

HEADLINE JUDGMENT

The score moves for the first time since 4 August. The oil channel fires 2→3 and the total goes to **28/30**, ending a hold at 27 that ran twenty-three editions from 4 August. The rule asked for two confirmed closes above **\$95** and it has two: the scored Brent continuation closed **\$97.10** on 9 September and **\$102.72** on 10 September, and the 10 September session low of **\$96.14** never came back to the level. The active contract has seven such closes. \$9.56 — the largest open methodological problem this document was carrying — is **RESOLVED rather than narrowed**: the trigger now sits below BOTH series, and 9 and 10 September are the only closes since the channel was cut to 2 on 3 July on which both bases cleared \$95. Nothing was moved to make this fire: the **\$95** level is the one restated on 14 August, the series is the one the rule has always been written on, and the two-close reading of sustained is the one applied since 3 July. Two. **The channel fired on the OTHER chokepoint.** The move was not Hormuz. Houthi forces took the Red Sea port of **Mokha** on 10 September, putting **Bab el-Mandeb** — the outlet Saudi Arabia has been using around a denied Hormuz — under threat from the shore, and Riyadh told OPEC the same morning that its August crude output was **6.238 mb/d, the lowest since 1990**, down **1.9 mb/d** on the month. Brent rose **\$5.62** on the scored series — a big move and **not** a record, the eleventh largest of the war — and **\$6.42** on the active, which IS that series' second-largest one-day rise of the war. Three. **This document's own reading of one session ago is SUPERSEDED and is named rather than dropped.** The 10 September edition said the war high had migrated DOWN the curve, because the 20- and 30-year would not make new highs. On the 10 September close every tenor did, the 20- and 30-year taking out 17 August for the first time in sixteen trading sessions, and the two-year rose **15.61 bp — the largest one-day rise at that tenor in the whole war.** Four. **The auction points away from the long end.** The **\$22bn** 30-year reopening stopped THROUGH its when-issued by **2.7 bp** at **5.308%**, with primary dealers taking **2.21%**, the lowest on record. The selloff was the 08:30 PPI — **+5.4%** year on year, the highest of 2026, diesel **+24.1%** on the month — not indigestion. **August CPI is PROSPECTIVE at this cut.** Five. CENTCOM's five-tanker claim is **CORROBORATED**: JMIC 095 was obtained after three editions of failure and carries all five by name and UKMTO reference. Sequencing 27 → 27 → 27 → 27 → **28**.

1 · LIVE TAPE

Every **MARKET** channel is scored on the **10 September close** — oil, US inflation and Treasury stress — except political stress, whose series last resolved on the **9 September** AUTMUSAG print. The two **EVENT** channels carry their own as-of dates in the \$3 grid. The 11 September row is a Singapore-MORNING mark and moves no channel. **\$9.8 clears** — eighteen fields moved on the 10 September row. **\$9.41 clears**: the continuation-to-active basis widened smoothly on both crudes, 4.11 to 4.91 on Brent and 3.18 to 4.08 on WTI, with neither a sign change nor a step, so no roll is in the data. (!) **\$9.35 FIRES on ONE field and it is SOFR**: the 9 September cell was blank last extract and has BACKFILLED to 3.64, identical to the 8th to four decimal places. It is an overnight benchmark that routinely repeats, it is the least informative field the test can fire on, and **no conclusion in this edition rests on it** — but the test fired and is reported. (!) \$9.60's three lost cells on the 7 September row are blank in a **FOURTH** consecutive extract. Every row carries its Bloomberg ticker from the header scan. **Trigger notes are compressed to the 150-character house spec**; the full commentary, integrity record and reconciliation are at ANNEX A1.

1.1 · Energy

Series	BBG ticker	8 Sep	9 Sep	10 Sep close	11 Sep mark	Trigger note (full commentary at A1.3)
Brent, scored continuation	CO2 Comdty	94.38	97.10	102.72	102.61	(!) +\$5.62. The SECOND confirmed close above \$95 , so the oil channel FIRES 2→3. \$7.72 through the level; session low \$96.14 never returned to it
Brent, active contract	COA Comdty	97.92	101.21	107.63	107.78	+\$6.42, a SEVENTH straight close through \$95 and the highest since 4 May. Both bases clear together for a second close, so \$9.56 is RESOLVED
WTI, continuation — scored	CL2 Comdty	90.19	92.87	98.40	98.26	+\$5.53, the highest close since 19 May. No trigger is written on WTI; it corroborates the Brent move and does not score it
WTI, active contract	CLA Comdty	93.03	96.05	102.48	102.54	+\$6.43 and back above \$100. (!) The wire tape quotes COA and THIS contract, not the scored pair — a \$4.91 and \$4.08 difference, never merged
Henry Hub natural gas	NGA Comdty	2.916	2.822	2.834	2.835	+\$0.012, and still 7.48% BELOW its \$3.063 anchor. The only energy series under pre-war: a LOADING shock, not a global one
Dutch TTF natural gas	TZTA Comdty	75.841	79.246	82.047	82.055	(!) +€2.801, a SEVENTEENTH war-record close and the first above €82. +162.7% vs pre-war, the largest multiple on the tape
Japan/Asia LNG	JGLA Comdty	3,975	4,115	4,198	no print	(!) +83, a FOURTEENTH war-record close , taking out the 9 September high. +151.5% vs pre-war

1.2 · US Treasuries and inflation expectations

Levels in per cent. (!) **ALL FIVE tenors closed at new war highs**, and the change column falls monotonically with tenor: **+15.61, +14.55, +12.20, +10.07, +7.63** bp. That is a clean bear flattener — the front led. The change column spans one settled session.

