

ANNEX · 27 AUGUST 2026

This annex is the companion to the 27 August 2026 edition and is built every day. The edition is capped at eight pages; material is RELOCATED here, never deleted. Section numbering tracks the edition: A1 carries the full commentary for the live-tape tables and the gasoline chart, plus the full strait-operational record; A2.3 the full cross-asset and macro record; A7 the source log; A8 the on-demand update protocol; A9 the methodology; A10 the anchor and trigger levels. A figure marked NOT OBTAINED is absent from the record, not unchanged. A figure marked PROSPECTIVE relates to a US session that had not begun at the Singapore cut and is not a retrieval failure (\$9.46).

A1 · LIVE TAPE — FULL COMMENTARY

A1.1 · Data integrity — all three standing checks CLEAR

Row-level check (\$9.8): CLEARS decisively. The 26 August row refreshed on every field that had a 26 August snapshot, and it additionally carries MOVE at 69.44 and VIX at 15.21, both of which were blank on the 26 August intraday. No field on the 26 August row is identical to the 25 August close. The row is a genuine settled close, not a stale snapshot.

Field-level identical-to-4dp check (\$9.35): NO FIRINGS on either row. Every field present on the 26 August close differs from its 25 August value, and every field present on the 27 August intraday differs from its 26 August close. **Six series simply have no 27 August print — AsiaLNG, MOVE, VIX, SOFR, GasAAA and GasDOE — and are reported BLANK rather than carried (\$9.9).** SOFR has now been dark for two sessions (26 and 27 August) and the two gasoline series likewise. **A stale low is not reassurance and a dark session is not a flat one; nothing is inferred from any of the six.**

Basis check (\$9.41): CLEARS on both contracts. The Brent CO2/COA basis compresses smoothly — 1.63 (24 Aug), 1.31 (25 Aug), 0.90 (26 Aug), 0.81 (27 Aug intraday) — with no sign change and no step, so there is no Brent roll in this window. The WTI CL2/CLA basis is stable at 1.71, 1.48, 1.38 and 1.43 across the same days; the roll of 21 August is behind us and the two bases move together, so **WTI day-on-day is comparable from 21 August forward but NOT across 20–21 August.**

Restatement check: NO RESTATEMENT. Every figure this monitor published for the 25 August close — Brent 87.27, COA 88.58, WTI 80.88, CLA 82.36, Henry Hub 2.770, TTF 66.588, JGLA 3,793, DXY 98.915, 2Y 4.1741, 5Y 4.3353, 10Y 4.6288, 30Y 5.1651, 2s10s 45.257, BE10 2.3135, 5y5y 2.2991, MOVE 71.92, VIX 15.45 — reads identically in the refreshed extract, as do all fourteen 24 August figures published in tables 1.1 and 1.2, together with the 24 August AUTMUSAG and USRFRUSA values. **The 21 August 30-year, published UNRESOLVED under \$9.35 and settled at 5.2709 in the last edition, still reads 5.2709.** No backfill occurred: AUTMUSAG and USRFRUSA have not filled 26 or 27 August, and the 24 August AUTMUSAG value reported UNRESOLVED last edition still reads \$4.82 against 25 August's \$4.83.

A1.2 · Reconciliation of the 26 August snapshot — the long end was the miss, and the ten-year's move was all compensation

\$9.1 requires the Singapore-AM snapshot to be reconciled against the settled close every edition, and \$9.20 requires the narrative conclusions built on it to be withdrawn BY NAME where they fail. The 26 August close ran **ABOVE** the snapshot across energy and the front of the curve and **BELOW** it at the long end — the snapshot missed the US session in BOTH directions at once (\$9.12).

Field	26 Aug snapshot	26 Aug close	Gap
Brent CO2 / COA	85.31 / 86.33	86.94 / 87.84	+\$1.63 / +\$1.51
WTI CL2 / CLA	79.14 / 80.51	80.85 / 82.23	+\$1.71 / +\$1.72
Henry Hub / TTF	2.811 / 63.690	2.842 / 65.626	+\$0.031 / +€1.936
DXY	98.936	99.165	+0.229
2-year / 5-year	4.1888 / 4.3441	4.2093 / 4.3619	+2.05 / +1.78 bp
10-year / 30-year	4.6367 / 5.1734	4.6465 / 5.1671	+0.98 bp / -0.63 bp
2s10s / BE10 / 5y5y	44.585 / 2.3161 / 2.3051	43.308 / 2.3260 / 2.3032	-1.277 / +0.99 / -0.19 bp

Read the signs together, and decompose them rather than labelling them. Nominal yields out to ten years settled ABOVE the snapshot and the 30-year settled BELOW it, so the miss was at the long end. **But at the ten-year point the entire move was inflation compensation, not real yield: the nominal settled +0.98 bp above the snapshot against a breakeven +0.99 bp, leaving the ten-year real yield unchanged to a hundredth of a basis point. The real-rate repricing is confined to the front end, where the 2-year settled +2.05 bp against a 5y5y forward that settled 0.19 bp LOWER. Do NOT call this a real-yield session: it is a front-end real-rate move wrapped in a ten-year compensation move, and the two are separable in the table above. NO narrative conclusion from the 26 August edition requires withdrawal.** Its Brent figures were explicitly labelled as an intraday and its scoring ran off the 25 August close, which is unrestated. **Two claims are NARROWED rather than withdrawn, and the two narrowings are not the same kind: (a) the 26 August edition wrote that a Threshold B re-arm on the 26 August close 'would be the FOURTH one-session round trip' — it did not re-arm, so no round trip occurred and the count of one-session re-arms remains THREE (10, 14 and 20 August); (b) it wrote that the two Treasury downgrade legs had CONVERGED and that \$9.15 no longer fitted — that was true of 25 August and is false of 26 August, on which the legs rotated apart again. (a) was a CONDITIONAL that never triggered and simply lapses; (b) was CORRECT about its own session and wrong as a trend. Neither is left standing.**

