

ANNEX · 31 AUGUST 2026

This annex is the companion to the 31 August 2026 edition and is built every day. The edition is capped at eight pages; material is RELOCATED here, never deleted. Section numbering tracks the edition: A1 carries the full commentary for the live-tape tables and the gasoline chart, the full strait-operational record and the freight and war-risk record; A2.3 the full cross-asset and macro record; A7 the source log; A8 the on-demand update protocol; A9 the methodology; A10 the anchor and trigger levels. A figure marked NOT OBTAINED — or, equivalently, NOT FOUND — was sought and missed, and is absent from the record rather than unchanged. A figure marked PROSPECTIVE relates to a session or publication that had not occurred at the Singapore cut and is not a retrieval failure (§9.46).

A1 · LIVE TAPE — FULL COMMENTARY

A1.1 · Data integrity — the row and field checks CLEAR, and the BASIS check fires TWICE

§9.8, the ROW-level check: CLEARS decisively. The 28 August row is a genuine close, not a stale snapshot. Not one of the scored fields that printed on it is identical to its 27 August value, and the row additionally carries MOVE at 70.97 and VIX at 14.43, both of which were blank on the 28 August snapshot the last edition ran on. §9.35, the FIELD-level identical-to-4dp check: CLEARS — but read the qualification. Every field that printed moved. The check was run at the precision each series is published to, per the standing fix in §9.48 — four decimals on the yields and the forward, three on Henry Hub and TTF, two on Brent, WTI, MOVE, VIX and the retail series. AUTMUSAG, which fired the check last edition, is simply DARK on 28 and 31 August; a blank is not an identical value and is handled under §9.30, not §9.35. (!) THE QUALIFICATION, AND IT IS THIS EDITION'S LESSON: §9.35 is a DAY-ON-DAY test. It compares a field with its own previous value, so it is structurally incapable of seeing a restatement that moves a whole COLUMN across twenty sessions at once — every day-on-day step stays internally consistent while every LEVEL is wrong. That blind spot is exactly what the basis check caught below, and a CLEARS on §9.35 must never again be read as an all-clear on the data.

§9.41, the BASIS check: FIRES TWICE, and it is the most consequential integrity finding in several editions. FAULT ONE — A RESTATEMENT OF AN ENTIRE COLUMN. The Brent ACTIVE-contract series (COA) now reads IDENTICAL to the front-month listed continuation (CO2) on EVERY session from 3 to 28 August — twenty consecutive sessions of a zero basis. That is not what the extract carried when those editions were written: this document published COA at \$93.78 for 20 August, \$87.84 for 26 August, \$89.70 for 27 August and \$89.18 for the 28 August intraday — none of which is reproducible from the current file. Every other field on those dates is UNRESTATE — the 27 August close reconciles field by field on every scored series EXCEPT COA, and the 21 August 30-year still reads 5.2709 — so this is an isolated, single-column restatement, and all FOUR prices are WITHDRAWN rather than carried (A1.2). (!) Two consequences follow immediately, under §9.47. The active-contract distances to the \$95 oil trigger published in the four editions since 20 August — \$1.22 (20 Aug), \$7.16 (26 Aug), \$5.30 (27 Aug) and \$5.82 (28 Aug) — are withdrawn with them. And every superlative that touched the active series is re-checked: the 'COA \$93.78, highest since 23 July' of the 21 August edition has no support in the current extract and is not repeated.

FAULT TWO — A CONTRACT ROLL, ON THE VERY NEXT ROW. Having been identical for twenty sessions, CO2 and COA diverged by \$2.17 on 31 August: CO2 at \$87.78 against COA at \$89.95, with the two OPENS \$2.45 apart on the same morning. This is a roll, not a market move. ICE Brent's rule is that trading in a contract ceases on the last business day of the second month preceding delivery, which makes 31 August the last trading day of the October contract; Bloomberg's 31 August oil wrap has 'Brent for November' above \$90, consistent with COA having rolled to November while CO2 still carries the expiring October. (!) The contract identification is INFERRED from the exchange rule plus a wire ticker label. No ICE settlement notice confirming both prices was obtained, and it is labelled as inference, not as a sourced fact. §9.36 governs the consequences: the scored rule is written on CO2 and stays on CO2; both bases are quoted; and from 31 August forward the two are DIFFERENT DELIVERY MONTHS, so no day-on-day change may be constructed across the roll on the active series. The WTI basis, by contrast, is clean — 1.38, 1.56, 1.57 and 1.68 across the four sessions shown, no sign change and no step. WTI rolled on 21 August and Brent has rolled on 31 August; the checks caught both, and the CL basis has been stable and non-zero since its own roll, which is what a correctly-rolled continuation looks like.

A1.2 · Reconciliation of the 28 August snapshot — the largest FRONT-END miss on record, and four readings withdrawn by name

The Singapore-morning cut of 28 August preceded the entire US session, and that session contained Warsh's keynote — so the miss is concentrated at the front of the curve and near-zero on crude, the opposite shape to the usual (§9.1, §9.12). The +11.96 bp 2-year gap was checked against every prior published reconciliation and is the largest FRONT-END gap on this document's record: a column result, not an inference from the timing of the cut.