Tenor	BBG ticker	9 Sep close	10 Sep close	11 Sep mark	9→10, bp	Trigger note
2-year	USGG2YR Index	4.4295	4.5856	4.5767	+15.61	(!) A NEW WAR HIGH , and the LARGEST one-day rise at this tenor of the entire war , past 13.27 bp on 17 June. The policy tenor led
5-year	USGG5YR Index	4.6163	4.7618	4.7605	+14.55	A NEW WAR HIGH for a third consecutive close, and the second-largest move on the curve
10-year	USGG10YR Index	4.8406	4.9626	4.9649	+12.20	A NEW WAR HIGH , and the second-largest one-day rise of the war at this tenor. Clears Threshold B's 4.65% leg by 31.26 bp, from 19.06
20-year, unscored	USGG20YR Index	5.2908	5.3915	5.3994	+10.07	(!) A NEW WAR HIGH , taking out 5.3016 of 17 August after sixteen trading sessions
30-year	USGG30YR Index	5.2889	5.3652	5.3738	+7.63	(!) A NEW WAR HIGH , past 5.3060 of 17 August. Clears 5.20% by 16.52 bp; the Treasury yield leg fails by 36.52 bp and widened
2s10s spread	USYC2Y10 Index	40.691	37.496	38.606	-3.195	Flatter, and 18.14 bp below its anchor. A separate index that does NOT equal 10y minus 2y (\$9.69): 37.70 computed, 37.496 printed
10-year breakeven	USGGBE10 Index	2.3879	2.4165	2.4122	+2.86	Highest close since 21 May and 15.96 bp above its anchor. Compensation carried only 2.86 bp of the ten-year's 12.20, under a quarter — the selloff was mostly REAL rate
5y5y forward breakeven	USGG5Y5Y Index	2.3166	2.3295	2.3256	+1.29	(!) A SEVENTH close above the 2.30% firing level, clearing by 2.95 bp, the widest of the run, and the highest since 20 August

1.3 · Cross-asset

Series	BBG ticker	9 Sep	Last resolved close	vs pre-war	Note
Treasury volatility (MOVE)	MOVE Index	76.74	82.09 (10 Sep)	+8.71 vs 73.38	(!) +5.35, a THIRD consecutive close above 75 and the highest since 31 July. The volatility leg now fails by 7.09, from 1.74 — four times the miss in one session
Equity volatility (VIX)	VIX Index	16.46	17.84 (10 Sep)	-2.02 vs 19.86	+1.38, a third consecutive rise and the highest since 29 July, but still 10.2% below its anchor. Equity vol is following the curve at a distance
US dollar index	DXV Index	98.817	99.048 (10 Sep)	+1.44 vs 97.608	+0.231, and only +0.140 on the week — a far smaller move than the front end's. (!) The dollar barely cushions the barrel's rise for non-dollar buyers
SOFR overnight rate	SOFRRATE Index	3.64 (8 Sep)	3.64 (9 Sep)	-0.04 vs 3.68	(!) BACKFILLED into the 9 September cell and identical to the 8th to 4dp, so \$9.35 fires here and only here . Blank on the 10 and 11 September rows
Gasoline, retail pump — scored	AUTMUSAG Index	5.00 (8 Sep)	5.05 (9 Sep)	+1.53 vs 3.52	(!) +5 cents, the highest since 27 May , when it last printed exactly \$5.05 — so it MATCHES rather than exceeds. 45 cents above the \$4.60 condition
Gasoline, DOE regular retail spot — corroboration	USRFRUSA Index	—	4.157 (7 Sep)	+1.22 vs ~2.94	Unchanged: a WEEKLY series whose next print is 14 September. (!) So \$9.57's spread is not extended and not reversed this edition — it is UNTESTED

(!) **DIESEL SET A SECOND CONSECUTIVE ALL-TIME RECORD AND A SEPARATE NATIONAL SERIES CROSSED SIX DOLLARS**. AAA diesel closed **\$5.9773** on 10 September, **+3.49 cents** on the fresh record of the 9th, and is **2.27 cents** short of \$6.00. On the same day GasBuddy's own national diesel average **crossed \$6.00 for the first time on record**. (!) **These are DIFFERENT PANELS and are never spliced** (\$9.19): with AUTMUSAG, AAA regular, AAA diesel, the DOE weekly and GasBuddy, this tape now tracks **FIVE** retail series on four bases. Gasoline still does not follow the distillate: AAA regular **\$4.2770** on 10 September, **+13.3 cents** on the week, remains **14.7%** below its own **\$5.0165** record of 14 June 2022. (!) The same-date gap between the scored series and AAA regular **NARROWED to 82.6 cents** — AUTMUSAG \$5.05 against AAA regular \$4.2245 for 9 September — from 84.9 cents a day earlier. The five series, the \$9.57 spread and the open scope question are at ANNEX A1.5.