A1.3 · Energy, gas and the physical record — full commentary

Oil. Brent CO2 closed **\$86.94 on 26 August, a third consecutive down-close** from \$92.67 on 21 August, and printed \$86.42 intraday on 27 August; the active COA closed \$87.84. Week on week against the 19 August close, CO2 is **-\$2.85** and COA **-\$3.78**. Against the pre-war anchor of \$72.48 the scored series is **+\$14.46**. **Aggregator and wire copy carried the 26 August move as Brent -2.6% to about \$86.2–86.3 and WTI to about \$80.3–80.8; the Bloomberg extract this monitor scores on has CO2 at \$86.94 and CLA at \$82.23. The bases differ and are NOT reconciled — all scoring runs off the extract, never off the web. Named analyst attribution, dated: Amrita Sen (Energy Aspects) to CNBC, 'this whole thing is a mess'; Carly Garner (DeCarley Trading), that a US claim of 8–9 mb/d still leaving the Gulf is 'probably too optimistic' and that 'markets get tired of war headlines'. NO named, dated attribution for the 27 August move exists,**

because the US session had not occurred.

Gas — the structural divergence, and the first session it moved together. TTF closed **€65.626 (26 Aug)**, **+110.2% versus its €31.227 pre-war anchor**, two closes below the €68.320 war record of 24 August; Asia LNG closed **¥3,623, –170**, ending a three-session run of record closes that peaked at ¥3,793, and stands **+117.1% versus pre-war**. **Henry Hub closed \$2.842, 7.22% BELOW its \$3.063 pre-war anchor**. That triangle is the identifying signature of the whole episode: the largest producer's domestic benchmark is below where the war started while the two import benchmarks sit at or beside records. This is a routing dislocation, not a global energy shock. **NO named, dated attribution for the 25–26 August reversal in either gas benchmark could be sourced**. Standing structural drivers are unchanged: **EU storage 62.99% full at the end of the gas day on 24 August against a five-year average of 79%** (Gas Infrastructure Europe), Germany 51% and the Netherlands 44.3%; Norwegian supply constrained by the Ormen Lange compressor failure, roughly 8.9 mcm/d off a 22.9 mcm/d field capacity since 13 July and now extended to 1 February 2027; and **Qatari LNG exports down about 96% since the 4 March QatarEnergy force majeure**, with Asian buyers who normally take over 80% of Qatari gas competing for spot cargoes. **Named, dated:** Natasha Fielding (Argus Media), 26 August — European stores are 'unusually low for the time of year' and the only comparable year in fifteen is 2021; Samantha Dart and Laura Cyr (Goldman Sachs), cited 26 August — current prices 'will not be enough for Europe to manage storage through winter', with December 2026 TTF needing to move above €100/MWh on a slow-normalisation path against a €50 base case. **NO Gassco or Norwegian operator outage notice dated 26–27 August. NOT FOUND.**

The EIA weekly for the week ending 21 August, released 26 August. Commercial crude 428.9 mn bbl, +0.1 mn on the week and now about 1% ABOVE the five-year average; crude imports 6.2 mb/d, down 435 kb/d, on a four-week average of 6.6 mb/d — which supersedes the 6.5 carried previously, itself a supersession of ~6.3. The routing test of \$9.28 therefore resolves to elevated-and-holding rather than reversion: imports are running 2.6% above the same four weeks a year earlier while the world draws. Refinery utilisation 97.4% on crude inputs of 17.4 mb/d. Distillate stocks built 2.2 mn bbl and are still about 14% BELOW the five-year average, widened from about 13%. Gasoline stocks fell 2.5 mn bbl and the EIA describes them as about 14% BELOW the five-year average, against about 5% below a fortnight ago. (!) THAT SHIFT DOES NOT RECONCILE WITH THE WEEKLY DRAWS: nine percentage points against a late-August five-year average near 220 mn bbl implies a relative swing of roughly 20 mn bbl in a fortnight, and the reported weekly changes do not come close. The EIA's own wording is carried on both vintages, the two are NOT reconciled here, and no delta is computed across them. Products supplied on a four-week basis: total 20.5 mb/d, –3.0% year on year; motor gasoline 8.9 mb/d, –1.1%; distillate 3.8 mb/d, +2.2%; jet fuel –2.3%. THE SPR DREW AGAIN: 289.7 mn bbl, down 3.7 mn from 293.4 — the first level below 290 mn bbl this monitor has recorded, extending a level the EIA has already described as the lowest since December 1982. (!) SOURCE FLAG: the SPR figure comes from the DOE's own SPR office at spr.doe.gov, NOT from an EIA WPSR line, and the whole weekly table is sourced to a verbatim trade reproduction rather than a first-party EIA fetch — see \$9.45 in A9.

