

## ANNEX · 28 AUGUST 2026

This annex is the companion to the 28 August 2026 edition and is built every day. The edition is capped at eight pages; material is RELOCATED here, never deleted. Section numbering tracks the edition: A1 carries the full commentary for the live-tape tables and the gasoline chart, the full strait-operational record and the freight and war-risk record; A2.3 the full cross-asset and macro record; A7 the source log; A8 the on-demand update protocol; A9 the methodology; A10 the anchor and trigger levels. A figure marked NOT OBTAINED — or, equivalently, NOT FOUND — was sought and missed, and is absent from the record rather than unchanged. A figure marked PROSPECTIVE relates to a session that had not occurred at the Singapore cut and is not a retrieval failure (\$9.46).

## A1 · LIVE TAPE — FULL COMMENTARY

## A1.1 · Data integrity — the field-level check FIRES, and there IS a restatement

**Row-level check (\$9.8): CLEARS.** The 27 August row refreshed on every field that had a 27 August snapshot and additionally carries MOVE at 69.86 and VIX at 14.51, both blank on the 27 August intraday. **Not one of the EIGHTEEN scored fields that PRINTED on the 27 August row is identical to its 26 August value; AUTMUSAG and USRFRUSA did not print and are handled below.** The row is a genuine settled close, not a stale snapshot.

**Field-level identical-to-4dp check (\$9.35): ONE FIRING, and it is on the scored gasoline series.** AUTMUSAG's 26 August cell, reported BLANK in the last edition, has backfilled at \$4.83 — identical to the 25 August print to four decimal places. \$9.35 is explicit that the row-liveness of neighbouring fields tells you nothing about whether a given field refreshed, so the cell is reported UNRESOLVED and NO day-on-day change is asserted for it. (!) Note the honest qualification: AUTMUSAG is a two-decimal series that has printed genuinely unchanged values before — \$4.82 ran on four consecutive sessions, 19 to 24 August — so an identical value here is materially more likely to be real than it would be on a four-decimal yield. The rule is applied anyway, because the cost of under-claiming for one session is trivial and the trigger distance is 23 cents on either reading. SOFR ALSO BACKFILLED — 26 August now reads 3.64 where the last edition reported no print — and that one is a genuine repair, differing from its 25 August value (\$9.10's two-way test working as designed). Six series have no 28 August print — AsiaLNG, MOVE, VIX, SOFR, GasAAA and GasDOE — and are reported BLANK rather than carried (\$9.9).

**Basis check (\$9.41): CLEARS on both contracts.** The Brent CO2/COA basis runs 1.31 (25 Aug), 0.90 (26 Aug), 1.18 (27 Aug close) and 1.05 (28 Aug intraday) — compression, a modest widening, then compression again, no sign change and no step, so there is no Brent roll in this window. The WTI CL2/CLA basis runs 1.48, 1.38, 1.56 and 1.53 across the same days; the roll of 21 August is behind us, so WTI day-on-day is comparable from 21 August forward but NOT across 20–21 August.

**RESTATEMENT CHECK: THERE IS A RESTATEMENT, AND IT IS CONFINED TO THE GAS COMPLEX.** Henry Hub and TTF were restated UPWARD by the vendor across all three of 24, 25 and 26 August: Henry Hub 2.782 → 2.835, 2.770 → 2.821 and 2.842 → 2.874; TTF 68.320 → 68.457, 66.588 → 66.722 and 65.626 → 65.777. Every OTHER field on those three dates is unrestated — Brent, COA, WTI, CLA, JGLA, DXY, the full UST curve, 2s10s, BE10, 5y5y, MOVE, VIX, AUTMUSAG and USRFRUSA all read identically to what this monitor published — and the 21 August 30-year still reads 5.2709. (!) THREE CONSEQUENCES, STATED RATHER THAN ABSORBED. First, the gas levels in this document are NOT comparable with prior editions (A9): the 'Henry Hub 7.22% below pre-war' the last edition published now reads 6.17% on the same session, because the vendor moved the data and not because the market did. Second, the TTF WAR-RECORD CLOSE has moved: it was €68.320 on 24 August and is now €68.457 — a record level that changed by restatement. Third, the 27 August reconciliation gaps for Henry Hub and TTF are CONTAMINATED and are excluded from the headline characterisation of the session (A1.2), on the same logic by which \$9.37 forbids computing a reconciliation gap against a carried field: a gap that mixes a timing miss with a restatement measures neither.

## A1.2 · Reconciliation of the 27 August snapshot — a one-direction miss, and four readings withdrawn by name

\$9.1 requires the Singapore-AM snapshot to be reconciled against the settled close every edition, and \$9.20 and \$9.31 require the narrative conclusions built on it to be withdrawn BY NAME where they fail. The 27 August close ran ABOVE the snapshot on EVERY field measured — the miss was in ONE direction across energy, the dollar and the entire 2- to 30-year sector. This is the \$9.31 pattern, not the \$9.12 both-directions pattern, and it is the pattern that most often falsifies a de-risking narrative.

| Field               | 27 Aug snapshot          | 27 Aug close             | Gap                                            |
|---------------------|--------------------------|--------------------------|------------------------------------------------|
| Brent CO2 / COA     | 86.42 / 87.23            | 88.52 / 89.70            | +\$2.10 / +\$2.47                              |
| WTI CL2 / CLA       | 80.30 / 81.73            | 81.97 / 83.53            | +\$1.67 / +\$1.80                              |
| Henry Hub / TTF     | 2.868 / 66.100           | 2.914 / 68.268           | (!) EXCLUDED — restatement-contaminated (A1.1) |
| DXY                 | 99.122                   | 99.159                   | +0.037                                         |
| 2-year / 5-year     | 4.2217 / 4.3820          | 4.2320 / 4.3996          | +1.03 / +1.76 bp                               |
| 10-year / 30-year   | 4.6624 / 5.1827          | 4.6762 / 5.1931          | +1.38 bp / +1.04 bp                            |
| 2s10s / BE10 / 5y5y | 43.862 / 2.3277 / 2.3005 | 44.014 / 2.3335 / 2.3182 | +0.152 / +0.58 / +1.77 bp                      |

(!) ONE TABLE CAVEAT: USYC2Y10 is a separate Bloomberg series and is NOT the arithmetic difference of the printed 2- and 10-year generics — 4.6762 minus 4.2320 is 44.42 against the printed 44.014, and 4.6624 minus 4.2217 is 44.07 against the printed 43.862 — so the 2s10s gap of +0.152 bp will not reconcile to the +1.38 and +1.03 bp above it. The residual is not a constant offset. The spread series is the authority for 2s10s and the generics are the authority for their own tenors; no figure is derived across them. Decompose it rather than labelling it. At the ten-year point the move splits: nominal +1.38 bp against a breakeven +0.58, so about 0.80 bp of the ten-year settle was REAL yield and the balance compensation — the reverse of 26 August, when the whole ten-year move was compensation. The largest single gap on the curve is the 5y5y forward at +1.77 bp, which is why the inflation channel's distance moved more than any other trigger in this edition. FOUR READINGS FROM THE 27 AUGUST EDITION ARE WITHDRAWN BY NAME. (a) 'Brent has now closed down on three consecutive sessions' and '\$8.06 from the \$95 upgrade, WIDENED from \$7.73 — a second consecutive widening': the settled close was +\$1.58 at \$88.52, the run ended at three, and the gap NARROWED to \$6.48. The score grid's 'Held — gap widened again' is withdrawn with it. (b) The intraday reading that the 30-year