Field	Published 28 Aug snapshot	28 Aug settled close	Gap
Brent CO2	88.13	88.10	–\$0.03 — effectively nil, the quietest crude reconciliation of the war
Brent COA (active)	89.18	EXCLUDED	(!) EXCLUDED BY NAME under §9.37 and §9.47. The close has been RESTATED to 88.10, so a gap would mix a timing miss with a restatement and measure neither
WTI CL2 / CLA	81.54 / 83.07	81.83 / 83.40	+\$0.29 / +\$0.33
Henry Hub / TTF	2.908 / 68.620	2.888 / 66.979	–\$0.020 / –€1.641 — the gas complex was NOT restated this edition, so both gaps are measured and published
DXY	99.119	99.702	+0.583 — the dollar leg of the same repricing
2-year	4.2238	4.3434	+11.96 bp — THE LARGEST FRONT-END RECONCILIATION GAP THE MONITOR HAS RECORDED
5-year / 10-year	4.3891 / 4.6703	4.4789 / 4.7180	+8.98 / +4.77 bp
30-year	5.1941	5.2056	+1.15 bp — and this 1.15 bp is what re-armed Threshold B

Field	Published 28 Aug snapshot	28 Aug settled close	Gap
2s10s	44.448	37.049	–7.399 — the snapshot showed a STEEPENING and the close was the second-largest flattening of the war
10y BE / 5y5y	2.3320 / 2.3166	2.3179 / 2.2964	–1.41 / –2.02 bp — the snapshot missed the break BELOW 2.30%

FOUR READINGS FROM THE 28 AUGUST EDITION ARE WITHDRAWN BY NAME (\$9.20, \$9.31). (a) ‘10-year SATISFIES Threshold B’s 4.65% leg by 2.03 bp [on the intraday]’ and the accompanying framing that **ONLY** the 10-year leg was live — the close cleared by 6.80 bp and the 30-year cleared too, so B RE-ARMED and the edition’s picture of a one-legged threshold is superseded. (b) ‘30-year fails B by 0.59 bp on the intraday’ — it settled **CLEARING** by 0.56. (c) The four active-contract Brent prices and the four active-basis trigger distances, withdrawn as restated rather than as missed (A1.1) — this is the one withdrawal the Singapore cut did NOT cause. (d) ‘The oil gap **NARROWED** to \$6.48’ survives as a statement about 27 August but is no longer the current reading: it widened to \$6.90 on the close. (!) A fifth item is NOT withdrawn and the distinction matters: the 28 August edition’s statement that the 27 August session was a **BELLY-LED** bear selloff was correct for 27 August. The 28 August session was a **FRONT-END**-led bear flattener. Those are two different sessions and two different signatures, and the earlier one is not retracted merely because the later one differs.

A1.3 · Energy, gas and the physical record — full commentary

Crude. Brent CO2 closed \$88.10 on 28 August, down 42 cents, having fallen 4.93% across the week from \$92.67 on 21 August — the trade press reports ‘more than 5%’ on its own differently-timed series and the difference is not reconciled — a move attributed to the Iran–Oman corridor announcements of 25–26 August. **The 30 August Larak strike reversed it: Bloomberg’s 31 August wrap has Brent for November back above \$90 and names the strike as the cause.** The pattern has now held on both sides inside a single window, though two observations are not a regularity: the price falls on **ANNOUNCEMENTS** about the waterway and rises on **INTERDICTIONS** in it. It is pricing transit risk, not barrels. The week’s range of Monday-to-Friday closes on the scored series was \$86.94 to \$90.54. **The \$95 upgrade is \$6.90 away on CO2 and the sequence of nine readings — 9.78, 8.43, 5.55, 5.21, 3.03, 7.73, 8.06, 6.48, 6.90 — has now widened three times.**

Gas, and the triangle that identifies the shock. Henry Hub closed \$2.888, which is 5.71% **BELOW** its \$3.063 pre-war anchor. TTF closed €66.979, +114.5% against €31.227. Asia LNG closed ¥3,785, +126.8% against ¥1,669 and the **SECOND**-highest close of the war behind the ¥3,793 of 25 August. The largest producer’s domestic benchmark is cheaper than when the war started while both import benchmarks sit beside war records. That is a **ROUTING** dislocation, not a global energy shortage, and it is the control in the experiment. (!) The TTF intraday of €68.990 on 31 August is **ABOVE** the €68.457 war-record **CLOSE** of 24 August. It is NOT written as a record and is NOT treated as one (\$9.31, \$9.32) — the record close stands at €68.457 until a close exceeds it. No outlet quoting a TTF print dated 31 August was obtainable; the figure is this document’s own series and the only sourced explanation available for a Monday spike is the 30 August strike. Context that is dated and sourced: EU storage is about **63% full**, the lowest seasonal level since 2009, against a European Commission target of 80%, and CNBC reported on 27 August that European prices could exceed €100 this winter. Asia LNG did not print on 31 August and is NOT carried forward (\$9.2).