A1.4 · Strait operational — the full record, every provider, every denominator

Strand	Detail	Source and tier
UKMTO / JMIC advisories	NO Update 090. NO Update 091. NO VRA Overview No. 4. NO Warning 121-26. All four probed by DIRECT FILE URL under multiple date and suffix variants and all returned empty; the product index pages render empty to a fetcher as usual, so these are retrieval results against the working method, not assumptions . Update 089 (ICOD 251500Z) therefore stands as the live instrument: cumulative count 96 since 1 March, two since the prior report; Regional Threat Level SEVERE; Strait of Hormuz SEVERE — 'deliberate hostile action considered as highly likely' ; Gulf of Oman MODERATE (the reclassification, not a de-escalation); Arabian Gulf MODERATE; Gulf of Aden and Bab el-Mandeb SUBSTANTIAL. Verbatim on mines: 'There remained a continued risk of drifting or uncharted mines in and near the TSS, with mine danger areas still active' , with clearance and survey operations continuing and coordinates held by NAVCENT NCAGS. Six merchant vessels remain held. (!) EPOCH NOTE: UKMTO counts from 1 March, Windward from 28 February and this document's market anchor is the 27 February close — three start dates, each on its own provider's basis, never to be differenced	UKMTO Update 089, read in full by direct file URL 27 Aug — Tier 1 primary
Transit counts — THREE universes for 25 Aug, never spliced (\$9.24)	Kpler via Reuters: 5 commodity vessels — 3 outbound (2 LPG, 1 bitumen) and 2 inbound (empty product tankers) — against Kpler's own 10-day average of 15 COMMODITY VESSELS. (!) Reuters/Kpler describe 25 Aug as 'roughly the same number as on Monday', which does NOT reconcile with the 2 carried for 24 Aug. Kpler publishes a 1.5–2.0x upward revision factor on its most recent week; NO 2→5 delta is printed and none should be inferred. Windward: 17 crossings — 11 inbound (5 AIS-visible, 6 dark) and 6 outbound (5 visible, 1 dark); 7 of 17, or 41%, dark. The zero-outbound day of 24 Aug ended after ONE session. TankerMap: 24 Aug 1, 25 Aug 0, 26 Aug 0 (incomplete at read); 7-day average 1.1 tankers/day against its own ~21/day pre-war reference — tankers only. IMF PortWatch: 3 transits on 23 Aug and NOTHING PUBLISHED SINCE; it publishes weekly with a two-day lag. UKMTO S&P/SeaVision annex counts and US NCAGS-facilitated counts for 25–27 Aug: NOT OBTAINED. Lloyd's List: nothing since 19 Aug. LSEG: nothing.	Reuters 26 Aug (Kpler named); insights.windward.ai 26 Aug; tankernmap.com; straits.live (PortWatch) — Tier 1 data relayed, provider named
Denominators in circulation (\$9.19)	UKMTO/JMIC ~138/day (all transits) · Windward ~140/day · IMF PortWatch 85/day in its JSON and 73/day on its front page, the SAME series with TWO published numbers · TankerMap ~21 tankers/day · Kpler ~15 mb/d, a VOLUME basis and not vessels — (!) NOT to be confused with Kpler's separate 10-day average of 15 COMMODITY VESSELS, which is the same numeral in different units. No percentage-of-normal is quoted anywhere in this document without naming which divisor produced it. On Windward's own basis, 17 crossings is roughly 12% of normal; on PortWatch's JSON basis, 3 transits on 23 Aug is 3.5%	Each provider's own published basis
Blockade tally — UNRESOLVED between two sources	UKMTO Update 089 attributes to CENTCOM: 71 commercial vessels redirected, 3 disabled, 2 boarded, as of 24 August. A Tier 2 daily tracker records CENTCOM's own last published figure as 70 / 3 / 2 as of 23 August and states the accounting was not updated for a third consecutive day. (!) Both are reported; neither is reconciled and no delta is computed across them. The published progression is 44 (3 Aug), 49 (6 Aug), 62 (14 Aug), 67 (20 Aug), 68 (21 Aug), 70 (23 Aug), 71 (24 Aug) — the implied rate runs about 1.6 a day to 14 August, about 0.8 a day to 20 August, then about 1.0 a day since: it fell and then partly recovered, which is not a trend in either direction. (!) The last step, 70 to 71, crosses sources — 70 is the Tier 2 tracker's reading of CENTCOM and 71 is UKMTO 089's — so it is NOT a delta and no rate is derived from it. NO new tally on 26 or 27 August	UKMTO 089 §2C; Tier 2 tracker — both named, not merged