1.5 · Strait operational — 4-row summary (the full record, every provider and every denominator, is at ANNEX A1.4)

Strand	State at the 11 September cut (each reading carries its own date)	Source
UKMTO / incidents	(!) JMIC 095 IS OBTAINED , closing a negative this document carried for three editions, and the corrected address — ukmt0.org, not jmic.online — is what found it. ICOD 101500Z. The count is no longer frozen : 101 → 109 since 1 March. (!) Its own arithmetic does not close : 095 says '7 incidents since the last report' against 094's 101, and 101+7 is 108, not 109. Both figures are quoted verbatim and NEITHER is adjusted . (!) The mine language CHANGED : 094 asked for vigilance for 'mining activity in the area'; 095 asks for vigilance for ' attempted mining activity within and adjacent to the TSS ' — narrower in geography, and it does NOT say the mines are gone. Hormuz SEVERE ; Bab el-Mandeb and the Gulf of Aden SUBSTANTIAL ; traffic 'expected to remain at reduced levels, compared to the 2025 baseline'	JMIC 095, ICOD 101500Z, read direct
Transits + blockade	FOUR ATTRIBUTED COUNTING UNIVERSES, NEVER SPLICED, each dated: Kpler 10 vessels/day on a 10-day mean at 9 Sep, its lowest since May, against its own pre-war base above 130 — under 8% ; UKMTO 59 ships in 48 hours to 9 Sep 0500 ET, which is a REPORTING universe and not a transit count; Windward 16 on 8 Sep, 2 of them dark; Lloyd's List ~12/day for 26 Aug–1 Sep, over 10,000 dwt, now stale. (!) A tracker reports single digits on 10 Sep against 12 the day before, provider unattributed and flagged preliminary by its own publisher — recorded, not scored. Blockade tally at 9 Sep: 100+ redirected, 4 disabled , 26 humanitarian transits permitted. The QUEUE is the physical form: 42 tankers waiting at 7 Sep, 18 of them carrying about 11.1 mn bbl	Kpler, UKMTO, Windward, Lloyd's List, straits.live
CENTCOM / kinetic	(!) THE 8 SEPTEMBER FIVE-TANKER CLAIM IS NOW CORROBORATED . JMIC 095 carries all five with UKMTO references, and attributes FOUR of them to U.S. forces — (!) HORIZON 1 carries NO attribution in its text, so the corroboration is five vessels wide and the attribution four: 128-26 HORIZON 1 (LPG, projectile to the stern, fire, crew evacuated, 3,177 MT aboard) and 129-26 A–D DERYA, KAVIZ, CHARMINAR, RIESCO , RIESCO having subsequently SUNK. (!) The A/B/C/D are NATO phonetic SUB-REFERENCES to UKMTO 129-26 and are NOT parts of the vessel names . (!) One divergence survives: CENTCOM says destroyed , JMIC says disabled , and only one sank. Three further incidents: 130-26 HERCULES STAR, 9 Sep, one dead and one missing ; 131-26 NEW ANDROS, 9 Sep; and 132-26 GLAMOR, a cargo ship BOARDED on 10 Sep. NO CENTCOM release dated 9, 10 or 11 September — the newsroom's three September items are the 1st, 5th and 8th	JMIC 095; centcom.mil read direct 11 Sep
Diplomacy	(!) THE IAEA VOTE COUNT IS FOUND , closing last edition's NOT FOUND: 23 in favour, 3 against, 8 abstentions , 1 not voting on 9 September, the three against being Russia, China and Niger . (!) The act, stated precisely: a resolution tabled by the US, UK, France and Germany asking the Director General to report the matter to the Security Council , which is what is reported as the referral. (!) And the file acquired its first HARD DATES . The Council met on 10 September: the 1737 Iran Sanctions Committee has been blocked for a fourth consecutive quarter ; the vote on the expert panel's mandate is set for 17 September and the mandate EXPIRES 27 September . (!) Against that, Oman published nothing on the strait for a FIFTH consecutive edition (§9.23), and no Omani, Qatari or US mediation text dated 10 or 11 September could be sourced	IAEA/UNSC reporting 9–10 Sep; Oman probed 11 Sep

1.6 · The US retail fuel chart (AUTMUSAG scored, navy, with the **\$4.75** level that fired the political channel 4→5 on 4 August; USRFRUSA weekly in amber) is RELOCATED to ANNEX A1.5a. Navy ends 9 September at **\$5.05**, amber 7 September at **\$4.157**; neither is extrapolated. (!) **Neither line is AAA regular**, neither is AAA diesel and neither is GasBuddy — the series that crossed six dollars is on none of them (material is relocated to the annex: never deleted).

2 · US ECONOMIC SHOCK — ANALYSIS WITH BOND YIELDS

2.1 · Bond-yield transmission, channel by channel

MARITIME DENIAL — 5/5, held. The adjudicating product arrived after three editions of failure, and it unfroze a count that had not moved since 5 September.

(i) The state. The downgrade requires a verified reopening AND traffic above **25%** of normal for ten sessions. Neither leg has a candidate. Run where one provider supplies BOTH numerator and baseline (\$9.19, \$9.24): Kpler's 10-day mean of **10** vessels a day at 9 September, against its own pre-war base above **130**, is **under 8%** — and Kpler itself calls it the lowest since May. (ii) JMIC 095 is the substance of this edition on this channel. The incident count moves **101** → **109** since 1 March, so the count Update 094 froze at 101 is unfrozen — a freeze reported in each of the two editions that followed 094, across three of which 095 could not be retrieved. (!) **Its internal arithmetic does not reconcile** — '7 incidents since the last report' added to 094's 101 gives 108 — and the discipline here is to publish both figures verbatim, adjust neither, and let the next product settle it. (iii) **The mine language moved and the direction is not reassuring.** 094 asked mariners to watch for 'mining activity in the area'. 095 asks them to watch for '**attempted mining activity within and adjacent to the TSS**'. That is narrower in geography and different in tense; it is not a statement that the mines are gone, and it is the fourth allied product since the presidential mine-free claim of 25 August that declines to say so. (iv) (!) The channel acquired a SECOND theatre this window and the score cannot show it, which is the scale-cap problem in its purest form: Bab el-Mandeb and the Gulf of Aden are carried at SUBSTANTIAL in the same product that carries Hormuz at SEVERE, and on 10 September Houthis forces took the Red Sea port that overlooks the first of them. (!) That SUBSTANTIAL rating PREDATES the seizure and is NOT evidence about it; the two facts sit side by side and are not combined.