A1.4 · Strait operational — the full record, every provider, every denominator

Provider / universe	Reading	Denominator, and what it is NOT
UKMTO VRA Overview No. 4 — AIS PLUS DARK derived	101 full transits outbound and 103 inbound, seven days to 27 Aug. 370 / 384 over 30 days. 1,270 / 1,010 since 28 Feb — outbound trails inbound over both short windows but LEADS by 26% over the full period, which the report does not explain and this document does not reconcile	UKMTO’s OWN stated pre-conflict average, of which these are 22% and 23%. (!) The absolute pre-conflict number is NOT printed on the page obtained, so the percentages must NOT be restated against any other baseline. A ‘full transit’ is an IMO-numbered vessel completing Arabian Gulf to Gulf of Oman within a defined 24-hour period
UKMTO VRA Overview No. 4 — AIS ONLY	‘Approximately 90% below pre-conflict baselines’ and declining since the 24–26 June peak. Route split: outbound 20 Northern PGSA / 10 Southern Oman TTW / 0 TSS; inbound 17 / 12 / 0	(!) THE SAME DOCUMENT, A DIFFERENT UNIVERSE. About 10% of normal against 22–23% on the other basis. They are NOT averaged and NOT reconciled here; the difference is the dark fleet, and it implies MORE THAN HALF of Strait throughput is invisible to the transponder record
Lloyd’s List Intelligence	114 transits 17–23 Aug, up more than 30% on 10–16 Aug; at least 42 westbound against 29; Iranian-linked transits +18.5% w/w	Its own vessel universe and its own dark-transit confirmation lag — Lloyd’s states the numbers will move as more dark transits are confirmed. NOT comparable with the UKMTO 204 for a different seven-day window
Kpler via Reuters	7 commodity vessels on 27 Aug, down from 17 the day before	Its own 10-day moving average of about 15 VISIBLE commodity vessels. Reuters carries the standing caveat that transponders may be off. (!) The 7 and the 17 are BOTH from this reading and are comparable with each other; NEITHER is comparable with the ‘visible vessels’ count carried for 25–26 Aug, which is a different Kpler series
Al Jazeera aggregate	About five vessels a day, 15 July to 23 August, ‘almost 95 percent’ below	Its OWN stated pre-war baseline of about 100 ships a day. Also: Gulf crude exports down about 47%, ~17 mb/d to ~9 mb/d; Kpler direct crude via the Strait averaging 2.2 mb/d
CENTCOM blockade tally	82 vessels redirected / 3 disabled / 2 boarded, as of 28 Aug	From 71 on 24 Aug and 68 on 21 Aug — internally consistent as a series. (!) A trade figure of ‘83 redirected’ could not be dated or sourced and is REJECTED
NOT OBTAINED this window	Windward TRANSIT COUNTS; IMF PortWatch, TankerMap and LSEG entirely	Sought and missed, not unchanged. Windward’s 19 August AMARA analysis WAS obtained and is used below; only its transit counts for this window are absent. A search summary offering Windward figures for the window was internally date-inconsistent and is NOT published

Incidents and the mine question. VRA Overview No. 4 records **36 total incidents during Strait transit since 28 February** and **23 UKMTO-reported projectile-strike incidents since 6 July**, of which **SIXTEEN** occurred on a **SEPARATELY** stated population of

EIGHTEEN — the report publishes 23 and 18 without reconciling them and neither is derived from the other here; the Southern Omani route is the one the document names the highest-risk corridor; engine rooms are the primary damage location at 14 incidents. **Threat levels: Hormuz SEVERE; Gulf of Oman, Gulf of Aden and Bab el-Mandeb SUBSTANTIAL** — ‘no change’. IMO traffic separation arrangements **REMAIN SUSPENDED**, ‘with no indication of an imminent return to normal routing procedures’, and **ZERO** of the 59 route-identified transits used the TSS. New incident: UKMTO Warning 122-26 — a crude tanker struck by an unknown projectile at 2035 UTC on 29 August, inbound, about 12 nm NORTH of Khasab; issued 30 August; vessel identity, flag and attribution **NOT** stated. (!) Obtained via Tier 2 relay only. No cumulative incident count past the 97 of JMIC 090 was obtainable, and no JMIC Update 091 could be retrieved — but ukmt0.org’s product listings are JavaScript-rendered and returned **NO** data to direct fetch, so this is **NOT OBTAINED** and is expressly not evidence that 091 does not exist (\$9.23c). On mines the record now contains three things and they are printed together: Adm. Cooper on 28 August that internationally recognised transit routes are free of Iranian sea mines; Bloomberg the same day that allies privately assess 80–150 mines may remain, which US officials call outdated; and CENTCOM’s own 30 August justification that IRGC forces were observed preparing to launch rockets carrying sea mines into the Strait. The clearance claim and the re-seeding claim are both American and both on the record. AMARA (IMO 9333280) is carried as **SEIZED**, status unknown since 19 August, on Windward’s time-stamped AIS reconstruction; the contrary ‘under way’ reading could not be corroborated by any reachable source and is **NOT** published this edition — a change from the 28 August edition, which reported the contradiction as live.

A1.5 · Retail fuel — three series, never compared

Series	Reading	Status
AUTMUSAG — AAA all-grades, the SCORED series	\$4.82, 27 August	DARK on 28 and 31 August. 22 cents above the \$4.60 downgrade condition, 7 cents above the \$4.75 that fired the upgrade. \$9.30: no trend is read through dark sessions in EITHER direction
AAA published headline, read direct 31 Aug	Page stamped ‘price as of 8/30/26’: regular \$4.0787, mid \$4.5787, premium \$4.9638, DIESEL \$5.6035, E85 \$3.1245	Regular is below its week-ago \$4.0986 AND its month-ago \$4.0981; diesel below its week-ago \$5.6074. The diesel war-high run stays BROKEN , 21.24 cents below the \$5.8159 record of 19 June 2022. But diesel is +26.4c on the month against regular’s –1.94c, and +\$1.90 y/y against +88.7c
USFRUSA — DOE regular, weekly, corroboration only	\$4.085 for the week surveyed 24 August	EIA’s own table has regular 4.006 → 4.049 → 4.085 and on-highway diesel 5.257 → 5.454 → 5.652 across 10, 17 and 24 August — diesel +19.8c in the last week. (!) A LAGGING Monday survey: AAA’s daily series had already rolled over by 30 August, so the 1 September EIA print is expected to show it. That expectation is PROSPECTIVE and is not scored