Strand	Detail	Source and tier
CENTCOM / kinetic	NO CENTCOM release dated 26 or 27 August against the live PUBLIC-RELEASES index, read directly. The most recent release of any kind is 15 August; the last COMBAT release inside Iran is 29 July — a 29-DAY GAP. 27 consecutive nights with no US or Israeli strike inside Iran; 7 with no Iranian ballistic launch; 8 with no drone launch. With the 29-day release gap these are FOUR separate clocks on four different measures and are never merged or differenced. (!) Silence is not inactivity — CENTCOM posts blockade tallies through channels other than its releases index. Israeli activity in the window was confined to southern Lebanon and Gaza. The George Washington CSG (CVN-73, CVW-5, USS Robert Smalls, USS Shoup) arrived in the AOR on 19 August and remains in the ARABIAN SEA — it has NOT entered the Gulf of Oman or the Gulf. USS John Finn named on blockade duty	centcom.mil PUBLIC-RELEASES index read direct 27 Aug — Tier 1; USNI Fleet Tracker 20 and 24 Aug — Tier 2
The mine dispute — three positions, no reconciliation	(1) Trump, Truth Social, TUESDAY 25 August: 'All mines have been removed and/or detonated from within the International Waters of the Strait of Hormuz', with a stated Zero Tolerance policy and a threat to destroy any vessel laying new mines. (2) UKMTO/JMIC Update 089, ICOD 251500Z the SAME DAY: mine danger areas still active in and near the TSS, restated by UKMTO on X. (3) Deputy FM Gharibabadi: the claim is 'only aimed at calming the markets', 'no one except Iran knows the location of these mines', and US mine-detection vessels entering the area would be 'very good targets'. (!) Al Jazeera dates those remarks to Tuesday in two 26 Aug news pieces and to Wednesday in a 26 Aug analysis piece — same outlet, same week. Both reported, not reconciled. Expert framing (Tier 2): Mark Hilborne (KCL) — clearance of the main lanes is credible but is not the same as mine-free, and Iran retains re-laying capability; Alex Almeida (Ambrey) — 'mines... have never been the primary threat', drones and anti-ship missiles are. NO new US Navy, CENTCOM or NAVCENT mine statement 26–27 August. Update 090 is the only instrument that settles this	Truth Social via Al Jazeera 26 Aug; UKMTO 089 direct; Gharibabadi via Al Jazeera 26 Aug (Tier 3 relayed by Tier 2)
Incidents in the standing window	Warning 120-26 (24 Aug, 242110 UTC): a tanker struck by a projectile in the engine room, VESSEL DISABLED, crew safe. The vessel is now named in trade reporting as METRO VENETIAN, Liberia-flagged Aframax, outbound with about 704,000 bbl of jet fuel, which proceeded to Fujairah under its own power; the strike fell inside an AIS-dark period running since 13 August. (!) LOCATION DISCREPANCY STANDS: UKMTO says 3nm from the Omani coast, media say 9nm NE of Ash Shishah. DO NOT RECONCILE. Warning 119-26 (24 Aug): a tanker struck 63nm off Yanbu in the RED SEA under a Houthi claim, vessel AMZAN, Saudi Bahri-owned, all crew safe — NOT A HORMUZ EVENT and never to be paired with 120-26 as 'two Hormuz attacks'. UKMTO notes the projectile type is unconfirmed despite the Houthi ballistic-missile claim. NO new Houthi or Red Sea attack on 26 or 27 August. Windward: METRO VENETIAN is the fifth Greek-linked vessel struck in a month and at least the ninth since 28 February	UKMTO 089 warnings annex; Windward 26 Aug; Bahri confirmation via wire
Iranian exports, Kharg and floating storage	Kpler via The National, 26 August, on a NEW and DIFFERENT denominator: Chinese imports of Iranian crude routed THROUGH THE STRAIT averaged about 530 kb/d across July AND August combined — 48% below pre-war and 72% below the October 2024 peak of close to 1.9 mb/d. This is a July+August blended Hormuz-routed average and is NOT the same series as the 534 kb/d August month-to-date against ~823 kb/d in July. Report separately; never splice. China's Suez/Bab el-Mandeb workaround ran 2.62 mb/d in April, 940 kb/d in July and about 1.02 mb/d in August; freight China-bound is \$10–11/bbl on the Suez route against roughly \$5 pre-Houthi. Kharg (Windward, data to 25 Aug): SIX vessels loaded in the past 30 days and only TWO of the six transmitted AIS while loading; five of the six calls were quantifiable on Vortexa's assessment — which draws on berth dwell and imagery, not on AIS alone, which is why more calls are quantifiable than transmitted — and lifted an assessed ~4.65 mn bbl, all bound for China or the UAE. A Nicaragua-flagged tanker entered the eastern terminal on 23–24 August, matching by IMO an OFAC-sanctioned Iranian crude carrier dark in the strait since 20 July. SAR imagery for 25 Aug shows the western and LPG berths idle with a waiting-area backlog. (!) The ~20 dark tankers, the 21–23 mn bbl assessed holding and the broadcast name SYRON are NOT restated in Windward's 26 August edition and are NOT carried forward as current. AMARA (IMO 9333280) remains stationary off Qeshm — (!) Windward dates the seizure to 20 August in one product and to 17 August in another; the conflict is flagged, not resolved. Confirmed by no party. (!) DEFINITIONAL TRAP UNCHANGED: Kpler's ~80 mn bbl is crude stored OUTSIDE the blockade zone, a DIFFERENT series from the 110 mn bbl of 18 August, which was crude on water INSIDE the Gulf and Gulf of Oman. Neither was republished in the window. Do NOT print 110 → 80 as a decline. An Iranian loading rate in kb/d for late August: NOT OBTAINED, for a second consecutive edition	Kpler via The National 26 Aug; insights.windward.ai 26 Aug; tankernap.com
Freight and war risk	Baltic Exchange week 35: NOT PUBLISHED — direct fetch returned empty; due 28 August. Week 34 route level stands: TD3C MEG–China WS570, 88 points firmer, standard Baltic VLCC round-trip TCE close to \$585,000/day; TC1 WS536.67; TC5 WS565.63; TC17 rose from WS488.57 to WS507.86 on the week, on a \$56,997/day round-trip TCE. (!) METHODOLOGY BREAK RESTATED: the week-33 AGGREGATE TCE series (VLCC \$234,821/day, Suezmax \$269,824/day, Aframax \$77,182/day) is absent from week 34 and route-level figures are NOT its continuation. No bridging figure has been published. WAR RISK — EXPLICIT NEGATIVE: no named broker has published a percentage-of-hull figure dated 25–27 August. (!) A 26 August trade item carrying '7.5% to 10% of hull value' is an AGGREGATOR RE-PUBLICATION of the Marsh estimate of 22 July, traced through Beinsure to the WSJ and Reuters — a re-publication, NOT a reprinting. Marsh, 22 July, remains the newest named-broker point estimate. Aon, WTW, Gallagher and Lockton: nothing dated in the window. Joint War Committee unchanged at JWLA-034, circulated 29 July, effective 12 August. No International Group or club statement 26–27 August. straits.live's '40x normal' is that site's own composite multiple, is not a broker quote and is never blended with a percentage of hull	balticexchange.com direct; trade press 26 Aug; JWC circular
Ports	NO Gulf port throughput update dated 26–27 August. NOT FOUND; ADNOC L&S nothing at all in the window. Standing: Jebel Ali Q2 throughput 374,000 TEU, –90.1% year on year, and H1 3.1 mn TEU, –59.5%; the port has fallen out of the global top thirty. DP World is spending about \$100 mn a month keeping it ready against throughput at roughly 10% of its prior-year quarterly base; the port is fully operational with no physical damage, so the constraint is vessel traffic, not infrastructure. Cargo is rerouting via Fujairah, Khor Fakkan, Oman and the Jeddah land bridge	Splash247 and DP World H1 reporting, earlier August — carried as standing context

A1.5 · Retail fuel — three series, never compared

\$9.19 in its sharpest form. THREE DISTINCT SERIES: AUTMUSAG is AAA ALL-GRADES and is the SCORED reference, last printing \$4.83 on 25 August; USRFRUSA is DOE REGULAR, surveyed Monday and published Tuesday, at \$4.085; and AAA's own published REGULAR headline is a THIRD series at \$4.1014 on 26 August. They are never compared with one another and no delta is ever computed across them. Read directly from AAA for 26 August: regular \$4.1014 (+0.45 cents on the day, reversing the 25 August

fall, and still below the month-ago \$4.1101); mid-grade \$4.6123; premium \$4.9939; DIESEL \$5.6230; E85 \$3.1712. Diesel at \$5.6230 is a fourth consecutive war high, taking out the \$5.6199 of 25 August and leaving 19.29 cents to the AAA all-time record of \$5.8159 set on 19 June 2022 — narrowed from 19.60 cents. But the seven-day change DECELERATED to +11.88 cents from +15.22. The AAA record for regular remains \$5.0165 (14 June 2022). No AAA print for 27 August was published at the cut. There was NO 26 August EIA weekly retail print — that series ran on 25 August and next runs on 1 September; its 24 August week stands at on-highway diesel \$5.652, +19.8 cents, and regular \$4.085, +3.6 cents, with California diesel \$7.040 (+25.5c), PADD5 \$6.407, PADD3 \$5.481 (+24.4c), PADD2 \$5.636 and PADD1B \$5.840. The scored series went dark on 26 and 27 August. \$9.30 binds absolutely here: the 14 August precedent — a six-session decline nine cents from its downgrade condition that reversed completely on two upward backfills — is why no trend is read through dark sessions in either direction.