OIL PRICE SHOCK — 2/5 to 3/5. FIRES. The second confirmed close printed **\$7.72** through the trigger, the discipline that delayed it by one edition cost nothing, and the move came from the OTHER chokepoint.

(i) **The rule is satisfied on its own terms.** The scored continuation closed **\$97.10** on 9 September and **\$102.72** on 10 September, **+\$5.62**: two consecutive confirmed closes above **\$95**, which is what 'sustained' has meant in this document since 3 July. The second close cleared by **\$7.72** and the session low of **\$96.14** never came back to the level. **Nothing was moved to make this fire** — not the level, not the word, not the series (\$9.26). (ii) **\$9.56 is RESOLVED, and the resolution is the strongest possible one.** The problem was that a trigger sitting INSIDE the continuation-to-active basis had two defensible readings giving OPPOSITE answers. On 9 September the level sat below both series but the readings still disagreed on the SCORE, one close against six. On 10 September the active closed **\$107.63**, a seventh straight close through the level, and the continuation took its second: **both readings now fire**. The undefined region is gone in both senses, and it closed without the rule ever being rewritten under pressure. (iii) **The one-edition delay is the vindication**, not the cost. On 10 September this document had ONE confirmed close and a mark of **\$97.00** whose low so far was already through the trigger. Two shortcuts were available and BOTH were refused: counting the mark as the second close, and shortening sustained to a single close. Either would have fired the channel a session early on reasoning that happened to be right — which is exactly how 25 June produced a downgrade reversed the next day. (!) And the mark understated twice over: the close came in **\$5.72** above it, and the settled session low of **\$96.14** was 82 cents below the low the morning had shown. (iv) **Why the barrel moved ON 10 SEPTEMBER, and it was NOT Hormuz.** (!) This attributes the SECOND close only; the 9 September close is not attributed here, and carried the previous window's events. Two dated items land inside the 10 September session, and neither is a Strait event. Houthis forces **seized Mokha**, on Yemen's Red Sea coast, putting **Bab el-Mandeb** at risk — which a bank's framing relayed this week calls the remaining seaborne exit Saudi crude has used AROUND a denied Hormuz. And Saudi Arabia reported to OPEC that August output was **6.238 mb/d, the lowest since 1990**, down about **1.9 mb/d** on the month. (!) The producer's own submission, but it reaches this desk through a TIER 2 relay; the submission itself is not published. (!) The price is therefore pricing a SECOND chokepoint against a producer already at a 36-year low, and this document's own maritime channel — scoped to Hormuz — cannot register either. (v) **The reconciliation is the most one-directional of the war.** FIFTEEN marks were published for 10 September; **FOURTEEN settled ABOVE them** and only the 2s10s below. Brent missed by **+\$5.72**, after **+\$1.06** and **+\$1.49** — a THIRD consecutive upside miss, and by far the largest. The Singapore cut is systematically understating a rising tape and that is now a documented pattern, not an anecdote (\$9.31). (vi) (!) **WHAT THIS EDITION DOES NOT DO IS SET THE NEW LEVELS.** The 3→4 upgrade is NOT on this document's current record — the channel has sat at 2 since 3 July and the trigger table has only ever restated the live level — and no 3→2 downgrade is set here either, because §4(b) requires a downgrade threshold WIDER than the upgrade that just fired, so it cannot be the mirror of **\$95**. Setting either level on the day a trigger fires is precisely what \$9.26 forbids. Both are OPEN, flagged, and are the first thing the next edition must publish — before the price is near them.

US INFLATION IMPULSE — 5/5, held. A seventh close above the firing level at the widest margin of the run, and the producer data finally shows the barrel arriving.

(i) The forward closed **2.3295%**, a **SEVENTH** consecutive close above the **2.30%** level whose sustained break fired this channel 4→5 on 31 July, clearing by **2.95 bp** — the widest of the run, nearly double the previous widest, and the highest close since 20 August. (!) The margins still oscillate rather than trend, and are recorded as such. (ii) The documented downgrade is a sustained close at or below the **2.142%** anchor, **18.75 bp** lower, from 17.46: further away again. (!) \$9.16 and \$9.26 govern the gap between firing level and downgrade level; the answer is unchanged and the tension is reported rather than closed. (iii) **The transmission is no longer an inference.** August producer prices, published 08:30 ET on 10 September, rose **0.4%** on the month and **5.4%** on the year — the highest annual rate of 2026 — with final-demand energy **+4.2%** accounting for more than three-quarters of the goods increase and **diesel alone +24.1%**. That is the oil channel appearing in the price statistics, one month before it can appear in the retail series this document scores for political stress. (iv) Ten-year spot compensation closed **2.4165%**, **+2.86 bp**, its highest since 21 May and **15.96 bp** above its **2.2569%** anchor. It carried **2.86** of the ten-year's **12.20 bp: compensation, not real yield**, but under a quarter of the move, so the ten-year sold off mostly on real rates. (v) (!) **August CPI is PROSPECTIVE at this cut**, at 08:30 ET today, and is the last inflation reading before the FOMC. Consensus is **+0.4%** headline and **3.4%** on the year, with core **2.4%** on the year. (!) The core MONTHLY consensus is quoted at **+0.4%** by one dated source and **+0.2%** by another; **the two are NOT averaged** and both are named.