A1.6 · Freight, war risk and ports

Baltic Exchange week 35, dated 28 August — a standing watchlist item, **RESOLVED**, and it moved hard the wrong way. TD3C (270,000 mt Middle East Gulf to China) is assessed by the Baltic as 54 points stronger on the week at WS623, a daily round-trip TCE of just over \$647,000 for the standard Baltic VLCC. (!) This document carried WS570 for week 34, which is a 53-point difference against the Baltic’s stated 54; the gap is one point, is printed rather than reconciled, and the Baltic’s own figure is the one quoted. Week 34’s TCE was about \$585,000. TD34 (Gulf of Oman to China) rose almost 6 points to WS232.5, a round-trip TCE over \$219,400/day. Every NON-MEG route shown softened over the same week — Atlantic, Mediterranean and the Americas alike: TD15 West Africa–China –17 points, TD20 Nigeria–UKC –86, TD6 CPC–Augusta –135, TD26 ECMex–USG –182, TD9 Covenas–USG –163. On the clean side the MEG-loading routes also firmed — TC1 to WS540, TC5 to WS579.38, TC17 to WS525.00 — while TC2 ARA–USAC printed a **NEGATIVE** TCE of –\$4,225/day. (!) This corroboration cuts directly against the transit-count improvement: the freight market repriced **CHOKEPOINT** risk upward in the same week UKMTO published its highest throughput reading. Tonnage availability, ballast positioning and cargo mix can all move a freight assessment, but the cleanest reading of a rising transit count **ALONGSIDE** a rising Gulf-loading freight premium are that more cargo is moving through a corridor that is not getting safer — which is precisely what Lloyd’s List’s editor-in-chief described on 27 August as a market that ‘has found a way to keep cargo flowing but has done so by concentrating that risk’.

WAR RISK — AN EXPLICIT **NEGATIVE**, AND AN INHERITED FIGURE CORRECTED TO ITS TRUE DATE. No named broker published a percentage of hull value dated 28–31 August. The recirculating ‘7.5% to 10%’ band could not be re-sourced to any named broker after July and is **NOT** published as current. The best-dated figure available is a range of 3% to 10% of hull value, against about 0.25% before the war, attributed to Marcus Baker of Marsh and dated 17 JULY 2026 — carried with that date on its face, not as an August reading (\$9.19). Two items that may or may not be newer are named but cannot be used: an i-law headline ‘Hormuz war risk premiums surpass 10%’ and a Lloyd’s List item on premiums ‘topping double-digit millions of dollars per trip’, both paywalled and **BOTH UNDATEABLE** from outside. The Joint War Committee listing is unchanged: JWLA-033 of 3 March added Bahrain, Djibouti, Kuwait, Oman and Qatar to the listed areas; the committee last reviewed in July 2026 and **NO** listing change dated 28–31 August was obtained. Seafarer casualties are counted three different ways and the three are never merged: USNI reports at least 19 deaths from US and Iranian attacks on commercial ships; UKMTO’s year-to-date counter reads 25 injury/fatalities; the IMO figure is 17 confirmed seafarer fatalities as at 11 August. Three counters, three definitions. Ports, per Al Jazeera on 27 August against its own pre-war baselines: Kuwait –86%, UAE –69% (78/day to 24/day), Qatar, Iraq and Bahrain about –66 to –68%, and Saudi Arabia only –15% because of pipelines and Red Sea ports. Bab el-Mandeb transits are down 26% since the Houthis blockade announcement of 22 July, with six fatalities reported to UKMTO since and six vessels under pirate control as of 21 August.

A2.3 · CROSS-ASSET AND MACRO RECORD — FULL

A2.3.1 · The Warsh keynote — primary text, and why it produced this curve shape

'In Our Time', Chairman Kevin Warsh, Board of Governors of the Federal Reserve System, delivered 10:00 ET Friday 28 August 2026 at the Kansas City Fed's symposium 'Financial Innovation: Implications for Payments and Policy', Jackson Hole. Published on [federalreserve.gov](https://www.federalreserve.gov) the same day and read there in full. It was his hundredth day in office.

The four passages that carry the session. On the reaction function: 'Here is my standard: We must be confident that underlying inflation is moving to our objective, clearly and at sufficient speed. Otherwise, we have work to do.' On the summer data: 'while this summer's PCE and CPI readings were better than expected, they do not tell me that underlying trends have meaningfully improved.' On financial conditions: 'Credit and loan markets are showing few signs of policy restraint... I would be hard pressed to describe broad financial conditions as restrictive.' On the labour side of the mandate, which removes the offsetting argument: 'The jobless rate, at 4.1 percent, remains low by historical standards... I believe the labor markets are consistent with full employment.' And the institutional line: 'The responsibility for 65 months of sustained, elevated inflation sits squarely with the central bank. And that is where it belongs.'