A2.3 · CROSS-ASSET AND MACRO RECORD — FULL

The 26 August US data cluster, all Tier 1 primary, and all of it landed BEFORE the Singapore cut. July personal income and outlays (BEA 26-39): headline PCE price index +0.2% m/m and +3.7% y/y, both above a +0.1% / 3.6% consensus; core PCE +0.2% m/m and +3.3% y/y, both in line. Personal income +0.4%; disposable income +0.5%; nominal PCE +0.2%; REAL PCE +0.0% — spending stalled in real terms. Saving rate 3.0%. The composition is the finding: goods spending FELL \$49.9bn while services rose \$86.2bn, and within goods the largest single POSITIVE contributor was gasoline and other energy goods at +\$16.4bn. That is the war's pass-through visible in the primary spending table — consumers cutting goods broadly while paying more for the one good the war repriced. Next release 30 September, with the annual NIPA update.

Durable goods orders, July (Census, 26 Aug): new orders +1.1% to \$339.3bn, beating consensus, after +0.5% in June; ex-transport +0.4%; ex-defense +1.3%; transportation equipment +2.3% to \$116.2bn; computers and electronics +3.1%. Q2 GDP second estimate (BEA 26-38, 26 Aug): real GDP unrevised at +1.5% SAAR after +2.1% in Q1, with consumer spending revised up and offset by an upward import revision. Real final sales to private domestic purchasers revised UP 0.3pp to +4.2%. Real GDI +2.2%; the GDP/GDI average +1.8%. Corporate profits +\$400.9bn after +\$74.4bn. Inflation revised UP: gross domestic purchases price index +5.8% (+0.1pp), PCE price index +5.3% (+0.2pp), core PCE +3.6% (+0.2pp). Atlanta Fed GDPNow: 4.6% for 2026:Q3, revised up on 26 August from the 4.0% dated 18 August, next update 1 September. Hold the pieces together, and note that GDPNow is a REAL nowcast, not a nominal one: 4.6% real for Q3 sits beside a Q2 real final-sales-to-private-domestic-purchasers revision UP to +4.2% real, and beside a JULY — one month, not the quarter — in which real consumer spending printed FLAT and headline inflation printed 3.7% y/y. The picture is internally strained rather than nominal-heavy, and it is the inflation half of it that the front end repriced.

The bond session, and the attribution. Bloomberg, 26 August — 'Treasury's Edge Lower Before PCE Data With Fed Risks in Focus', framing front-end weakness as pre-PCE positioning plus Fed risk, and reporting traders holding a quarter-point hike for 2026, with better than 60% odds on a second by mid-2027 (relayed again, and labelled, under the Fed path below). That is the cleanest in-window attribution and it is consistent with the tape: the 2-year rose 3.52 bp, the 5-year 2.66, the 10-year 1.77 and the 30-year 0.20, flattening 2s10s to 43.308 bp, the flattest close since 6 August (42.614) and 12.33 bp flatter than the 55.64 pre-war anchor. Trading Economics (Tier 2) adds that the long end was supported by softer crude and by investors assessing the expanded Treasury buyback programme. (!) One Tier 3 aggregator put 2s10s at '+46bp' for 26 August against the extract's 43.308; the extract is the authority and the two are NOT reconciled. NO Fed Board speech is posted for 26 or 27 August on [federalreserve.gov](https://www.federalreserve.gov)'s own speeches index, read directly, and no Fed commentary on the energy shock could be dated into the window — a confirmed negative against a named index, offered without causal gloss.

The Fed path. The live risk is a September HIKE, not a cut: the 28–29 July FOMC held 3.50–3.75% on a 9–3 vote with ALL THREE dissents FOR A HIKE. The next meeting is 15–16 September and carries a Summary of Economic Projections and a press conference. NO probability is ADOPTED by this document and none is scored on: no direct CME FedWatch print is obtainable — the page is a JavaScript embed. TWO are RELAYED here and labelled, and the distinction between relaying and adopting is the point: an unnamed aggregator dated 20 August, Tier 3 and six days stale to this window, relayed roughly 68% priced to a hold; and Bloomberg's 26 August standfirst reports traders holding a quarter-point hike for 2026 with better than 60% odds on a second by mid-2027. Jackson Hole runs 27–29 August on the theme 'Financial Innovation: Implications for Payments and Policy'. The Kansas City Fed has NOT published the programme — its practice is to release it the evening the symposium opens — and Warsh's first keynote as Chair is 10:00 ET Friday 28 August. The programme is unpublished, so its contents are unknown; on the announced theme alone, an energy-shock signal would more likely come from remarks around the symposium than from a paper within it — an inference from the theme, not a reading of the programme.

Auctions and buybacks. The 26 August auction internals are in edition §2.2. Two further points belong here. First, the FRN caution: the \$28bn 2-year FRN reopening cleared at a 0.0550% high discount margin on a 3.14 bid-to-cover with dealers at 33.08% of competitive-accepted — floating-rate dealer shares are structurally higher than coupon shares and this figure must NEVER be spliced into the coupon-backstop series (12.34%, 2.09%, 10.90%, 10.05%). Second, a checkable discrepancy in Treasury's own documents: the 19 August release sb0607 raised the nominal long-end liquidity-support buyback maximum from \$2bn to at least \$4bn per operation for 9 September to 4 November, but the Q3 tentative buyback schedule published on 5 August still shows the OLD \$2bn maximum against the 10 September 10Y–20Y operation. The schedule PDF has not been reissued. There is NO buyback operation on 26 or 27 August and no follow-up announcement — a confirmed negative against [treasury.gov](https://www.treasury.gov) read directly. The \$44bn 7-year note is auctioned at 1:00pm ET on 27 August and initial claims for the week to 22 August are released at 8:30am ET the same day: both are PROSPECTIVE (\$9.46), not unobtained. The 206k claims print belongs to 20 August and is not dated into this window.