TREASURY STRESS — 5/5, held. Every tenor made a war high, the two-year by the largest one-day move of the war, and the auction says the long end is not the problem.

(i) Both downgrade legs failed and both widened sharply. The yield leg needs a 30-year close below **5.00%**; it closed **5.3652%**, failing by **36.52 bp**, from 28.89. The volatility leg needs MOVE below **75**; MOVE closed **82.09**, failing by **7.09**, from 1.74 — the miss quadrupled in one session on a THIRD consecutive close on the wrong side. (ii) (!) THE LAST EDITION'S STRUCTURAL READING IS **SUPERSEDED AFTER ONE SESSION AND IS NAMED HERE RATHER THAN DROPPED**. It said the war high had migrated DOWN the curve, because the 2-, 5- and 10-year made new highs while the 20- and 30-year would not. On the 10 September close **all five made new highs**, the 20-year at **5.3915%** and the 30-year at **5.3652%**, taking out the **17 August** peaks after sixteen trading sessions — seventeen rows, one of them the shut Labor Day market (\$9.58). The reading was correct on the data it had and survived one session. (iii) The SHAPE, however, says the same thing the migration reading was trying to say. The moves fall monotonically with tenor — **+15.61, +14.55, +12.20, +10.07**, +7.63 bp — a clean bear flattener, 2s10s **-3.195**. The two-year's **15.61 bp** is **the largest one-day rise at that tenor in this entire war**, past the 13.27 of 17 June. A front-led selloff prices a CENTRAL BANK. (iv) **And the auction points away from the alternative**. The **\$22bn** 30-year reopening stopped at **5.308%** against a **5.335%** when-issued — a **2.7 bp stop THROUGH**, not a tail — on a bid-to-cover of **2.612** against a recent 2.38 average, indirects **79.5%** and **primary dealers 2.21%**, **the lowest on record**, against 11.51% at the 13 August new issue. (!) **The when-issued level is a dealer-desk figure**, TIER 2, not Treasury primary data, so the stop-through is reported at that tier and \$9.39 is not relaxed. It is the highest 30-year stop since August 2001 and the fifth consecutive above 5%; it is a REOPENING and is not comparable with the **\$25bn** new issue that cleared 5.216%. A long end absorbed at a record-low dealer take is not a buyer strike. (v) (!) **WITHDRAWN: the hike-odds comparison published last edition**. This document wrote that the market was priced near **56%** for a hike, 'down from about **66%** on 31 August'. **The two figures are from different venues**: the 66% is CME FedWatch, the 56% a prediction-market price, and differencing across them is what \$9.19 forbids. **The comparison is withdrawn; the DIRECTION it implied is not asserted to have been wrong**. On one venue CME reads **44%** a month before 9 September, **66%** on 31 August, **62%** on 9 September, and higher again after the PPI — up over the month, modestly down across the fortnight the withdrawn sentence spanned. From here the venues are published separately and never differenced: **CME 62% (9 Sep)**, prediction market **54% (11 Sep)**.

POLITICAL STRESS — 5/5, held. The scored series matched a four-month high, and the record it cannot see was set twice more.

(i) AUTMUSAG resolved at **\$5.05** for 9 September, **+5 cents**. (!) It is the highest since **27 May**, when it last printed exactly **\$5.05** — so it MATCHES that level rather than exceeding it, and the distinction is made because this document has mislabelled a match as a record before. It sits **13 cents** below the **\$5.18** peak of 20 May, **+43.5%** on the **\$3.52** anchor, **30 cents** above the **\$4.75** level that fired this channel 4→5 on 4 August, and **45 cents** above the **\$4.60** downgrade condition, which needs THREE consecutive closes at or below it. The 10 and 11 September cells are blank. (ii) **\$9.57's spread is UNTESTED this edition**, not stable. The DOE series is WEEKLY and next prints on 14 September, so the record **77.3-cent** spread of 7 September and its ninth consecutive widening are neither extended nor reversed. The description of the scored series remains WITHDRAWN and unreplaced. (iii) The same-date gap to AAA regular NARROWED for the first time in this run, to **82.6 cents** — AUTMUSAG **\$5.05** against AAA regular **\$4.2245** for 9 September — from 84.9 cents on the 8th. One session is not a turn. (iv) (!) **The distillate record ran again, twice**. AAA diesel set an all-time high of **\$5.9424** on 9 September and another at **\$5.9773** on 10 September, **+3.49 cents**, and sits **2.27 cents** below \$6.00. **On the same day GasBuddy's separate national average crossed \$6.00 for the first time on record**. (!) The two series are different panels and are NOT spliced; a six-dollar headline is true of one national series and not yet of the other, and both statements are published. \$9.61 stands: AUTMUSAG is a GASOLINE series measuring gasoline correctly, and whether a distillate belongs in this channel is a SCOPE question left open rather than settled here — but the producer data above now puts **+24.1%** of monthly diesel inflation directly into the channel this document scores on gasoline.

ESCALATION RISK — 5/5, held. A second chokepoint changed hands, the Saudi reply this document could not source has been sourced, and the file acquired its first hard dates.