THE PASSAGE THAT EXPLAINS WHY BREAKEVENS FELL WHILE REAL RATES ROSE, and it is the analytically important one for this document. 'The good news is that measures of inflation expectations in the medium term, by and large, look stable. And inflation compensation measures from the swaps market send a strong and similar message. Especially in light of recent developments, it is a credit to the Fed as an institution... that market prices show confidence that we will deliver price stability. And I can assure you . . . they're right.' He paired it with a warning: 'market measures of inflation expectations... tend to look strong and durable until they don't... It's the Fed's job to make sure that inflation expectations do not get unanchored.' (!) A chairman who endorses the market's inflation anchor AND commits policy to defending it is asking the curve to price higher real rates and lower compensation. That is exactly what the 28 August close did — 2-year +11.14 bp against BE10 -1.56 and 5y5y -2.18 — and it is why this document does not read falling breakevens as a war-risk retreat.

On forward guidance, which is why the move concentrated at the FRONT and left the long end nearly untouched. 'You can call it an outline . . . you can call it a trail map . . . just don't call it forward guidance'; and 'Forward guidance as a regular practice... I believe that the practice has overstayed its welcome... it risks creating ambiguity in the name of clarity.' He rejected mechanical rules — 'our knowledge just doesn't extend that far' — and said the Fed should not indulge a regime in which participants look to it for their next trade. A refusal to supply a path leaves the long end with nothing new to price and forces the repricing into the tenors where policy is mechanically transmitted. The 30-year moved 1.25 bp; the 2-year moved 11.14. His dispersion statistics are the arithmetic behind 'work to do': of 199 PCE components, 54% show 12-month increases above 3% against a pre-pandemic two-decade norm of 32%, and 49% are annualising above 3% over six months; headline PCE is 3.7% y/y with the SIX-MONTH change at 4.1%. He also flagged the war channel once, and only once: 'The recent rise in overall commodity prices also bears watching.' Other content — an AI and token-economy passage, five new task forces whose recommendations 'have no bearing on decisions we make in the current policy conjuncture', and seven guiding principles including a firm 2% PCE target — is recorded and is not market-moving.

A2.3.2 · The data that lost, and September pricing

Release	Reading	Date and status
Chicago Business Barometer (MNI/ISM-Chicago)	47.1, from 57.6 in July, against a consensus near 58 — a 10.5-point collapse, first contraction in four months, lowest since December	28 August — IN WINDOW
UMich consumer sentiment, FINAL August	51.7 (preliminary 51.0), about -6% m/m and -11% y/y; current conditions 51.9, expectations 51.5. One-year inflation expectations FELL to 4.0% from 4.2%; 5-10 year held at 3.3% for a third month	28 August — IN WINDOW
BEA Personal Income and Outlays, July	Personal income +0.4%, DPI +0.5%, PCE +0.2%, saving rate 3.0%; PCE price index +3.7% y/y, core +3.3% y/y	26 August — NOT in this window and NOT dated to Friday. Stands unrevised
Atlanta Fed GDPNow, Q3	4.6%, having run 5.0% on 30 July and 6.2% on 3 August	As of 26 August. The 1 September update is PROSPECTIVE
September FOMC pricing	Futures-implied odds of a September HIKE about 59%, from about 35% on 27 August, per CME FedWatch as cited by CNBC. Kalshi 48% for a 25 bp hike. Polymarket about 69% for any 2026 hike. Separately, several outlets reported a HOLD priced at about 70% before the speech. (!) A 35% hike and a 70% hold do not sit in one distribution; they come from different instruments and different timestamps and are NOT combined	28 August. (!) Three different instruments on three different universes — reported side by side, NEVER averaged (\$9.19). FOMC meets 15-16 September

The asymmetry is the finding. A growth print in contraction, a sentiment print down 6% on the month, and household inflation expectations FALLING — and the 2-year still rose 11.14 basis points. On any normal reaction function that data set produces a rally at the front. It produced the second-largest front-end selloff of the war instead, which isolates the speech as the cause about as cleanly as a single session ever permits. (!) Two honest qualifications. Press reports of the 2-year close differ — one series shows 4.34% and another 4.38% and describes the move as 'the largest post-Jackson-Hole Fed Chair speech move this century'. This document publishes its OWN series, 4.3434%, and cites the press only for characterisation, never for the level. And the 4.3434% close is the highest since 23 July but is NOT a war high: 4.3470% on 23 July stands, 0.36 bp above.

Other Fed and Treasury record. Kansas City Fed president Jeff Schmid, hosting, said on 27 August that rates are 'too accommodative' and that inflation is 'still stubborn and it's still sticky', while declining to commit on September: 'I think we need a little bit more information.' Warsh's own text cites the 28-29 July FOMC minutes, at which three policymakers favoured a quarter-point hike. NO Fed speech, testimony or press release dated 29, 30 or 31 August was obtainable. Treasury's long-end buyback expansion — from \$2bn to at least \$4bn per operation, announced 19 August — takes effect 9 September and runs to 4 November; NO buyback announcement, operation or result occurred 28-31 August, and the 4 November quarterly refunding is PROSPECTIVE. NO coupon auction settled in the window, so the five-auction dealer-backstop run is unchanged at 12.34, 2.09, 10.90, 10.05 and 12.264 on competitive-accepted — RE-SORTED this edition, and 12.264% is the SECOND-highest.