Iran's domestic transmission — Tier 2 and Tier 3, carried as context and NOT used to move a probability. The rial opened at 2,037,000 to the dollar on the open market, touched a record 2,060,000 intraday and eased to about 2,015,000, against an official CBI rate near 1.5 mn; the Statistical Centre of Iran reports inflation near 90%. A petrol shortage is reported at roughly 135 mn litres a day of consumption against about 121 mn of output — a 14–15 mn litre daily shortfall — with overnight queues and the government signalling a price rise and rationing within weeks. Petrol pricing is the precise trigger of the November 2019 protests, so this is a live domestic-instability channel; it is recorded here and deliberately NOT used to move the regional-relapse or full-war lines on

single-stream sourcing. Separately: the Hormuz transit-fee article approved by the National Security and Foreign Policy Committee on 23 August is NOT ENACTED — it requires a full-parliament vote and Guardian Council review, and no plenary vote was reported on 26 or 27 August. SNSC Secretary Mohsen Rezaei made no public intervention at all in the window; the file has visibly moved from the Supreme National Security Council to the foreign ministry. His 24 August naming of Saudi and Emirati bypass pipelines as targets is single-stream Tier 3, is unretracted, and is NOT used to move a probability.

A7 · SOURCE LOG

Tier	Sources used in this edition
Tier 1 — market data	Tecity Bloomberg extract, <i>US Iran BBG Data.xlsx</i> , refreshed 27 August 2026 (173 raw rows × 99 columns; 170 data rows from 31 December 2025). Tickers CO2, COA, CL2, CLA, NGA, TZTA, JGLA, USGG2YR/5YR/10YR/20YR/30YR, USYC2Y10, USGGBE10, USGG5Y5Y, SOFRRATE, MOVE, VIX, AUTMUSAG, USRFRUSA, DXY. Header row scanned dynamically; column indices are never hardcoded. ALL prices, yields, spreads and both gasoline series in this document come only from this extract and never from the web.
Tier 1 — primary documents read directly	UKMTO Update 089 (ICOD 251500Z), read IN FULL by DIRECT FILE URL, with Updates 090 and 091, Warning 121-26 and VRA Overview No. 4 all probed by direct file URL and all empty · api.fiscaldata.treasury.gov auctions_query for the 26 August 5-year (CUSIP 91282CRK9), the 2-year FRN (91282CRD5) and the announced 7-year (91282CRJ2) · home.treasury.gov press releases and ofac.treasury.gov Recent Actions , both read live on 27 August · centcom.mil PUBLIC-RELEASES index , read live · fm.gov.om news index , read live · federalreserve.gov FOMC calendar and speeches index · kansascityfed.org symposium page · atlantafed.org GDPNow · BEA releases 26-38 and 26-39 · Census durable goods · gasprices.aaa.com · eia.gov Gasoline & Diesel Fuel Update · treasury.gov Q3 tentative buyback schedule · insights.windward.ai · tankermap.com · straits.live (IMF PortWatch relay) · balticexchange.com
Tier 1 — news	Reuters 26 Aug — where Reuters relays Kpler it is treated as Tier 2 with the provider named · AP via Fortune 26 Aug on the absence of a Chinese-bank designation · Bloomberg 26 Aug (headline and standfirst only; the body is paywalled and is NOT relied on beyond them) · CNBC 26 Aug (headline confirmed, body returned empty) · Al Jazeera 26 Aug, including its own Trump interview · Euronews 26 Aug · The National 26 Aug · The Peninsula 25–26 Aug on Qatar
Tier 2 — single-source, trade press, or a named provider relayed	Windward 26 Aug (data as of 25 Aug) · The National 26 Aug relaying Kpler · USNI Fleet and Marine Tracker 20 and 24 Aug · Axios 25 Aug on the Rubio remarks, two unnamed officials · GlobalSecurity.org daily summary 26 Aug — used for the CENTCOM tally conflict and the kinetic-pause counts only, and NOT treated as authoritative on maritime incidents · Business Insurance 26 Aug — an aggregator re-publication of Marsh, flagged as such · Trading Economics 26 Aug · Oil & Gas 360 and OilPrice 25–26 Aug — the EIA weekly is sourced to a verbatim trade reproduction because every first-party EIA endpoint served a stale document or returned empty · Argus (Fielding) and Goldman Sachs (Dart, Cyr) via Euronews 26 Aug · TheStreet 26 Aug for the Sen and Garner quotes · Gas Infrastructure Europe storage data
Tier 3 — state media and Iranian official sources, labelled and not used for anything market-moving	Gharibabadi's corridor description on Iranian state television, relayed by Al Jazeera, Reuters and Euronews · the IRGC spokesman on agreed shares of waters and revenues · army spokesman Akraminia on passage by Iranian permission · Mehr and IRNA on the transit-fee article · Chinese MFA (Lin Jian) 25–26 Aug · Iranian domestic economic reporting on the rial, inflation and the petrol shortage
(!) REJECTED or NOT USED	(!) A claim of agreed corridor coordinates — a northern inbound lane in Iranian waters and a southern outbound lane in Omani waters — traces to an Al Jazeera liveblog dated 5 AUGUST, not to this window, and is NOT carried as a 26–27 August fact. · A single-sourced report that the permanent arrangement must be negotiated within 30–60 days is uncorroborated and is reported as such rather than used. · The '7.5% to 10% of hull' figure republished on 26 August is the Marsh estimate of 22 July and is NOT a new repricing. · The ~20 dark tankers and 21–23 mn bbl Kharg holding are not restated by Windward in the window and are not carried. · Claims that current diesel levels imply CPI above 8% come from an aggregator with no named economist and are not used. · Waller's remarks on prolonged elevated oil prices could not be dated and are therefore not printed. · An IAEA ministerial held in Washington on 26–27 August produced no Iran-specific output that could be sourced and is not used.
NOT OBTAINED register	UKMTO Update 090 and 091 · VRA Overview No. 4 · Warning 121-26 or later · UKMTO S&P/SeaVision annex and NCAGS counts for 25–27 Aug · CENTCOM blockade tally for 25, 26 or 27 Aug · Kpler counts for 26 or 27 Aug · Lloyd's List transit brief since 19 Aug · LSEG entirely · IMF PortWatch past 23 Aug · an Iranian loading rate in kb/d for late August (second consecutive edition) · Kharg terminal throughput · updates to Kpler's 80 mn bbl or 110 mn bbl storage series · a UAE implementing decree, carve-out, licence regime or CBUAE circular (now 8 days) · EU, UK/OFSI and UN action · Chinese counter-sanctions beyond the standing blocking regulations · Baltic week 35 and any bridging figure to the discontinued week-33 aggregate TCEs · a named-broker war-risk figure newer than 22 July · JWLA-035 · any P&I or International Group statement · a first-party EIA WPSR fetch for the 21 Aug week (\$9.45) · a direct CME FedWatch print · the Jackson Hole programme · a Gassco or Norwegian outage notice · a JKM assessment for 27 Aug · a named attribution for the 25–26 Aug TTF and JKM reversal · a 26 Aug Brent settlement from first-party wire copy · any Gulf port throughput or ADNOC L&S item