failed Threshold B by 1.73 bp: the close failed by 0.69 bp. (c) '\$9.15 is restored' was correct about 26 August and is NOT a trend: on 27 August the two Treasury legs did not rotate, they both moved away. The rule's applicability is re-tested every session and it does not apply to this one. (d) 'Henry Hub closed 7.22% below its pre-war anchor': on the restated figure that session reads 6.17%. That is a restatement, not a snapshot miss, and it is the one withdrawal in this list that the Singapore cut did not cause. THREE FURTHER CORRECTIONS, smaller but stated: the last edition reported SOFR as having no 26 August print — it has backfilled at 3.64; it reported AUTMUSAG as DARK on 26 August — it has backfilled at an UNRESOLVED \$4.83; and it reported that the Kansas City Fed had NOT published the Jackson Hole programme — it published on the evening of 27 August, exactly as that edition's own description of KC Fed practice predicted. AND ONE INHERITED NEGATIVE CLAIM IS CUT BACK UNDER \$9.23: the last two editions wrote that the un-issued Iran–Oman joint DECLARATION is 'Qatar's gate on all mediation'. Nothing published in this window supports it — Qatar's prime minister engaged in Tehran on 27 August with the framework still only 'discussed', and Doha has never published such a condition. The narrow claim that survives is that the joint DECLARATION has not been issued, which is distinct from the 25 August joint STATEMENT, which was. The claim was load-bearing for the mediated-pause line and it is cut back rather than repeated. TWO WATCHLIST QUESTIONS RESOLVED, BOTH NEGATIVE: Threshold B did not re-arm on the 27 August close, and Brent did not take a fourth down-close.

### A1.3 · Energy, gas and the physical record — full commentary

**Oil.** Brent CO2 closed \$88.52 on 27 August, +\$1.58, ending a three-session down-run that had taken it from \$92.67 on 21 August to \$86.94; the active COA closed \$89.70, +\$1.86. The 28 August intraday gave back 39 cents on CO2 and 52 on COA. Week on week the two bases diverge and are labelled separately: on the intraday against the 21 August close, CO2 is -\$4.54 and COA -\$5.21; against the pre-war anchor of \$72.48 the scored series is +\$16.04, or +22.13%. NO named, dated wire attribution for the 27 August move could be sourced and none is asserted. The one thing the record does support is a negative: nothing in the Gulf changed on 27 August that would explain a \$1.58 rally. (!) The same calendar day carried a 203k claims print and a 7-year auction; NO link between either and the oil settle is claimed and none should be read in.

**Gas** — the structural divergence, restated data, and one superlative carefully NOT made. TTF closed €68.268 (27 Aug), +€2.491 and +118.6% versus its €31.227 pre-war anchor; the 28 August intraday printed €68.620. (!) The war-record CLOSE is €68.457, set on 24 August and itself restated up from the €68.320 this monitor published. The 27 August close is the SECOND-highest CLOSE of the war and the 28 August €68.620 is an INTRADAY on a series that closes once a day — \$9.32 forbids building a record claim on it, and none is made here. Asia LNG closed ¥3,687, +64, the second-highest close of the war behind the ¥3,793 of 25 August, and stands +120.9% versus pre-war. Henry Hub closed \$2.914, 4.86% BELOW its \$3.063 pre-war anchor — (!) a discount that narrowed from 6.17% on the RESTATED 26 August close. The 7.22% this monitor PUBLISHED for that session is a withdrawn figure and is not the comparator: of the 2.36 points between it and today, roughly 1.05 is vendor restatement and 1.31 is market (A1.1, A1.2). The triangle still identifies the episode: the two import benchmarks sit at or beside war records while the largest producer's domestic benchmark is below where the war started. This is a routing dislocation, not a global energy shock. NO named, dated attribution for the 27 August rise in either gas benchmark could be sourced. NO Gassco or Norwegian operator outage notice dated 27–28 August. NO QatarEnergy or Qatargas statement 26–28 August, and NO new disruption to Qatari LNG exports. Standing structural drivers unchanged: EU storage at 62.99% at the end of the gas day on 24 August against a five-year average of 79%; the Ormen Lange compressor failure extended to 1 February 2027; Qatari force majeure of 4 March extended to October, with production restored to about 80% of pre-war by mid-August. Windward records NO crude, LNG or LPG moving outbound through the Strait in its 24 hours to 21:00 UTC on 26 August.

The EIA weekly for the week ending 21 August was released on 26 August and remains the newest that exists. (!) SOURCING DISCLOSED ON THE FIGURE (\$9.45): these figures are CARRIED from the last edition and were NOT independently re-verified this edition, because [ir.eia.gov/wpsr/overview.pdf](https://ir.eia.gov/wpsr/overview.pdf) again served a week-ending-5 DECEMBER 2025 balance sheet on a direct fetch. The whole EIA weekly path remains untrusted. Commercial crude 428.9 mn bbl, +0.1 mn, about 1% ABOVE the five-year average; crude imports 6.2 mb/d on a 6.6 mb/d four-week average; refinery utilisation 97.4%; distillate +2.2 mn bbl and about 14% BELOW the five-year average; gasoline -2.5 mn bbl and about 14% below, against about 5% below a fortnight ago — a shift the weekly draws do not account for; the EIA's own wording is carried on both vintages and NO delta is computed across them. The next WPSR is 2 September — PROSPECTIVE. (!) THE SPR NOW HAS TWO IRRECONCILABLE PUBLISHED VALUES AND BOTH ARE PRINTED. This monitor recorded 289.7 mn bbl, sourced to the DOE's SPR office. The DOE's own SPR Quick Facts page, last modified 24 August, publishes 'Crude Oil Inventory by Site (as of August 20, 2026)' totalling 294.1 MMB — Bryan Mound 142.5, Big Hill 89.1, Bayou Choctaw 32.0, West Hackberry 30.5, across 61 caverns. These are different series on different vintages: a by-site inventory table against a weekly inventory update. The DOE weekly 'current inventory' link resolves to a page whose entire content is a JPEG image and could not be read, and the EIA weekly SPR stocks series could not be retrieved either. NEITHER figure is withdrawn, NO delta is computed, and the conflict is the finding. NO EIA Today-in-Energy item on Hormuz, oil prices or inflation on 26 or 27 August — the only in-window item is a liquids-pipeline database piece of 26 August. NO STEO update: the STEO vintage is 11 August and the next is 9 September, PROSPECTIVE. NO IEA or OPEC publication dated 26–28 August; the IEA Oil Market Report of 12 August stands, with world supply -4.3 mb/d in 2026 and 8.3 mb/d of Gulf output shut in.