A2.3.3 · The SPR — two published values, still unreconciled, neither withdrawn

The conflict is unchanged and both figures still stand. EIA's weekly series has the SPR at 289.7 million barrels for the week ending 21 August, released 26 August — down 3.7 million on the week, 40.6% of the 714 mn bbl authorised capacity, and described as the lowest since 26 November 1982. The DOE Office of Petroleum Reserves 'SPR Quick Facts' page, re-read on 31 August and unmodified since 24 August, still publishes 'Crude Oil Inventory by Site (as of August 20, 2026)' totalling 294.1 MMB across 61 caverns — Bryan Mound 142.5, Big Hill 89.1, Bayou Choctaw 32.0, West Hackberry 30.5. (!) The two dates are ONE DAY apart and the two totals are 4.4 MMB apart, which is not a physically plausible one-day drawdown. They are therefore DIFFERENT MEASUREMENT BASES — site-level physical inventory against weekly reported stocks — and under \$9.45 the correct handling is to publish both with their series, vintages and publishers named, withdraw neither, and compute NO delta. Context, and it does NOT reconcile arithmetically: 172 million barrels were ordered released in March 2026 and the reserve stood at 411 MMbbl on 31 December 2025, which would imply about 239 MMB against current readings near 290. That difference is NOT explained by anything published here and NO reconciliation is asserted. The next EIA Weekly Petroleum Status Report, due 2 September, is PROSPECTIVE and is the next chance to resolve this.

A7 · SOURCE LOG

Tier 1 = primary or official. Tier 2 = reputable wire or press. Tier 3 = state media or relayed claim, corroborated against Tier 1 before it is used for anything market-moving. **NOT OBTAINED** = sought and missed. **PROSPECTIVE** = relates to a session or publication that had not occurred at the Singapore cut, and is not a retrieval failure (\$9.46).

Tier	Source	Used for
1 — market data	Tecity Bloomberg extract, <i>US Iran BBG Data.xlsx</i> , 31 August pull, 172 rows to 31 August 2026	ALL scored prices, yields, spreads, volatility and both gasoline series. No market figure in this document comes from the web
1 — maritime	UKMTO Voluntary Reporting Area Overview No. 4, produced 28 Aug, read in full by direct file URL	Transit counts on both bases, route split, incident and threat-level record, TSS suspension
1 product, 2 route	UKMTO Warning 122-26 (29 Aug event, 30 Aug issue) — a Tier 1 product obtained via Tier 2 relay (Gulf News, 30 Aug) only	The Khasab tanker strike. Flagged: the primary product was not reached directly
1 — military	CENTCOM: Adm. Brad Cooper video statement (28 Aug, @CENTCOM); Capt. Tim Hawkins on the record to Newsweek and others (30 Aug)	The mine-clearance declaration and the Larak Island strike and its stated justification
1 — military	centcom.mil public-releases index and cusnc.navy.mil news index, both read direct 31 Aug	The negative: no CENTCOM release since 15 Aug, no combat release since 29 July, no NAVCENT item since 5 July
1 — US policy	Federal Reserve Board, Warsh, 'In Our Time', 28 Aug, read in full; FOMC minutes 28–29 July	Every Warsh quotation and the PCE dispersion statistics
1 — US policy	Treasury press release SB0617 (28 Aug); FinCEN Banque Misr UAE NPRM; ofac.treasury.gov recent actions and the 20260828 action page, read direct	The Section 311 NPRM, the \$1.8bn / 103 companies allegation, and the two OFAC designations
1 — US data	BEA Personal Income and Outlays (26 Aug); Atlanta Fed GDPNow page; EIA gasoline and diesel retail tables; EIA WPSR schedule; DOE SPR Quick Facts, all read direct	The macro record, the retail weekly series, and both SPR figures
1 — Oman	fm.gov.om Statements, News and Speeches pages and the ministry X feed, read direct 31 Aug	The negative: nothing on Hormuz or Iran published 28, 30 or 31 Aug; one unrelated item 29 Aug; last Iran text is the 25 Aug joint statement
1 — freight	Baltic Exchange tanker report, week 35, dated 28 Aug	TD3C at WS623 and a round-trip TCE just over \$647,000/day, and the full route table
2	Reuters, Bloomberg, CNBC, CNN, AP, Al Jazeera, USNI News, Newsweek, The National, Gulf News, Middle East Eye, UPI, gCaptain, Lloyd's List (via USNI), Fortune, TradingEconomics	The Larak strike, the blockade tally, Lloyd's and Kpler transit counts, the allied 80–150 mine assessment, September rate-odds characterisation, the Brent November level, the UAE central-bank probe
3 — RELAYED	Fars News Agency via Haaretz (31 Aug); Iranian state broadcaster via Reuters (30 Aug); Tasnim (26 Aug)	The claimed strike on King Hussein and Al-Azraq; the Larak casualty claim; Gharibabadi's 26 August rejection of the PRESIDENTIAL mine claim of 25 August — which PRE-DATES Cooper's 28 August declaration and is not a response to it. NONE is corroborated and none moves a probability on its own