A8 · ON-DEMAND UPDATE PROTOCOL

#	Step	Detail
1	Refresh and verify the extract	Never build an edition off a stale extract (\$9.22). Check the file mtime AND parse the sheet — a stale mtime and a stale row are different failures. If the latest row is not newer than the last edition, stop and say so. This edition: the extract carries a 27 August row against the 26 August row the last edition ran on. It is fresh.
2	Parse with a dynamic header scan	Column indices move between uploads. Auto-detect the Brent and WTI front month and take whatever label the header scan returns for DXY. Re-verify the 27 February anchor field by field — done this edition, unchanged on all sixteen fields.
3	Run all THREE integrity checks	Row-level (\$9.8), field-level identical-to-4dp (\$9.35), and the continuation-versus-active BASIS check (\$9.41). All three ran and all three CLEAR this edition, with no restatement and no backfill.
4	Compute deltas and test every trigger	d/d, w/w five rows back, and versus pre-war; explicit trigger tests for the four market channels plus Stage-4 A, B and C. Run min, max and last-prior-occurrence on the full column before writing ANY superlative (\$9.32).
5	Verify the news, and re-verify what was inherited	Every claim needs a named source and an exact date, and negative claims decay fastest of all (\$9.23). State the exact query behind every negative. Say NOT OBTAINED rather than estimating — and distinguish NOT OBTAINED from PROSPECTIVE (\$9.46).

#	Step	Detail
6	Build, then QA in three passes	A numeric harness against the dataframe; an adversarial PROSE pass by a reviewer with no access to the source data, run TWICE because fixing introduces defects (§9.42); and a VISUAL render, which is not optional (§9.43). Re-run the numeric harness AFTER the prose fixes.
7	Deliver both documents	The edition and the annex go into the project root together. A file that is not committed never reaches the reader. The annex does not go into the dashboard PDF folder, because the score-history script regexes a score sentence out of every PDF there and the annex has none.

A9 · METHODOLOGY

Six channels, each scored 0–5, summed to 0–30. Bands: 0–7 watch; 8–14 stress; 15–21 systemic-risk watch; 22–30 crisis. Maritime denial and escalation risk are event channels; oil, US inflation impulse, Treasury stress and political stress are market channels scored on confirmed closes.

(a) Confirmed closes only for market channels. No market channel moves on an intraday print. The 27 August snapshot in this document moves nothing. (b) Hysteresis. Upgrades fire on a sustained break; downgrades require a sustained reversal past a wider threshold. It was vindicated again this edition: the 5y5y forward broke below its own firing trigger on 25 August and closed back above it on 26 August, the second such single-session round trip after 13–14 August. (c) The scale saturates in BOTH directions (§9.7, §9.27). FIVE of six channels are at the cap, so deterioration cannot raise this score through any of them — the sole remaining route up is the oil channel at 2 — and no amount of financial improvement short of a documented downgrade can lower it. A flat 27 does not mean a stable situation and this document says so every time it prints one.

Rules exercised this edition, named so the reader can audit them. §9.11 — an announcement is not an event; the escalation channel holds despite named corridor parameters. §9.15 — stated in full because it is the most-invoked rule in this edition: WHERE A CHANNEL HAS TWO DOWNGRADE LEGS, IT IS ONLY NEARING A DOWNGRADE WHEN BOTH LEGS MOVE TOWARD IT IN THE SAME SESSION; LEGS THAT MOVE IN OPPOSITE DIRECTIONS ARE ROTATING, AND ROTATION IS NOT APPROACH. It is RESTORED after one session: the Treasury legs converged on 25 August and rotated apart on 26 August, and the last edition's statement that §9.15 no longer fitted is corrected here rather than left standing. §9.18 — a single sub-threshold close is a session and not a regime; at seven consecutive closes the MOVE run is a regime and is described as one. §9.19 and §9.40 — every denominator named, on transit counts and on auction allotments alike. §9.24 — three providers gave three transit counts on three vessel universes for 25 August and all three are published, with IMF PortWatch named separately as a fourth universe on an earlier date. §9.26 — the trigger that fired the US-inflation upgrade broke and retraced, and the rule was NOT moved to match it. §9.30 — the scored gasoline series is dark for two sessions and no trend is read through it. §9.32 — every superlative bounded and checked against the full column; the MOVE claim was trimmed in draft from a regime low to a second-lowest. §9.36 and §9.41 — both oil bases quoted, basis check run and cleared. §9.39 — Threshold A reported as untestable as written rather than as declining to arm. §9.43 — a visual render was run before delivery. (!) ONE OPEN ITEM IS DISCLOSED RATHER THAN DECIDED: the oil channel's downgrade is written as a mediated pause AND 'a close' at or below \$72.48, while its upgrade requires a SUSTAINED break and every other market channel's downgrade carries 'sustained' or a three-close condition. As written, oil's downgrade is easier to trip than its upgrade, which inverts (b). §9.21 and §9.33 require replacing a rule that has stopped discriminating rather than carrying it — but the condition is 14.46 away and is not live, so this edition DISCLOSES the asymmetry rather than settling it under time pressure.