(i) **The war acquired a SECOND theatre of maritime denial**. Houthi forces took the Red Sea port of **Mokha** on 10 September, government forces withdrawing south — Reuters citing three Yemeni government sources, with a correspondent on the ground. Bab el-Mandeb is about **29 km** at its narrowest, and the defence analyst quoted says the strait could be controlled 'just with artillery', without missiles or drones. Yemen's presidential council head said it 'cannot become another Strait of Hormuz'. (!) Against that, the Houthi spokesman says navigation and trade 'remain safe and uninterrupted' — **while the ban on Saudi ships stands**, and both halves are recorded. (ii) (!) **THE SAUDI REPLY IS NOW SOURCED**, which discharges an open item published last edition as promised-and-NOT-SOURCED. Saudi forces struck Taiz, Hodeidah, al-Jawf and Marib on **10 September: 40** strikes on one count, **54** on the Houthis' own. **TWO counts, named to their sources and never merged**. (iii) The 8 September barrage that prompted it is now on the UN record in Saudi Arabia's own words — its ambassador condemned 'the September 8 strikes that wounded 73 civilians' on 10 September — which independently confirms the date correction this document published yesterday. (iv) **The kinetic window extends to 2 through 10 September**, NINE days with no acknowledged US strike on Iranian SOIL; 11 September is unreported at the cut and is NOT counted. (!) **One counter-indication is named rather than buried**: Iranian state media reported projectiles striking areas of **Sirik**, timestamped late 9 / early 10 September, with damage and casualties explicitly not available. It is TIER 3, unacknowledged by CENTCOM, and does not meet the bar of 'acknowledged' — but it is the second such claim at Sirik after 1 September and the window is published with it on the record. (v) **Mediation was replaced by a calendar**. A FIFTH consecutive edition with no Omani text on the strait (\$9.23). What exists instead is dated: the IAEA Board referred Iran to the Security Council on 9 September by **23 to 3 with 8 abstentions**, the three being Russia, China and Niger; the Council met on 10 September with its Iran sanctions committee blocked a **fourth consecutive quarter**; and the expert panel's mandate comes to a vote on **17 September and expires 27 September**. That is the first hard deadline on this file all war. (vi) (!) **One damage claim is deliberately NOT adopted**. A single source reports an A-10 wing and about eight F-15E aircraft damaged at Muwaffaq Salti by the Al-Azraq salvo. It contradicts Jordan's own TIER 1 statement that the two leakers fell in unpopulated areas. **Both are on the record and neither is adopted here**.

2.2 · Stage-4 thresholds

	Test	State on the 10 September close
A	A Treasury auction clearing with a tail above its when-issued level	NOT ARMED — and for the first time NOT ARMED ON EVIDENCE rather than on untestability. The \$22bn 30-year reopening of 10 September stopped at 5.308% against a 5.335% when-issued: a 2.7 bp stop THROUGH , the opposite of a tail. (!) The when-issued level is a dealer-desk figure , TIER 2, because Treasury still publishes none, so \$9.39 is NOT relaxed and no primary tail is asserted; the point is that even the TIER 2 figure arms nothing. (!) The composition is the finding. Bid-to-cover 2.612 against a 2.38 recent average and the highest since February; indirects 79.5% , reported as the second-highest on record; directs 18.3% ; primary dealers 2.21%, the lowest on record by a wide margin , against 11.51% on 13 August. Across a month the dealer take has HALVED at the ten-year, 8.6% to 4.31%, and fallen by more than four-fifths at the thirty. At 5.308% this is the highest 30-year stop since August 2001 and the fifth consecutive above 5%. (!) It is a REOPENING and is NOT comparable with the \$25bn new issue of 13 August that cleared 5.216%
B	30-year above 5.20% WITH 10-year above 4.65%	ARMED, and the run EXTENDS to a NINTH close on one arming — 28 and 31 August, then 1, 2, 3, 4, 8, 9 and 10 September, 7 September excluded because a shut market wrote no close (\$9.58). Both legs cleared by their widest margins of this arming by a distance: the 30-year by 16.52 bp , from 8.89, and the ten-year by 31.26 bp , from 19.06. The long-leg sequence reads 0.56, 4.23, 7.30, 5.71, 4.65, 4.23, 4.54, 8.89, 16.52 . (!) The standing reading that 4.65% and 5.20% are the middle of the distribution rather than its edge is now SUPERSEDED , having been contradicted on two consecutive closes with the margin roughly doubling on each. The sequence is still not monotone and is recorded as such
C	MOVE above 130	NOT ARMED. 82.09, some 47.91 points below , and the war high of 115.02 was set on 26 March. (!) The direction is what carries: MOVE has risen 5.35 points in a session, closed above its 73.38 pre-war anchor for a THIRD session, and is at its highest since 31 July, while the 30-year sits 75.46 bp above its own anchor. The divergence this document flagged through August — a normalised expectation of movement around a yield that had not normalised — is now closing fast from the volatility side, which is the less reassuring of the two ways it could close