NOT OBTAINED — checked and missed, with the query stated (\$9.23c). JMIC Advisory Note 091 or later, and any cumulative incident count past 97: ukmt0.org root, /recent-incidents, /ukmt0-products, /ukmt0-products/weekly-reports, the 2026 JMIC advisories index and /indian-ocean/advisories were all fetched on 31 August; the product listings are JavaScript-rendered and returned no data, and guessed PDF paths 404ed. **Absence here is NOT evidence of absence. Any US, Pentagon, CENTCOM or Jordanian confirmation of the 31 August Jordan claim** — searched and not found; results are heavily contaminated by the separate Jordan attack of 28–29 JULY, which is a different event and is not reused. **Any Israeli strike inside Iran 28–31 August** — not found; the Fars characterisation of Larak as 'US-Israeli' is uncorroborated and all Western reporting attributes it to US forces alone. **Any Houthi launch dated 28–31 August** — not found; the nearest are 24 August and 26–27 August and both are outside the window. **Any Iranian corridor statement, Omani corroboration, route coordinates, fee schedule or revenue-share text dated 28–31 August. Any readout of the Qatari PM's 27 August Tehran visit. Any US statement on negotiations 28–31 August** — Leavitt's 27 August line stands unretracted. **Windward, IMF PortWatch, TankerMap and LSEG transit figures. Any JKM assessment, OPEC/OPEC+ statement, EIA or IEA publication, Treasury buyback action, JWC listing change, or named-broker war-risk quote dated 28–31 August. Any UAE decree, cabinet resolution or gazette text for the embargo announced 18 August** — thirteen days elapsed with no published legal instrument of any kind. **Any ICE settlement notice confirming the Brent roll prices. Any outlet quoting a TTF print dated 31 August. The USNI Fleet Tracker for 31 August** — not published; the 24 August edition, updated 28 August, remains the newest, and it has George Washington and George H.W. Bush

both in the Arabian Sea with Abraham Lincoln transiting east.

§9.13 RE-VERIFICATION OF INHERITED CLAIMS — one item is **SUSPENDED** and it is reported rather than resolved. The last edition carried a clock reading 'Khamenei silent a sixth day'. Two Tier 2 reports obtained this window — The National, 28 August and 30 August — state that the incumbent Supreme Leader is Ayatollah MOJTABA Khamenei, that his father Ali Khamenei was killed in the strikes that opened the war on 28 February 2026, and that Mojtaba 'has not been seen or heard in public since he took power in March' — roughly six months, governing by written message. (!) If that is right, a day-count clock on his silence has been measuring the wrong thing for some time. This document does **NOT** assert the correction on two Tier 2 items and does **NOT** repeat the clock: the clock is **SUSPENDED** pending primary corroboration, and its suspension is disclosed. This is the §9.23 discipline applied to an inherited claim of this document's own. A written message **WAS** issued in the window — rejecting the 'imaginary dualism' of war or negotiations, urging officials not to publicise the country's weaknesses, and calling for unity — but The National's own two reports date it 'Friday' (28 August) and 'Sunday' (30 August) respectively, with near-identical quotations. That discrepancy is **UNRESOLVED** and is printed rather than picked. A second inherited item is corrected: the 28 August edition reported the **AMARA** contradiction as live between Windward and TankerMap. The 'under way' reading could not be corroborated by any reachable source this window, so she is carried as **SEIZED**, status unknown since 19 August, on Windward's time-stamped AIS reconstruction.

A8 · ON-DEMAND UPDATE PROTOCOL

#	Step	Detail
1	Refresh and verify the extract	Never build an edition off a stale extract (§9.22). Check the file mtime AND parse the sheet. This edition: the extract carries a 31 August row against the 28 August row the last edition ran on, and the 28 August row has settled into a genuine close. It is fresh.
2	Parse with a dynamic header scan	Column indices move between uploads. Auto-detect the Brent and WTI front month and take whatever label the header scan returns for DXY. Re-verify the 27 February anchor field by field — done this edition, unchanged on all seventeen fields.
3	Run all THREE integrity checks	Row-level (§9.8), field-level identical-to-4dp at the precision each series is published to (§9.35, §9.48), and the continuation-versus-active BASIS check (§9.41). This edition: row and field CLEAR ; the BASIS check FIRES TWICE — a whole-column restatement of Brent COA across 3–28 Aug, and a Brent contract roll on 31 Aug.
4	Compute deltas and test every trigger	d/d, w/w five rows back, and versus pre-war; explicit trigger tests for the four market channels plus Stage-4 A, B and C. Run min, max and last-prior-occurrence on the full column before writing ANY superlative (§9.32) — it is what established the 5-year war high, the second-largest 2-year rise and the second-largest flattening in this edition, and what stopped the 2-year being written as a war high.
5	Verify the news, and re-verify what was inherited	Every claim needs a named source and an exact date, and negative claims decay fastest of all (§9.23). State the exact query behind every negative. Say NOT OBTAINED rather than estimating, and distinguish NOT OBTAINED from PROSPECTIVE (§9.46). This edition suspended one of its OWN inherited clocks rather than repeat it (A7).
6	Build, then QA in three passes	A numeric harness against the dataframe; an adversarial PROSE pass by a reviewer with no access to the source data, run TWICE because fixing introduces defects (§9.42); and a VISUAL render, which is not optional (§9.43). Re-run the numeric harness AFTER the prose fixes.
7	Deliver both documents	The edition and the annex go into the project root together. A file that is not committed never reaches the reader. The annex does not go into the dashboard PDF folder, because the score-history script regexes a score sentence out of every PDF there and the annex has none.

A9 · METHODOLOGY

Six channels, each scored 0–5, summed to 0–30. Bands: 0–7 watch; 8–14 stress; 15–21 systemic-risk watch; 22–30 crisis. Maritime denial and escalation risk are event channels; oil, US inflation impulse, Treasury stress and political stress are market channels scored on confirmed closes.