TWO NEW RULES ENTER THE METHODOLOGY THIS EDITION. §9.45 — A PRIMARY SOURCE THAT SERVES A STALE DOCUMENT IS A FAILED SOURCE, AND THE FAILURE CAN BE PATH-WIDE. The standing caution was that *ir.eia.gov/wpsr/wpsrsummary.pdf* had served a December 2025 document to a fetcher. This edition established that the problem is broader: *ir.eia.gov/wpsr/overview.pdf* served the same December 2025 balance sheet, *table14.csv* returned empty, and — most seriously — the recommended substitute endpoints *eia.gov/petroleum/supply/weekly/pdf/highlights.pdf* and the TWIP landing page BOTH still served the week ending 14 August after the 21 August week had been released. The 21 August figures in this document are therefore sourced to a verbatim trade reproduction and the SPR level to the DOE's own SPR office, and that sourcing is disclosed on the figure rather than in a footnote. Treat the whole EIA weekly path as untrusted until a first-party fetch is confirmed fresh, and never assume that a working endpoint yesterday is a working endpoint today. §9.46 — DISTINGUISH 'NOT OBTAINED' FROM 'PROSPECTIVE'. This monitor cuts at Singapore morning, which is the evening of the PREVIOUS US day. An edition dated 27 August covers a US 27 August that has not begun. The 7-year auction, initial claims and the first day of Jackson Hole are not missing data and must not be entered in the NOT OBTAINED register, which exists to record retrieval failures. Writing a scheduled future event as unobtained overstates the document's blind spots and understates its own timing advantage (§9.14); the register is only credible if everything in it was actually sought and actually missed.

Restatements and comparability. Vendor restatements are normal and make absolute levels non-comparable across editions, though directional analysis is continuous. No restatement occurred this edition and no field backfilled. A contract roll does the same thing to a continuation series silently, which is why the basis check is now a standing check. The dual gasoline series is never re-based:

AUTMUSAG is the scored reference and preserves the \$3.52 anchor and the \$4.75 trigger; USRFRUSA is corroboration only. The pre-war anchor is the 27 February 2026 close and is re-verified field by field every edition; it is unchanged to date.

A10 · ANCHOR AND TRIGGER LEVELS

A10.1 · Pre-war anchor — 27 February 2026 close, re-verified this edition, unchanged

Brent	WTI	2Y	5Y	10Y	30Y	2s10s	5y5y	10y BE	MOVE	VIX	DXY	Gasoline AAA	Henry Hub	TTF	Asia LNG
\$72.48	\$67.02	3.3749 %	3.502 %	3.9375 %	4.6106 %	+55.64	2.142%	2.257%	73.38	19.86	97.608	\$3.52	\$3.063	€31.23	¥1,669

A10.2 · Live trigger state on the 26 August close

Channel	Score	Upgrade	Downgrade	Distance
Maritime denial	5	At max	Verified reopening AND traffic above 25% of the UKMTO/JMIC ~138/day all-transit baseline for 10 sessions	Neither leg is close; the traffic leg is measured on the SCORED DIVISOR. An ANNOUNCED corridor is not a verified reopening; 17 Windward crossings is 12.3% of the scored ~138/day basis and 12.1% of Windward's own ~140/day. (!) Dividing Windward's 17 crossings by PortWatch's 73/day front page would read 23% — a cross-universe splice \$9.24 forbids and this document does not make; it is why the rule now names its divisor
Oil price shock	2	Brent above \$95 sustained → 3	Mediated pause AND a close at or below \$72.48 → 1	Upgrade \$8.06 on CO2 and \$7.16 on the active — WIDENED from \$7.73 / \$6.42, a SECOND consecutive widening. Downgrade price leg \$14.46
US inflation impulse	5	At max	5y5y sustained at or below the 2.142% anchor → 4	16.12 bp, WIDENED from 15.71. The 2.30% level that FIRED the upgrade was breached on 25 Aug and RECOVERED on 26 Aug — a second single-session round trip
Treasury stress	5	At max	30-year close below 5.00% WITH MOVE below 75, sustained → 4	Yield leg fails by 16.71 bp, WIDENED from 16.51; volatility leg satisfied for a SEVENTH consecutive close at 69.44. THE LEGS ROTATED APART AGAIN
Political stress	5	At max	Three consecutive AUTMUSAG closes at or below \$4.60 with no intervening print above \$4.70 → 4	23 cents, WIDENED from 22. Last print \$4.83 (25 Aug), the highest since 5 June; DARK on 26 and 27 Aug (\$9.30)
Escalation risk	5	At max	Mediated stand-down AND talks resume → 4–3	The stand-down leg is the closest this monitor has recorded, at a 29-day CENTCOM combat-release silence; the talks leg went BACKWARDS — Trump stated on 26 Aug that he has no timetable at all
Stage-4 A	—	Failed-auction test: an auction clearing with a tail above its when-issued level	—	NOT ARMED — UNTESTABLE AS WRITTEN (\$9.39). Treasury publishes no when-issued level, so no first-party Treasury source can confirm a tail. 5-year dealer take 10.05% of competitive-accepted, a FOURTH consecutive low print; directs 28.44%
Stage-4 B	—	30-year above 5.20% AND 10-year above 4.65%	—	STILL LAPSED and did NOT re-arm — 30-year short by 3.29 bp, 10-year by 0.35 bp, the narrowest single-leg miss recorded. FIFTH lapse, now two closes old; TENTH state, NINTH change since 29 July — the ordinals are recomputed each edition and the 26 August edition's were one too high. The 10-year leg is SATISFIED on the 27 Aug intraday
Stage-4 C	—	MOVE above 130	—	69.44 — 60.56 points below. NOT the furthest of the war (war low 65.39, 18 June) and NOT the lowest since the sub-75 phase began on 12 August (69.23, 13 August)