2.3 · Cross-asset macro record — compressed

The full record, with every source dated and tiered, is at **ANNEX A2.3**. (!) **\$9.28'S IMPORT TEST IS RESOLVED AFTER TWO UNRESOLVED CYCLES**, AND IT RESOLVES TO NO REVERSION. The delayed Weekly Petroleum Status Report published at 12:00 ET on 10 September for the week ended 4 September: crude imports **6.8 mb/d**, up **53,000 b/d**, four-week average **2.3% ABOVE** a year earlier. The test asked whether imports would hold near **7.3** or revert toward **6.3**; they did neither, holding at 6.8 and edging higher, so the routing shift is two cycles old and not a one-week artefact. Crude stocks **424.1 mn bbl**, -0.4, at the five-year average; refinery runs **97.8%**; distillate stocks +2.1 mn bbl but about **13%** below their five-year average — the inventory counterpart of the diesel record. (!) **No SPR level is published here:** this week's figure could not be sourced, and **286.6 mn bbl** for the week ended 28 August is NOT carried forward (\$9.19). **The OPEC MOMR was retrieved**, after last edition could not retrieve it at all: 2026 demand growth cut to **+380,000 b/d**, a **FIFTH** consecutive monthly downgrade — a demand forecast falling into a supply shock. The September IEA report was due at 10:00 Paris on 11 September and is **PROSPECTIVE**. Initial claims were **206,000** for the week ended 5 September on a four-week average of **206,000** — the one release this week that did not push the curve. **Gas remains the clearest attribution:** TTF **€82.047** and Asia LNG **¥4,198** set records while Henry Hub closed **7.48% BELOW** pre-war — a routing and loading shock, not a global one. On freight, the Baltic TD3C was last assessed at **WS677.22** with a round-trip TCE near **\$704,000/day** for **3 September**; (!) **the current week is NOT FOUND and the figure is published with its date, not as a current level**. War-risk cover for a Gulf transit is quoted at **7.5–12.5% of hull value** against about **0.25%** pre-conflict, dated 8 September — (!) a percentage-of-hull basis NOT combined with the per-voyage dollar figures also in circulation. On the calendar: **August CPI at 08:30 ET on 11 September** and the FOMC on **15–16 September**, CME FedWatch at **62%** for a hike as of 9 September.

3 · SHOCK SCORE

28 / 30 — CRISIS band (22–30). THE SCORE MOVES. Oil fires 2→3 on its second confirmed close above \$95, ending a hold at 27 that ran **twenty-three EDITIONS** — not days — from 4 August. Market channels are scored on the 10 September close except political stress, on the 9 September AUTMUSAG print; event channels carry their own dates below. (!) **The 3→4 and 3→2 levels are NOT set here** — see \$2.1 and A10.2.

Channel	Score	Basis, with its as-of date	Distance to a change
1 · Maritime denial	5	At the cap. No verified reopening; Kpler 10 vessels/day on its own 10-day mean, 9 Sep, under 8% of its own base. (!) JMIC 095 unfroze the count, 101 to 109	Downgrade needs a verified reopening AND ten sessions above 25%. Neither leg has a candidate
2 · Oil price shock	3	(!) FIRE 2→3 . TWO confirmed closes above \$95: CO2 \$97.10 then \$102.72, the second \$7.72 through. COA \$107.63, a seventh. Both bases agree: \$9.56 RESOLVED	(!) NO 3→4 level is on this document's record and none is invented here ; no 3→2 is set either, because \$4(b) needs one wider than \$95. Both OPEN (\$9.26)
3 · US inflation impulse	5	At the cap. 5y5y 2.3295%, a seventh highest above 2.30%, clearing by 2.95 bp, the widest of the run. BE10 highest since 21 May	Downgrade needs a sustained close at or below 2.142%, now 18.75 bp lower and further away
4 · Treasury stress	5	At the cap. War-high closes at ALL FIVE tenors; the 2-year rose 15.61 bp, the largest of the war. The 30-year reopening stopped THROUGH on a 2.21% dealer take	Both legs failed and both widened: 30-year by 36.52 bp, MOVE by 7.09 on a third close above 75
5 · Political stress	5	At the cap. AUTMUSAG \$5.05 (9 Sep), matching its 27 May level, +43.5% on the anchor. AAA diesel set records on the 9th and 10th. (!) The DESCRIPTION stays WITHDRAWN (\$9.57)	Downgrade needs THREE closes at or below \$4.60, now 45 cents below the last print
6 · Escalation risk	5	At the cap. A SECOND chokepoint changed hands — Mokha, 10 Sep — and the Saudi reply landed the same day. Mediator silent a fifth edition. As of 10 Sep	Downgrade needs a mediated stand-down with talks resumed. The only forward dates are UN sanctions deadlines

Read the composition, not the total (\$9.7, \$9.27). (!) **The move vindicates the standing warning rather than contradicting it.** This document has said since 10 July that further geopolitical deterioration CANNOT raise the score, because maritime and escalation are

capped, and that only a MARKET channel could move the number. That is exactly what happened: the war widened to a second chokepoint and the score registered it only through the barrel. Five of six channels still sit at the ceiling, so the total still cannot show Mokha, a seventeenth gas record, five war-high yields, or a 30-year absorbed at a record-low dealer take. **Both remaining points sit in the same channel**, and that channel now has no published next level.