#### A1.4 · Strait operational — the full record, every provider, every denominator

| Strand                                                           | Detail                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Source and tier                                                                                                          |
|------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------|
| UKMTO / JMIC advisories — TWO NEW PRODUCTS                       | <b>JMIC Update 090 to the Advisory Note, ICOD 271500 UTC August, OBTAINED IN FULL by direct file URL and confirmed released by UKMTO's own X account on 27 August.</b> Cumulative confirmed vessel incidents since 1 March: <b>97</b> , up from 96, 'one incident since the last report'. <b>Threat levels ALL UNCHANGED</b> and every outlook section marked '(No change)': Strait of Hormuz <b>SEVERE</b> — 'deliberate hostile action considered highly likely under current conditions... including unknown-projectile strikes on both inbound and outbound transiting vessels'; Gulf of Oman <b>MODERATE</b> ; Arabian Gulf <b>MODERATE</b> ; Gulf of Aden and Bab el-Mandeb <b>SUBSTANTIAL</b> ; Northern Red Sea/Suez <b>MODERATE</b> ; Eastern Med <b>LOW</b> . Verbatim on mines, <b>BOTH</b> sentences: 'There remained a continued risk of drifting or uncharted mines in and near the TSS, with mine danger areas still active' and 'Clearance and mine-surveying operations continue throughout the Strait of Hormuz, with updated coordinates and graphics available from NAVCENT NCAGS'. Verbatim on the lanes: traffic is expected to remain reduced 'across both the northern Iranian-controlled route and the southern Omani corridor', and 'vessels transiting with AIS-on can expect to receive directed hails instructing them to divert toward the northern Iranian-controlled route'; the environment 'reflects an established post-MOU status quo'. Blockade posture: unauthorised entry or departure 'may result in interception or force', visit-and-search for neutrals, a 30 NM standoff advised, and a vetted humanitarian-cargo exemption via NAVCENT NCAGS. <b>Explicit negative inside 090: 'No new specific UKMTO, MARAD, NAVCENT, or NAVAREA IX GNSS/EMI notices were issued 25–27 August.'</b> Six merchant vessels remain held (MT HONOUR 25, MV SWARD, MT EUREKA, MT ASANA, MV LUTUF, MT SEAMULL/SIBU 1). (!) <b>EPOCH NOTE UNCHANGED: UKMTO counts from 1 March, Windward from 28 February and this document's market anchor is the 27 February close — three start dates, never differentiated</b> | JMIC Update 090, direct file URL, 28 Aug — Tier 1 primary                                                                |
| The 25 August attack, published 27 August                        | <b>UKMTO Attack 121-26. Report date 25 Aug 1730 UTC; ISSUE DATE 27 Aug; source: Local Authorities; location Khasab, Oman.</b> Verbatim: 'a tanker has been hit by an unknown projectile causing fire to the vessel which has since been extinguished. All crew are reported as safe and accounted for and there has been no report of environmental impact.' <b>JMIC 090 names the vessel AL SALAM II, a tanker transiting EASTBOUND in the Strait, 'hit just above the waterline, causing a small hole and a small fire extinguished by the crew', with the OMANI Maritime Security Centre confirming at 262350Z and NAVAREA IX 299/26 placing her anchored at 26-23.40N 056-30.50E, about 0.8 NM NW of Jazirat Tawakkul. Tug assistance expected. Trade reporting describes her as a Kuwaiti oil tanker. (!) IMO number NOT OBTAINED. NO party has claimed the attack and NO government has attributed it. (!) THE TWO-DAY PUBLICATION LAG IS ITSELF A FINDING: the corridor and revenue-sharing announcements of 26 August were made while a vessel had been struck inside the Strait with no public record of it. The interval is unexplained and is unusual for this product line.</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | UKMTO Attack 121-26 and JMIC 090, direct file URL — Tier 1                                                               |
| Transit counts — FIVE universes, never spliced (§9.24)           | (1) <b>JMIC 090 annex (S&amp;P Maritime/SeaVision, cargo-carrying above 1,000 dwt, EXCLUDING vessels calling Iranian ports adjacent to the Strait): cargo 25 Aug 0, 26 Aug 1; tankers 25 Aug 6, 26 Aug 4; combined 6 and 5. Stated historical average ~138 vessels/day on a 2025 baseline. Prose: 'single-digit numbers transiting in both directions'. NO 27 August row — the annex ends 26 August. (2) IMO NCAGS-FACILITATED transits, 25–26 Aug 48h: 37. (!) A FACILITATED SUBSET on a different population; JMIC prints the caveat itself and the two are NEVER additive. (3) Kpler via Reuters: 10 VISIBLE vessels on 26 Aug, up from 8 on 25 Aug, against Kpler's own ~15 ten-day moving average. (!) BASIS CHANGE: the last edition carried Kpler's 25 Aug figure as 5 COMMODITY vessels; the same provider now reports 8 VISIBLE vessels for the same day. Different series — NO revision, NO delta, NO trend constructed from the pair. (4) Windward publishes TWO counts for 26 Aug: 12 transits in its panel (7 inbound, 5 outbound, 4 of 12 dark) and 8 in its MIOC narrative on a stated 21:00–21:00 UTC window with three excluded reversals — five outbound and three inbound, two of them dark tankers on the northern corridor. Both are Windward's; if one is quoted it is the 8, with its window and its exclusion rule. (5) TankerMap (AIS, tankers only): 25 Aug 0, 26 Aug 1, 27 Aug 0; 7-day average 0.9/day and 7-day total 6, ~40% on the prior seven days, against its own ~21/day norm. (!) TankerMap's own 26 Aug briefing headline calls one transit 'above recent average' — a one-vessel move dressed as a trend, and that framing is NOT used. IMF PortWatch: NOT UPDATED past 3 transits on 23 Aug. LSEG: NOT OBTAINED. Lloyd's List: NOT OBTAINED since 19 Aug.</b>                                                                                                                                                                                                                                                                                                                                      | JMIC 090 §4C and annex; Reuters (Kpler named) 27 Aug; insights.windward.ai 27 Aug (data to 26 Aug); tankermap.com 27 Aug |
| Denominators in circulation (§9.19)                              | <b>UKMTO/JMIC ~138/day all transits, restated in 090 itself and the SCORED divisor · Windward ~140/day · Al Jazeera ~100/day, 'more than half of them tankers' · IMF PortWatch 85/day in its JSON and 73/day on its front page, the SAME series with TWO published numbers · TankerMap ~21 tankers/day · Kpler ~15 on a 10-day average — (!) the LABEL on that average moved with the count: the 26 Aug relay called it COMMODITY VESSELS and the 27 Aug relay simply vessels against a VISIBLE-vessel count, so the average is quoted only against the count it was published with and never across the two. (!) Nor is it to be confused with Kpler's ~15 mb/d, a VOLUME basis and the same numeral in different units. On the scored ~138/day divisor, JMIC's 6 and 5 read 4.3% and 3.6%. Al Jazeera, 27 Aug: an average of about five vessels a day from 15 July to 23 August, 'almost 95 percent' below pre-war on its OWN ~100/day baseline. No percentage-of-normal appears anywhere in this document without its divisor named</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Each provider's own published basis; Al Jazeera 27 Aug                                                                   |
| Blockade tally — UNCHANGED, and the two-source conflict persists | <b>JMIC 090, verbatim: 'Latest available CENTCOM figure (24 August), 71 commercial vessels had been redirected, three disabled, and two boarded for compliance verification.' The figure is UNCHANGED from Update 089 and is STILL dated 24 August as of 271500Z — CENTCOM has published no new tally. (!) A Tier 2 daily tracker continues to record CENTCOM's own last published figure as 70 / 3 / 2 as of 23 August, and says the accounting was not updated for a FOURTH consecutive day. Both are reported; neither is reconciled; no delta is computed across them. The published progression is 44 (3 Aug), 49 (6 Aug), 62 (14 Aug), 67 (20 Aug), 68 (21 Aug), 70 (23 Aug), 71 (24 Aug). (!) A trade headline asserting '100 ships redirected' could not be fetched, could not be dated, and returned '55' in search summarisation of the same article. IT IS REJECTED AND NOT USED.</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | JMIC 090 §2C; Tier 2 tracker; rejected item named in A7                                                                  |

