCE for a routing shock, not proof: the TTF leg is partly non-Hormuz
7	AUTMUSAG \$5.00, first five-dollar handle since 28 May; its spread to the DOE series set a war record of 77.3 cents on a ninth straight widening	The channel is nowhere near a downgrade, and \$9.57's reconciliation moved AGAINST the scored series
8	(!) Two further corrections of this document's own record: JMIC products are published on ukmt.org, not jmic.online, which is an unrelated journal and is struck from the source list; and the EIA retail print was delayed to 9 September, not the 10th this document predicted	A source ADDRESS and a calendar date are both figures (\$9.65). Three editions of failed JMIC retrieval were partly failures of address
9	(!) The 0.07 mb/d spare-capacity figure is RETIRED after a second failed re-verification; the WPSR import test is unresolved for a second cycle	(!) \$9.19 requires retraction on the FIRST failure; carrying it once past that was wrong on this document's own rule

5 · SCENARIO MAP

Scenario	Prob.	Content	Shift and why
Full war — sustained multi-front exchange	40	The theatre took in a fourth country: 20 ballistic missiles at Al-Azraq in Jordan, eight Iranian vessels claimed destroyed in two exchanges, and an explicitly transactional exchange rate stated by the Secretary of State	+2. Jordan is new, and the IAEA referral of Iran to the Security Council, a first in twenty years, removes a rung from the de-escalation ladder

Scenario	Prob.	Content	Shift and why
Deal collapse — corridor talks fail outright	35	A fourth edition with no Omani text on the strait against Iranian claims that maps are agreed and an IMO filing is days away. The IMO's own page carries nothing after 13 April	Unchanged. (!) This document does not move a probability on silence alone (\$9.23), so there is nothing for the new thread to offset; the Qatari and Chinese channel is recorded and is not yet a counterparty text
Regional relapse — Gulf infrastructure degraded	17	The Jizan refinery, 400,000 b/d, remains affected after the 8 September barrage. (!) It was ALREADY offline, so no incremental barrel loss is asserted , and the attacks were Houthis	Unchanged. The line was rewritten last edition to need a SUSTAINED widening; one barrage on already-damaged plant does not meet it
Contained but violent — the present state persists	6	Eight days with no acknowledged strike on Iranian soil, and a strait that is neither closed to everything nor open to anything	–1. Paid to the full-war line. A containment reading is harder to hold with the barrel ONE confirmed close from firing the only channel with room. (!) This is the single place the reconciliation inference at A1.2 is allowed to bear, and it moves no score
Mediated pause — verified stand-down and talks	2	No convened talks, no counterparty text, and a principal saying on 9 September that the war ends after the November midterms	–1. A 54-day timetable to the 3 November midterms, offered by a party to the conflict, is not a pause; it is a date, and it is outside every horizon this map runs to

Sums to 100. (!) **THREE lines moved: full war +2, contained –1, mediated pause –1.** Both reductions are paid into the escalation line rather than to each other: probability moved OUT of the two readings that require the present state to persist and INTO the one that names what actually happened this window. (!) The deal-collapse line is held DELIBERATELY flat despite a fourth edition of Omani silence, because this document does not move a probability on silence alone (\$9.23). The Qatari and Chinese thread is the first new mediation channel in three weeks and is recorded, not scored.

6 • WATCHLIST • NEXT 24–72 HOURS

#	Watch item	Why it matters
1	The 10 September Brent close. The mark is \$97.00 and the session low \$96.96	A second close above \$95 fires oil 2→3 and the score to 28/30 — the first channel move since 4 August. A close below returns the count to zero
2	The \$22bn 30-year reopening at 13:00 ET on 10 September , coupon 5.125%	Read the dealer take against the ten-year's 4.31%. (!) A REOPENING, so it is not comparable with the \$25bn new issue of 13 August, and no tail will be asserted
3	The delayed WPSR at 12:00 ET on 10 September , and the IEA report on the 11th	\$9.28's test, unresolved for two cycles: do crude imports hold near 7.3 mb/d or revert toward 6.3? The last print is 6.77
4	August CPI on Friday 11 September , then the FOMC on 15–16 September	A hike is priced near 56%, down from 66% on 31 August. The belly set war highs into that pricing; CPI is what confirms or breaks it
5	Whether Oman or the IMO publishes ANY text on the strait	Four editions of Iranian claims with no counterparty word. (!) The negative is now probed at both ends, so a single publication falsifies it (\$9.23)
6	Whether the Saudi reply to the 8 September barrage materialises , and whether Jordan is struck again	'All necessary measures' was promised and nothing is sourced. A second Jordanian strike would confirm the widening the map just paid for

\$7 source log, \$8 update protocol and \$9 methodology are NOT printed here. They are carried IN FULL in the companion ANNEX as A7, A8 and A9 — (!) A9.3 is rewritten this edition and is not verbatim, together with A1 (the full tape commentary, the integrity record, the reconciliation and the five retail series), A2.3 (the full macro record) and A10 (anchors, trigger levels and the live trigger state). Nothing is cut: material is relocated and cited by section.