4 · WHAT HAS CHANGED SINCE THE 10 SEPTEMBER EDITION

#	Change	Significance
1	THE OIL CHANNEL FIRED 2→3 and the score is 28/30. CO2 closed \$102.72, a second confirmed close, \$7.72 through \$95; the session low \$96.14 held above it	The first channel move since 4 August, on the \$95 level restated 14 August, the series the rule was always written on, and the two-close reading applied since 3 July
2	\$9.56 is RESOLVED, not narrowed. COA closed \$107.63, a seventh straight close through the level, so both bases give the SAME scoring answer	The largest open methodological problem here closes without the rule being rewritten under a live trigger (\$9.26)
3	(!) The barrel moved on the OTHER chokepoint. Houthis forces took Mokha on 10 Sep, putting Bab el-Mandeb at risk; Saudi Arabia told OPEC its August output was 6.238 mb/d, lowest since 1990	The maritime channel is scoped to Hormuz and registers neither. A second denial theatre is priced in the barrel and invisible in the score
4	(!) SUPERSEDED after one session: the war high has NOT migrated down the curve. All five tenors made war highs; the 20- and 30-year took out 17 August	Named, not dropped. The SHAPE still says policy: moves fall monotonically with tenor and the 2-year rose 15.61 bp, the largest of the war
5	The \$22bn 30-year reopening stopped THROUGH by 2.7 bp at 5.308%, primary dealers 2.21%, the lowest on record, against 11.51% on 13 August	The long end is not the problem. A front-led selloff against a long end absorbed at a record-low dealer take prices a central bank, not a buyer strike
6	(!) WITHDRAWN: the hike-odds comparison. Last edition's 'near 56%, down from 66%' differenced a prediction-market price against CME FedWatch. CME alone reads 44% a month before, 66% on 31 Aug, 62% on 9 Sep	\$9.19. (!) The defect is the SPLICE and the unstated venue, NOT an inverted sign — and saying otherwise would be a second error. The venues are published separately from here
7	JMIC 095 OBTAINED after three editions of failure and it CORROBORATES CENTCOM's five tankers, attributing them to US forces. The count unfroze, 101 to 109	(!) Its own arithmetic does not close — 101 plus 7 is 108 — and both are published verbatim. CENTCOM says destroyed, JMJC disabled; one sank
8	Three FURTHER open items DISCHARGED, on top of items 2 and 7: \$9.28's import test resolves to NO REVERSION at 6.8 mb/d; the Saudi reply is SOURCED, 40 strikes on one count and 54 on another; the IAEA vote is FOUND, 23–3 with 8 abstentions	Two cycles and two editions of NOT FOUND closed at once. The UN file now carries hard dates: 17 Sep, expiry 27 Sep

5 · SCENARIO MAP

Scenario	Prob.	Content	Shift and why
Full war — sustained multi-front exchange	42	A SECOND maritime chokepoint changed hands: Mokha fell on 10 September and Bab el-Mandeb is now within artillery range of the shore, and the Saudi reply landed the same day	+2. The theatre widened by geography rather than intensity, and to a strait this document does not score
Deal collapse — corridor talks fail outright	35	A fifth edition with no Omani text on the strait. What replaced mediation is a sanctions calendar: a mandate vote on 17 September, expiry on 27 September	Unchanged. (!) This document does not move a probability on silence alone (\$9.23). The UN dates are recorded and are not yet outcomes
Regional relapse — Gulf infrastructure degraded	18	(!) Saudi crude output at 6.238 mb/d in August, the lowest since 1990, down about 1.9 mb/d, on Riyadh's own submission to OPEC, relayed at TIER 2. Realised, not asserted	+1 only. (!) This is a LEVEL, not the SUSTAINED widening the line was rewritten to require, so it buys one point and not more
Contained but violent — the present state persists	4	Nine days with no acknowledged US strike on Iranian soil, and a strait neither closed to everything nor open to anything	–2. (!) The largest move on this map, and on two counts: a second chokepoint changed hands, and the market channel that measured violent-but-contained fired
Mediated pause — verified stand-down and talks	1	No convened talks, no counterparty text for a fifth edition, and a Council file whose only forward dates are sanctions deadlines	–1, and NOT on silence (\$9.23). Reduced to its floor on the DATED fact that the only forward items on this file are a 17 Sep vote and a 27 Sep expiry

Sums to 100. (!) **FOUR lines moved:** full war +2, regional relapse +1, contained –2, mediated pause –1. The reductions are paid into the two lines that name what actually happened this window: a second chokepoint changing hands, and a producer reporting a 36-year output low. (!) The deal-collapse line is again held DELIBERATELY flat despite a fifth edition of Omani silence, because this document does not move a probability on silence alone (\$9.23). (!) The contained line is at 4, its lowest of the war, and the reason is on this document's own record: the channel that defined containment fired.

6 · WATCHLIST · NEXT 24–72 HOURS

#	Watch item	Why it matters
1	August CPI at 08:30 ET on 11 September, then the FOMC on 15–16 September	The last inflation print before the decision. Consensus +0.4% and 3.4% y/y; (!) the core MONTHLY consensus is quoted at both +0.4% and +0.2% and is NOT averaged

#	Watch item	Why it matters
2	Whether Bab el-Mandeb produces an ATTACK, not just a threat, after Mokha fell	A strike there turns a second denial theatre from prospective into actual — and the maritime channel, scoped to Hormuz, would still not register it
3	(!) This document's own next task: publishing the oil channel's 3→4 and 3→2 levels	Neither is on the record and neither is invented. \$9.26 requires them stated BEFORE the price is near them: the next edition, not a later one
4	JMIC 096. On the only cadence on the record — 094 at 051500Z, 095 at 101500Z, five days apart — it is due around 15 September	Whether the arithmetic reconciles — 101 plus 7 is 108, not the 109 published — and whether the 'attempted mining' language holds
5	The UN sanctions calendar: a mandate vote on 17 September, expiry on 27 September	The first hard deadlines on this file all war. A lapse removes the monitoring apparatus during a shooting war
6	Whether AAA diesel crosses \$6.00, 2.27 cents away, and whether the DOE print on 14 September widens the \$9.57 spread a tenth time	GasBuddy's series crossed on 10 September. (!) A six-dollar headline is true of one national panel, not the other, and the two are never spliced

\$7 source log, \$8 update protocol and \$9 methodology are NOT printed here. They are carried IN FULL in the ANNEX as A7, A8 and A9, with A1 (the full tape commentary, integrity record, reconciliation and five retail series), A2.3 (the full macro record) and A10 (anchors and trigger levels). Nothing is cut: material is relocated and cited by section.