| CENTCOM / kinetic                                               | NO CENTCOM release dated 27 or 28 August against the live PUBLIC-RELEASES index, read directly. The most recent release of ANY kind is 15 August (the commander's trip readout); the last COMBAT release inside Iran is 29 July — a 30-DAY GAP. (!) A Tier 2 tracker calls 27 August a third consecutive daily window in which it logged no CENTCOM operational statement; that is the tracker's own window count, NOT a count of days since 15 August, which is thirteen. 28 consecutive nights with no US or Israeli strike inside Iran; 8 with no Iranian ballistic launch; 9 with no drone launch. With the 30-day release gap these are FOUR separate clocks on four different measures and are NEVER merged or differenced. JMIC 090 records 'no confirmed attacks or disruptions' for the Arabian Gulf, Gulf of Oman, Arabian Sea, Gulf of Aden, Southern Red Sea/BAM and Northern Red Sea in its period. (!) A Tier 2 claim that no launch by ANY party occurred anywhere in theatre on 27 August is NOT CARRIED and is WITHDRAWN: three Houthi ballistic missiles struck Mocha port on 26 August and a fourth struck Khokha, Hodeidah, on 27 August (Arab News, 27 Aug; JMIC 090 §4B). Those are LAND and PORT targets in Yemen and are never counted as maritime incidents, and the four clocks above concern Iran and the United States only — but the theatre-wide negative does not survive them. (!) Against all of it, 090 also records that 'IRGC attacks, attempted attacks, and/or harassment activity persisted including UAV overflight, targeted surveillance of merchant shipping, and occasional VHF hailing'. Silence in the release index is not inactivity in the water. (!) CORRECTION TO A STANDING ITEM: there are TWO carrier strike groups in the ARABIAN SEA, not one — George Washington (CVN-73) and George H.W. Bush (CVN-77), both supporting Operation Epic Fury, with the Abraham Lincoln CSG transiting EAST out of the region. NEITHER OF THE TWO IN THE ARABIAN SEA has entered the Gulf of Oman or the Gulf; the Lincoln's position beyond 'transiting east' is NOT OBTAINED. (!) The tracker is dated 24 August and is therefore FOUR DAYS OLD; it is the newest published and the currency limitation is stated rather than absorbed. USS John Finn named in the Arabian Sea. NO Hegseth statement 27–28 August. NOT OBTAINED. | centcom.mil<br>PUBLIC-RELEASES index<br>read direct 28 Aug — Tier 1;<br>JMIC 090; USNI Fleet and<br>Marine Tracker 24 Aug — Tier 2 |
| The mine dispute — narrowed by an American document, not closed | (1) Trump, Truth Social, TUESDAY 25 August: 'All mines have been removed and/or detonated from within the International Waters of the Strait of Hormuz', with a stated Zero Tolerance policy. (2) JMIC Update 090, TWO DAYS LATER: mine danger areas still active in and near the TSS, AND clearance coordinates and graphics 'available from NAVCENT NCAGS'. (3) Deputy FM Gharibabadi, 26 August: the claim is 'only aimed at calming the markets', 'no one except Iran knows the location of these mines', and US mine-detection vessels would be 'very good targets' — NOT restated 27–28 August. (!) WHAT CHANGED AND WHAT DID NOT. The 27 August edition could only record a same-day contradiction whose ORDER was unestablished. 090 is dated two days after the presidential post and restates the mine language unamended, which removes the ordering objection. It does NOT make this a NAVCENT rebuttal: 090 is a JMIC product that REFERS readers to NAVCENT for coordinates, and NO US Navy, CENTCOM or NAVCENT text addressing the claim has issued. The right statement is that the allied operational product, carrying an American referral, is inconsistent with the American political claim — and that only a NAVCENT or CENTCOM text would close it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Truth Social via Al Jazeera 26 Aug; JMIC 090 direct; Gharibabadi via Al Jazeera 26 Aug (Tier 3 relayed by Tier 2)                  |
| Other incidents and open vessel items                           | NO new attack, seizure, mining or detention on 26, 27 or 28 August in the Strait, Gulf of Oman or Persian Gulf — JMIC 090 records exactly ONE incident since 089 and it is dated 25 August. METRO VENETIAN (Warning 120-26, 24 Aug) is now corroborated: IMO 1013391, Aframax, LIBERIA-FLAGGED and Greek-owned, struck about 9nm NE of Ash Shishah while outbound with about 704,000 bbl of jet fuel, engine room damaged, later proceeded to Fujairah under her own power; the strike fell inside an AIS-dark period running since 13 August. (!) THE 3nm-vs-9nm LOCATION DISCREPANCY BETWEEN UKMTO AND MEDIA STANDS AND IS NOT RECONCILED. (!) AMARA (IMO 9333280) IS NOW INTERNALLY CONTRADICTORY ACROSS PROVIDERS AND THE CONTRADICTION IS THE FINDING: Windward, dated 27 August on data to 26 August, still lists her as SEIZED 20 August and held stationary near Qeshm for a second consecutive day; TankerMap AIS at 05:17 on 27 August shows her UNDER WAY at 10.9 knots, Liberia-flagged, destination blank. These cannot both be current. NO party has confirmed a seizure, a detention or a release. Neither feed is preferred. Windward, 26 Aug, vessel identities partly withheld: an OFAC-sanctioned MR1 product tanker transited outbound with ~238,000 bbl of naphtha broadcasting a flag switched Madagascar to Nicaragua; an OFAC-sanctioned Mali-flagged bitumen tanker REVERSED an outbound transit at 03:19 UTC south of Qeshm; a Panama-flagged product tanker reversed approaching the northern corridor — the 13th u-turn before completing an inbound transit since 23 July. A ~4 km oil-spill trail was imaged in the southern approaches on 25 August, traced to an unidentified AIS-dark vessel of about 120m, within ~55 km of desalination infrastructure; assessed as limited and likely to dissipate. GPS jamming, Persian Gulf, 26 Aug: 176 jammed vessels, 2.7% of 6,510 transmitting, ~19.9% on the 7-day average; 393 false ship-to-ship meetings.                                                                                                                                                                                                                                                                                                                                                                                   | JMIC 090; insights.windward.ai<br>27 Aug; tankernmap.com 27 Aug<br>— providers named, not merged                                   |
| Iranian exports, Kharg and floating storage                     | NO new Kharg loading rate in kb/d for late August — NOT OBTAINED for a THIRD consecutive edition. No new Vortexa, Kpler or Windward Kharg throughput, dark-tonnage or floating-storage figure in the window. The Kpler figure via The National is the SAME 26 August article the last edition carried and is NOT a new number: Chinese imports of Iranian crude routed THROUGH THE STRAIT averaged about 530 kb/d across July AND August combined, 48% below pre-war and 72% below the October 2024 peak of ~1.9 mb/d. It is a July-plus-August blended Hormuz-routed average and is NOT the 534 kb/d August month-to-date series. China's Suez/Bab el-Mandeb workaround ran about 1.02 mb/d in August against 940 kb/d in July and a 2.62 mb/d April peak; freight on that route is \$10–11/bbl against roughly \$5 pre-Houthi, on a 25–27 day voyage versus ~50 days round the Cape. NEW, and Tier 2/3 single-stream: Kpler's weekly, via a non-trade outlet quoting a named Kpler manager, records 121 crossings for 17–23 August against 118 the prior week, of which 62 are 'route undetermined' and 56 run under the Iranian unilateral scheme — (!) 62 plus 56 is 118, not 121, and the outlet publishes no residual category, so the split is reported and NOT reconciled; sanctioned-vessel crossings rose 9 to 16 and shadow-fleet crossings were stable at 28. (!) That is a WEEKLY, BACKWARD-LOOKING series on a sixth vessel universe, it does not cover 26–27 August, and it is reported rather than used. (!) DEFINITIONAL TRAP UNCHANGED: Kpler's ~80 mn bbl is crude OUTSIDE the blockade zone, a different series from the 110 mn bbl of 18 August INSIDE the Gulf. Neither republished. NEVER print 110 → 80 as a decline. Kharg's western terminal reloaded on 12 August after 25 days idle; no update since.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Kpler via The National 26 Aug; Kpler weekly via a single non-trade outlet 27 Aug; Windward 27 Aug                                  |

### A1.5 · Retail fuel — three series, never compared

\$9.19 in its sharpest form. THREE DISTINCT SERIES: AUTMUSAG is AAA ALL-GRADES and is the SCORED reference, last RESOLVED at \$4.83 on 25 August; USRFRUSA is DOE REGULAR, surveyed Monday and published Tuesday, last at \$4.085 for the

24 August week; and AAA's own published REGULAR headline is a THIRD series at \$4.0997 on 27 August. They are never compared and no delta is ever computed across them. Read directly from AAA, page stamped 'price as of 8/27/26': regular \$4.0997 (-0.17 cents on the day); mid-grade \$4.6122; premium \$4.9939 (unchanged); DIESEL \$5.6183 (-0.47 cents); E85 \$3.1600. THE DIESEL RECORD RUN BROKE. \$5.6183 ends FOUR consecutive war highs and leaves 19.76 cents to the AAA all-time record of \$5.8159 set on 19 June 2022 — widened from 19.29. Diesel is still +7.06 cents on the week and +32.22 on the month, and +190.47 cents on the year. Regular is now BELOW both its week-ago \$4.1044 and its month-ago \$4.1097 — the first session in this window with both comparisons negative — and +89.16 cents on the year. The AAA record for regular remains \$5.0165 (14 June 2022). NO AAA print for 28 August at the cut — PROSPECTIVE, not unobtained. The EIA weekly retail series ran on 25 August for the 24 August week and next runs 1 September — PROSPECTIVE. Its 24 August week stands at on-highway diesel \$5.652 (+19.8 cents) and regular \$4.085 (+3.6 cents), with California diesel \$7.040, PADD5 \$6.407, PADD3 \$5.481 and PADD1B \$5.840. The scored AUTMUSAG series backfilled 26 August at an UNRESOLVED \$4.83, is DARK on 27 August, and its 28 August value is PROSPECTIVE. \$9.30 binds: no trend is read through dark sessions in either direction, and the 14 August precedent — a six-session decline nine cents from its downgrade condition that reversed completely on two upward backfills — is why.

### A1.6 · Freight, war risk and ports

Baltic Exchange week 35: NOT PUBLISHED at the cut. The week-35 page returns empty and the week-34 page's 'next' link is blank. It is due Friday 28 August and is therefore PROSPECTIVE, not a retrieval failure (\$9.46). Week 34, published 21 August, stands: TD3C MEG-China WS570, 88 points firmer, standard Baltic VLCC round-trip TCE close to \$585,000/day; TD34 Gulf of Oman-China WS216.67, +46 points, TCE over \$197,800/day; TD15 WAF-China WS209.13; TD20 Suezmax WS328.89; TD6 CPC/Augusta WS532, -40 points; TC1 WS536.67; TC5 WS565.63; TC17 WS507.86 on a \$56,997/day TCE. (!) METHODOLOGY BREAK RESTATED: the week-33 AGGREGATE TCE series (VLCC \$234,821/day, Suezmax \$269,824/day, Aframax \$77,182/day) has no week-34 counterpart and the route figures are NOT its continuation. No bridging figure has been published. NO VLCC TCE, TD3C or MEG-China spot assessment dated 26-28 August from any source — NOT OBTAINED. WAR RISK — EXPLICIT NEGATIVE: no named broker published a percentage-of-hull figure dated 26-28 August. (!) The '7.5% to 10% of hull value' figure recirculating in search results traces to Marcus Baker, global head of marine at Marsh, reported by S&P Global on 22 JULY, and several aggregators carry it undated. It is a RE-PUBLICATION, not a repricing. Marsh, 22 July, remains the newest named-broker point estimate. Aon, WTW, Gallagher and Lockton: nothing dated in the window. Lloyd's Joint War Committee unchanged at JWLA-034, circulated 29 July, effective 12 August; NO JWLA-035. NO IMO, INTERTANKO, BIMCO, ICS, INTERCARGO or P&I club statement on Hormuz dated 26-28 August — NOT OBTAINED. The industry 'Guidance for Safe Management of Vessel Transit through the Strait of Hormuz' of 20 May remains the standing reference and JMIC 090 continues to cite it. (!) The IMO's reported warning that an Iranian transit toll would 'set a dangerous precedent' is referenced by a 27 August commentary outlet but NO primary IMO release of that date could be found; it is NOT carried as an in-window IMO statement. Ports: NO Gulf throughput update dated 26-28 August. NOT OBTAINED. Standing context: Jebel Ali Q2 throughput 374,000 TEU, -90.1% year on year; H1 3.1 mn TEU, -59.5%; DP World spending about \$100 mn a month keeping a fully operational port ready against traffic at roughly a tenth of its prior base. Bab el-Mandeb, JMIC 090: 60 transits over the 25-26 August 48 hours against a ~61/day 2023 baseline; threat SUBSTANTIAL, unchanged; persistent GNSS interference around Yanbu with AIS-off operations the established norm at its berths.

### A2.3 · CROSS-ASSET AND MACRO RECORD — FULL

The 27 August US releases, all Tier 1 primary, all landed BEFORE the Singapore cut. Initial claims (DOL, release USDL 26-1430-NAT, embargoed 8:30am ET Thursday 27 August): initial claims for the week ending 22 August 203,000 seasonally adjusted, DOWN 4,000; the prior week REVISED UP 1,000 to 207,000; four-week moving average 205,500, up 1,250; continuing claims for the week ending 15 August 1,778,000, down 18,000, with the prior week revised DOWN 3,000; insured unemployment rate 1.2% on covered employment of 153,732,307. Year-ago comparators: 229,000 initial and 1,942,000 insured. (!) SOURCING HAZARD RECORDED: dol.gov/ui/data.pdf served the STALE 20 August release (USDL 26-1413-NAT, 206,000) on one fetch in this session and the correct 27 August release on another. The figures above are taken from a document whose face reads 'Thursday, August 27, 2026'. This is a \$9.45 failure mode on a second first-party path and it is disclosed on the figure. A labour market printing 203k initial claims with continuing claims falling is not a labour market cracking under an energy shock, and it is the condition under which a September HIKE remains the live risk.

Advance economic indicators, July (Census CB26-141, 27 August, 8:30 ET): the advance GOODS trade deficit widened \$17.4bn to \$118.8bn, a 17.2% deterioration; goods exports \$199.4bn, -2.9%; goods imports \$318.2bn, +3.7%. Advance wholesale inventories \$959.1bn, +1.3%; advance retail inventories \$838.5bn, +0.7%. The line that belongs to this war: exports of industrial supplies, which include petroleum, fell 11.2% on the month but are UP 18.4% on the year, while imports of the same category fell 3.9% on the month and 11.7% on the year. Read it carefully and do not overclaim: a monthly fall against a large annual rise is what a price-driven export series looks like when volumes are being rerouted, but the release publishes no price/volume decomposition and none is asserted here.

The 26 August cluster stands and is unrevised. July personal income and outlays (BEA 26-39): headline PCE price index +0.2% m/m and +3.7% y/y, both above a +0.1% / 3.6% consensus; core +0.2% and +3.3%, both in line; personal income +0.4%, DPI +0.5%, nominal PCE +0.2%, REAL PCE +0.0%; saving rate 3.0%. The composition is the finding: goods spending FELL \$49.9bn while services rose \$86.2bn, and the largest single POSITIVE goods contributor was gasoline and other energy goods at +\$16.4bn. Q2 GDP second estimate (BEA 26-38): real GDP unrevised at +1.5% SAAR; real final sales to private domestic purchasers revised UP 0.3pp to +4.2%; real GDI +2.2%; corporate profits +\$400.9bn after +\$74.4bn; inflation revised UP — PCE price index +5.3% (+0.2pp), core +3.6% (+0.2pp), gross domestic purchases +5.8%. (!) The release's own technical note attributes part of the downward revision to consumer goods to 'gasoline and other energy goods, based on newly available Energy Information Administration data for May' — the war arriving inside the national accounts. Durable goods, July (Census): new orders +1.1% to \$339.3bn, ex-transport +0.4%. Atlanta Fed GDPNow: 4.6% for 2026:Q3, dated 26 August, next update 1 September — PROSPECTIVE. GDPNow is a REAL nowcast and the picture it sits in is internally strained rather than nominal-heavy: 4.6% real for Q3 beside a JULY, one month and not the quarter, in which real consumer spending printed FLAT and headline inflation printed 3.7%.

The Fed path, and the Jackson Hole correction. The live risk is a September HIKE, not a cut: the 28–29 July FOMC held 3.50–3.75% on a 9–3 vote with ALL THREE dissents FOR A HIKE. The next meeting is 15–16 September with an SEP and a press conference. NO probability is ADOPTED and none is scored on: no direct CME FedWatch print is obtainable — the page renders inside a JavaScript iframe that returns no numerics to a fetcher, and two vendor endpoints returned empty. The only CME-sourced statement obtainable is a 5 August recap on 31 JULY data — four weeks stale to this window — and it is NOT used as a September probability. (!) CORRECTION TO THE LAST EDITION: the Kansas City Fed DID publish the Jackson Hole programme, at 8:00pm EDT on Thursday 27 August — exactly as that edition's own description of KC Fed practice implied. Day 1 was an opening reception and dinner hosted by Jeffrey Schmid with no papers and no published remarks. The Friday programme is Prasad on financial innovation and the international monetary system, Duffie on tokenized finance, an international payments panel with the BIS, OECD and IMF, and a Rogoff luncheon address; Saturday is Parlour, Brunnermeier and a closing panel. THERE IS NO ENERGY OR OIL-SHOCK SESSION, which confirms the last edition's inference from the theme rather than merely restating it. Warsh's first keynote as Chair is 10:00am EDT Friday 28 August, listed only as 'Opening Remarks' with no published title. It is PROSPECTIVE. NO Fed Board speech and NO Board press release is posted for 26 or 27 August on federalreserve.gov's own indices, read directly; the most recent Board speech is Cook on 5 August and the most recent press release is the discount-rate minutes of 25 August. (!) FOUR regional presidents were quoted on the symposium sidelines by trade press on 27 August with NO bank-published text behind any of them — Hammack, 'I believe now is the time to act'; Schmid, 'I don't know what we're restricting currently with the rate policy that we're at today'; Goolsbee, citing Iran-conflict energy costs and saying 'everybody should be on edge'; Collins, calling the latest print 'mixed'. These are RELAYED as journalism and are NOT treated as Fed communication or used to move anything.

Auctions and buybacks. The \$44bn 7-year note, CUSIP 91282CRJ2, auction date 27 August, issue 31 August, maturing 31 August 2033, single-price. High yield 4.512%, price 99.928654, coupon 4.500%; median 4.460%, low 4.350%; bid-to-cover 2.50; 97.63% of the competitive award allotted at the high. Competitive tendered \$110,113,656,000 against competitive accepted \$43,893,808,500; noncompetitive \$106,307,200; SOMA add-on \$5,656,451,900 outside the award, giving total award ex-SOMA of \$44,000,115,700. Allotment, BOTH denominators (\$9.40): primary dealers \$5,383,187,500 — 12.264% of competitive-accepted and 12.234% of total award ex-SOMA; directs \$11,833,130,000 — 26.959% and 26.893%; indirects \$26,677,491,000 — 60.777% and 60.631%. Tendered by class: dealers \$59.5bn, directs \$18.6bn, indirects \$32.0bn — dealers tendered the most and took the least, which is the mechanical shape of a backstop that was not needed. The five-auction coupon backstop run on competitive-accepted now reads 12.34, 2.09, 10.90, 10.05, 12.264 — (!) the newest is the SECOND-HIGHEST of the five, behind the 20-year's 12.34%, and the five span 2.09% to 12.34%. The run is intact and it is NOT tightening; no trend within it is asserted. NO TAIL IS ASSERTED: Treasury publishes no when-issued level, so a tail is unobtainable from primary data (\$9.39). Source: [api.fiscaldata.treasury.gov/auctions\\_query](https://api.fiscaldata.treasury.gov/auctions_query); the TreasuryDirect competitive-results PDF (R\_20260827\_3.pdf) returned an empty body, as the endpoint reliably does. The \$28bn 2-year FRN's 33.08% dealer take is structurally higher on floating-rate paper and is NEVER spliced into this series. BUYBACKS: NO operation and NO announcement on 26 or 27 August — the last was the 25 August 5Y–7Y liquidity-support operation, which settled 26 August, and the next is 3 September. (!) THE DOCUMENT DISCREPANCY STANDS AND WAS RE-CHECKED: the Q3 tentative buyback schedule PDF still bears its 'For Publication August 5, 2026' header and still shows a \$2bn maximum against the 10 September 10Y–20Y operation, despite press release sb0607 of 19 August raising the long-end maximum to at least \$4bn from 9 September. The same \$2bn also still appears against 24 September, 1, 15 and 27 October and 4 November. The schedule has NOT been reissued.

Iran's domestic transmission — Tier 2 and Tier 3, recorded as context and deliberately NOT used to move a probability. The fuel position was described in terms of impossibility by two vice-presidents, in public and on the record: Executive Vice President Mohammad Jafar Ghaempanah — 'continuing on this path is impossible', with domestic gasoline production insufficient and the US naval blockade preventing imports; First Vice President Mohammadreza Aref — importing substandard gasoline is not a sustainable solution. Consumption runs about 135 mn litres a day against roughly 121 mn of refinery and petrochemical output; queues blocked streets in Tehran and Mashhad on 25 and 26 August; a price rise and a rationing scheme are signalled within weeks against a subsidised structure whose lowest tier is 15,000 rials a litre. A single-stream opposition outlet reports strategic reserve drawdown at a level officials describe as red alert with stocks possibly exhausted within weeks — Tier 3, single-stream, reported and NOT relied on. The rial is around 2.02 mn to the dollar on the open market against an official ~1.5 mn, with Statistical Centre inflation near 90%. (!) PETROL PRICING IS THE PRECISE TRIGGER OF THE NOVEMBER 2019 PROTESTS. This is a live domestic-instability channel; it is recorded here and is NOT used to move the regional-relapse or full-war lines, because the load-bearing part of it is single-stream. Separately: the Hormuz transit-fee article is NOT ENACTED — the National Security and Foreign Policy Committee approved Article 3 (fees for navigation and environmental services, fuel supply, insurance and security), and the proposal still requires a full-parliament vote and Guardian Council review. NO plenary vote 26–28 August. (!) NOTE THE NAME COLLISION: the committee spokesman is EBRAHIM Rezaei and is a different person from SNSC Secretary MOHSEN Rezaei. Khamenei has been SILENT for a sixth consecutive day — an explicit negative, and the most consequential one in the domestic file, because it leaves unresolved which institution is executing settled policy. Pezeshkian spoke at the Islamic Unity Conference in Tehran on 27 August: Iran is 'not in a weak position', and 'no Muslim country's territory should be used against another Muslim nation'. Araghchi wrote to the UN Secretary-General on 26 August calling the US measures 'an act of state and economic terrorism' — the first Iranian attempt to contest the campaign in a multilateral rather than bilateral forum. NO new IAEA statement on Iran; the standing position is no verification activities since 28 February and access denied to 20 declared sites. AEOL head Eslami, 26 August, said the Agency's failure to condemn the strikes 'calls its competence and independence into question'.

Sanctions and the Gulf. NO OFAC Iran action on 27 or 28 August, verified against [ofac.treasury.gov](https://ofac.treasury.gov) Recent Actions read live: the 27 August action is amended VENEZUELA general licences, the 26 August action is counter-terrorism and Russia, and the last Iran action is 24 August. NO Treasury Iran press release on 27 or 28 August; the most recent is the 26 August action against far-left terrorist networks. Bessent's threatened financial-institution designation, signalled 'before the end of the week', HAS NOT ISSUED — a third consecutive day. NO Chinese bank is designated: the 24 August package swept up dozens of Chinese and Hong Kong businesses, a tanker and a Hong Kong shipper, but deliberately avoided institutions with US financial-system exposure, with the September Xi state visit reported as the constraint. The operative notice remains the five E.O. 13902 sector determinations effective 24 August with wind-down to 8 September; no amendment, FAQ or general licence touched them in the window. China has invoked its 2021

blocking regulations for the first time, ordering domestic companies to disregard US designations of five refiners; NO new Chinese statement 27–28 August. THE UAE EMBARGO IS NINE DAYS OLD AND STILL HAS NO PUBLISHED LEGAL CONTENT: no implementing decree, no guidance on cargo in transit, no treatment of existing contracts or wind-down, no humanitarian carve-out, no remittance treatment, no stated enforcement commencement date and no CBUAE circular. (!) The measure rests on the UAE MoD's attribution to Iran of two ballistic missiles detected on 18 August, which Tehran denies and has not withdrawn the denial of, and NO US or CENTCOM statement corroborating the Emirati assessment had been published as of 27 August — a tenth day.

## A8 · ON-DEMAND UPDATE PROTOCOL

| # | Step                             | Detail                                                                                                                                                                                                                                                                                |
|---|----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1 | Refresh and verify the extract   | <b>Never build an edition off a stale extract (\$9.22).</b> Check the file mtime AND parse the sheet — a stale mtime and a stale row are different failures. <b>This edition: the extract carries a 28 August row against the 27 August row the last edition ran on. It is fresh.</b> |
| 2 | Parse with a dynamic header scan | Column indices move between uploads. Auto-detect the Brent and WTI front month and take whatever label the header scan returns for DXY. <b>Re-verify the 27 February anchor field by field — done this edition, unchanged on all sixteen fields.</b>                                  |

| # | Step                                              | Detail                                                                                                                                                                                                                                                                                                                           |
|---|---------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3 | Run all THREE integrity checks                    | Row-level (§9.8), field-level identical-to-4dp (§9.35), and the continuation-versus-active BASIS check (§9.41). This edition: row and basis CLEAR; the field-level check FIRES on AUTMUSAG; SOFR backfilled; and Henry Hub and TTF were RESTATED across three sessions.                                                          |
| 4 | Compute deltas and test every trigger             | d/d, w/w five rows back, and versus pre-war; explicit trigger tests for the four market channels plus Stage-4 A, B and C. Run min, max and last-prior-occurrence on the full column before writing ANY superlative (§9.32) — it is what kept the TTF and MOVE claims in this edition honest.                                     |
| 5 | Verify the news, and re-verify what was inherited | Every claim needs a named source and an exact date, and negative claims decay fastest of all (§9.23) — this edition cut back an inherited claim about Qatar on exactly that ground. State the exact query behind every negative. Say NOT OBTAINED rather than estimating, and distinguish NOT OBTAINED from PROSPECTIVE (§9.46). |
| 6 | Build, then QA in three passes                    | A numeric harness against the dataframe; an adversarial PROSE pass by a reviewer with no access to the source data, run TWICE because fixing introduces defects (§9.42); and a VISUAL render, which is not optional (§9.43). Re-run the numeric harness AFTER the prose fixes.                                                   |
| 7 | Deliver both documents                            | The edition and the annex go into the project root together. A file that is not committed never reaches the reader. The annex does not go into the dashboard PDF folder, because the score-history script regexes a score sentence out of every PDF there and the annex has none.                                                |

## A9 · METHODOLOGY

Six channels, each scored 0–5, summed to 0–30. Bands: 0–7 watch; 8–14 stress; 15–21 systemic-risk watch; 22–30 crisis. Maritime denial and escalation risk are event channels; oil, US inflation impulse, Treasury stress and political stress are market channels scored on confirmed closes.

**(a) Confirmed closes only for market channels.** No market channel moves on an intraday print. The 28 August snapshot in this document moves nothing. **(b) Hysteresis.** Upgrades fire on a sustained break; downgrades require a sustained reversal past a wider threshold. It was vindicated again: the 5y5y forward broke below its own firing trigger on 25 August and has now closed ABOVE it on two consecutive sessions. It is the second single-close break of that level to be reversed on the very next close, after 13–14 August. Had the channel moved on the 25 August close it would have been wrong within a day, for the second time in a fortnight. **(c) The scale saturates in BOTH directions (§9.7, §9.27).** FIVE of six channels are at the cap, so deterioration cannot raise this score through any of them — the sole remaining route up is the oil channel at 2 — and no amount of financial improvement short of a documented downgrade can lower it. **A flat 27 does not mean a stable situation and this document says so every time it prints one.**

Rules exercised this edition, named so the reader can audit them. §9.8, §9.35 and §9.41 — all three integrity checks run, and unlike the last two editions they did not all clear: the field-level check fired on the scored gasoline series and the extract carried a three-session restatement of the gas complex. §9.10 — the two-way backfill test caught SOFR repairing a 26 August blank. §9.11 — an announcement is not an event; the escalation channel holds although a mediator visited Tehran. §9.15 — stated in full BECAUSE IT DOES NOT APPLY THIS SESSION: WHERE A CHANNEL HAS TWO DOWNGRADE LEGS, IT IS ONLY NEARING A DOWNGRADE WHEN BOTH LEGS MOVE TOWARD IT IN THE SAME SESSION; LEGS THAT MOVE IN OPPOSITE DIRECTIONS ARE ROTATING, AND ROTATION IS NOT APPROACH. On 27 August the Treasury legs did neither: both moved AWAY. A joint deterioration is a third state and it is named rather than forced into the rule. §9.19 and §9.40 — every denominator named, on five transit universes and on both auction bases. §9.23 — an inherited, load-bearing NEGATIVE claim about Qatar was re-tested and cut back rather than repeated. §9.24 — five providers, five universes, all published, none spliced, and a provider's own basis change flagged rather than turned into a revision. §9.30 — the scored gasoline series is unresolved then dark and no trend is read through it. §9.31 — the snapshot missed the whole US session in one direction and four readings are withdrawn BY NAME in A1.2. §9.32 — every superlative bounded: the TTF intraday was NOT written as a record close and the 27 August close was written as second-highest, MOVE was written as fourth-lowest of a phase rather than a low, and the Threshold B miss was written as the narrowest 30-YEAR-leg miss rather than the narrowest miss. §9.36 and §9.41 — both oil bases quoted, basis check run and cleared. §9.39 — Threshold A reported as untestable as written, with no tail asserted. §9.43 — a visual render was run before delivery. §9.46 — Baltic week 35, VRA Overview No. 4, UKMTO 091, the 28 August AAA print and Warsh's keynote are PROSPECTIVE and are kept out of the NOT OBTAINED register.

§9.45 EXTENDED BY A SECOND LIVE FAILURE, AND A NEW CLASS OF FAILURE RECORDED. First, the standing case: [ir.eia.gov/wpsr/overview.pdf](https://ir.eia.gov/wpsr/overview.pdf) again served a week-ending-5-December-2025 balance sheet, so the 21 August EIA weekly figures in this document are CARRIED and explicitly NOT re-verified, and that is disclosed on the figures rather than in a footnote. Second, and new: [dol.gov/ui/data.pdf](https://dol.gov/ui/data.pdf) served the STALE 20 August claims release on one fetch in this session and the correct 27 August release on another — the same failure mode on a DIFFERENT first-party path, and the defence against it is to read the release number and embargo date off the face of the document every time rather than trusting the URL. Third, a failure that is not staleness at all: the DOE's weekly SPR 'current inventory' page is served as a JPEG IMAGE, so the weekly series is unreadable by any fetch, while the DOE's own Quick Facts page publishes a DIFFERENT total on a DIFFERENT basis. THE CORRECT HANDLING IS TO PUBLISH BOTH FIGURES WITH THEIR SERIES AND VINTAGES NAMED, WITHDRAW NEITHER, AND COMPUTE NO DELTA — the same discipline §9.24 imposes on transit counts, applied to a government's own inventory.

**Restatements and comparability.** Vendor restatements are normal and make absolute levels non-comparable across editions, though directional analysis is continuous. A restatement DID occur this edition, confined to Henry Hub and TTF across 24–26 August, and it moved a war-record level and a headline percentage without the market moving — so gas levels are not comparable with prior editions and the affected reconciliation gaps are excluded rather than published (A1.1, A1.2). A contract roll does the same thing to a continuation series silently, which is why the basis check is a standing check. The dual gasoline series is never re-based: AUTMUSAG is the scored reference and preserves the \$3.52 anchor and the \$4.75 trigger; USFRUSA is corroboration only. The pre-war anchor is the 27 February 2026 close, re-verified field by field every edition; it is unchanged to date. ONE OPEN ITEM REMAINS DISCLOSED RATHER THAN DECIDED: the oil channel's downgrade is written as a mediated pause AND 'a close' at or below \$72.48, while its upgrade requires a SUSTAINED break — as written, the downgrade is easier to trip than the upgrade, which inverts (b). The condition is \$16.04 away and is not live, so the asymmetry is disclosed rather than settled under time pressure.

## A10 · ANCHOR AND TRIGGER LEVELS

## A10.1 · Pre-war anchor — 27 February 2026 close, re-verified this edition, unchanged

| Brent   | WTI     | 2Y       | 5Y       | 10Y      | 30Y      | 2s10s     | 5y5y    | 10y BE   | MOV E | VIX   | DXY    | Gasoline AAA | Gasoline DOE | Henry Hub | TTF    | Asia LNG |
|---------|---------|----------|----------|----------|----------|-----------|---------|----------|-------|-------|--------|--------------|--------------|-----------|--------|----------|
| \$72.48 | \$67.02 | 3.3749 % | 3.5017 % | 3.9375 % | 4.6106 % | +55.64 bp | 2.142 % | 2.2569 % | 73.38 | 19.86 | 97.608 | \$3.52       | ~\$2.94      | \$3.063   | €31.23 | ¥1,669   |

## A10.2 · Live trigger state on the 27 August close

| Channel              | Score | Upgrade                                                                          | Downgrade                                                                                                | Distance                                                                                                                                                                                                                                                                                                                                                                                                                               |
|----------------------|-------|----------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Maritime denial      | 5     | At max                                                                           | Verified reopening AND traffic above 25% of the UKMTO/JMIC ~138/day all-transit baseline for 10 sessions | Neither leg is close. JMIC 090's own annex counts 6 vessels on 25 Aug and 5 on 26 Aug — 4.3% and 3.6% of the scored divisor. The 37 US NCAGS-FACILITATED transits over the same 48h are a subset on a different population and are never added. An ANNOUNCED corridor is not a verified reopening, and 090 records vessels being hailed and DIRECTED onto the Iranian route                                                            |
| Oil price shock      | 2     | Brent above \$95 sustained → 3                                                   | Mediated pause AND a close at or below \$72.48 → 1                                                       | Upgrade \$6.48 on CO2 and \$5.30 on the active — NARROWED from \$8.06 / \$7.16 after two consecutive widenings. Downgrade price leg \$16.04, WIDENED by \$1.58                                                                                                                                                                                                                                                                         |
| US inflation impulse | 5     | At max                                                                           | 5y5y sustained at or below the 2.142% anchor → 4                                                         | 17.62 bp, WIDENED from 16.12 — and STILL the nearest market downgrade candidate, as it was at 16.12 against Treasury's 16.71 a session ago. 5y5y is 1.82 bp above the 2.30% firing level on a SECOND consecutive close                                                                                                                                                                                                                 |
| Treasury stress      | 5     | At max                                                                           | 30-year close below 5.00% WITH MOVE below 75, sustained → 4                                              | Yield leg fails by 19.31 bp, WIDENED from 16.71; volatility leg satisfied for an EIGHTH consecutive close at 69.86 but by 5.14 points instead of 5.56. BOTH LEGS MOVED AWAY — not a rotation                                                                                                                                                                                                                                           |
| Political stress     | 5     | At max                                                                           | Three consecutive AUTMUSAG closes at or below \$4.60 with no intervening print above \$4.70 → 4          | 23 cents, unchanged. Last RESOLVED print \$4.83 (25 Aug); the 26 Aug cell backfilled IDENTICAL and is UNRESOLVED (\$9.35); DARK on 27 Aug and PROSPECTIVE on 28 Aug (\$9.30, \$9.46)                                                                                                                                                                                                                                                   |
| Escalation risk      | 5     | At max                                                                           | Mediated stand-down AND talks resume → 4–3                                                               | The stand-down leg is the closest recorded — a 30-day CENTCOM combat-release silence, 28 nights with no strike inside Iran, and no confirmed attack on shipping in any of JMIC's six other named regions — but the talks leg is now denied ON THE RECORD by the White House, and a tanker was struck INSIDE the Strait on 25 Aug                                                                                                       |
| Stage-4 A            | —     | Failed-auction test: an auction clearing with a tail above its when-issued level | —                                                                                                        | NOT ARMED — UNTESTABLE AS WRITTEN (\$9.39). Treasury publishes no when-issued level. The 7-year cleared 4.512% on a 2.50 cover with dealers at 12.264% of competitive-accepted — a FIFTH consecutive backstop in single or low double digits and the SECOND-HIGHEST of the five, behind the 20-year's 12.34%; directs 26.959%                                                                                                          |
| Stage-4 B            | —     | 30-year above 5.20% AND 10-year above 4.65%                                      | —                                                                                                        | STILL LAPSED on a THIRD close. 10-year SATISFIED at 4.6762%, clearing by 2.62 bp; 30-year short by 0.69 bp — the narrowest 30-YEAR-leg miss recorded ON A CLOSE, with the 28 Aug intraday nearer still at 0.59 (the narrowest miss of ANY leg on a close remains 0.35 bp on the 10-year, 26 Aug). FIFTH lapse; TENTH state and NINTH change since 29 July, both UNCHANGED because no state changed. A re-arm would be the SIXTH arming |
| Stage-4 C            | —     | MOVE above 130                                                                   | —                                                                                                        | 69.86 — 60.14 points below. NOT the furthest of the war (war low 65.39, 18 June) and only the FOURTH-lowest close of the sub-75 phase begun 12 August, behind 69.23 (13 Aug), 69.44 (26 Aug) and 69.58 (14 Aug)                                                                                                                                                                                                                        |