(a) Confirmed closes only for market channels. No market channel moves on an intraday print. The 31 August snapshot in this document moves nothing — including the 5y5y forward back above 2.30%, the Threshold B lapse, and the TTF print above the war-record close. **(b) Hysteresis.** Upgrades fire on a sustained break; downgrades require a sustained reversal past a **wider** threshold. **It faces its sharpest test yet: the 5y5y forward has now closed BELOW its own firing level three times — 13 August, 25 August and 28 August — and both earlier breaks were retraced inside one session.** The channel holds at 5 because the documented downgrade is 15.44 bp lower, and the rule is **NOT** moved to meet the trigger (§9.16, §9.26). **(c) The scale saturates in BOTH directions (§9.7, §9.27).** FIVE of six channels are at the cap. **This edition is the reference case for both halves at once: the score could not register the first US strike inside Iran in 32 days, and could not register UKMTO's highest published throughput of the war either. A flat 27 is an instrument at its stop.** Rules exercised this edition, named so the reader can audit them. §9.8 and §9.35 — both clear; §9.41 — fires twice, and it is the edition's most consequential integrity finding. §9.11 — an announcement is not an event, applied symmetrically: the CENTCOM clearance declaration did **NOT** move the maritime channel any more than the corridor announcement did. §9.15 — **STATED IN FULL BECAUSE IT DOES NOT APPLY, FOR A SECOND CONSECUTIVE SESSION:** where a channel has two downgrade legs, it is **only** nearing a downgrade when **BOTH** legs move toward it in the same session; legs moving in opposite directions are **ROTATING**, and rotation is not approach. On 28 August both Treasury legs moved **AWAY** — the third state, first recorded on 21 August, now in its **THIRD** occurrence and its **SECOND** consecutive one, after 27 August; the third such session of the war. §9.19 and §9.24 — six transit universes, every denominator named, none spliced or averaged, including the two inside a single UKMTO document. §9.23 — every negative names the page checked and the date range, and one of this document's OWN inherited clocks was suspended rather than repeated. §9.26 — the broken firing trigger is led with, not footnoted, and the rule is not moved. §9.30 — the scored gasoline series is dark and no trend is read through it. §9.31 — the snapshot missed the whole US session in one direction and four readings are withdrawn **BY NAME** in A1.2, while a fifth is expressly **NOT** withdrawn. §9.32 — every superlative bounded and checked against the full column: the 5-year **IS** a war high, the 2-year is **NOT** and is written as highest since 23 July, the TTF intraday is **NOT** written as a record close, **MOVE** is written

as fifth-lowest of a phase, and the Threshold B margin is written as the SECOND-narrowest ARMING margin, the narrowest being 0.07 bp on 29 July, not as the narrowest margin of any kind. **\$9.36 and \$9.41** — both oil bases quoted, the roll disclosed, and no d/d constructed across it. **\$9.39** — Threshold A reported as untestable as written, with no tail asserted and no auction in the window. **\$9.40** — the auction run re-sorted before its rank was restated. **\$9.43** — a visual render was run before delivery. **\$9.46** — the 1 September GDPNow and EIA prints, the 2 September WPSR, the 6 September OPEC+ meeting and VRA Overview No. 5 are PROSPECTIVE and are kept out of the NOT OBTAINED register.

\$9.47 EXTENDED TO A SINGLE-COLUMN RESTATEMENT, AND A NEW OBSERVATION ABOUT WHICH COLUMN IT HIT. **\$9.47** was written on 28 August for a restatement confined to Henry Hub and TTF. This edition's restatement is narrower still — ONE column, Brent COA, across twenty sessions — and it has the same three consequences: published levels are withdrawn, a reconciliation row is excluded by name, and every superlative touching the series is re-checked. (!) The new observation is about EXPOSURE. The column that moved is the one carrying the ACTIVE-contract distance to the oil upgrade — the single most consequential secondary number in the document, quoted in every edition precisely because **\$9.36** says a reader will check it. A restatement that lands on a column nobody reads costs nothing; this one silently invalidated four editions' worth of the trigger distance a reader is most likely to verify independently. The standing fix: run the basis check BEFORE writing any oil sentence, not after, and treat a twenty-session zero basis as itself an anomaly worth interrogating rather than a quiet period.

Restatements and comparability. Vendor restatements are normal and make absolute levels non-comparable across editions, though directional analysis is continuous. A contract roll does the same thing to a continuation series silently, which is why the basis check is a standing check — and this edition had one of each, in the same series, on consecutive rows. The dual gasoline series is never re-based: AUTMUSAG is the scored reference and preserves the \$3.52 anchor and the \$4.75 trigger; USFRUSA is corroboration only; AAA's published regular headline is a third series and is never compared with either. The pre-war anchor is the 27 February 2026 close, re-verified field by field every edition; it is unchanged to date. **ONE OPEN ITEM REMAINS DISCLOSED RATHER THAN DECIDED:** the oil channel's downgrade is written as a mediated pause AND 'a close' at or below \$72.48, while its upgrade requires a SUSTAINED break — as written, the downgrade is easier to trip than the upgrade, which inverts (b). The condition is \$15.62 away and is not live, so the asymmetry is disclosed rather than settled under time pressure. **A SECOND OPEN ITEM IS ADDED THIS EDITION:** Threshold B re-armed on a bear flattener in which the 30-year contributed 1.25 bp of an 11.14 bp move. B was written to detect long-end stress and was tripped by a front-end event. Whether it should be conditioned on a long-end CONTRIBUTION rather than a long-end LEVEL is a real question and one edition should not settle it under time pressure (**\$9.33, \$9.36d**).

A10 · ANCHOR AND TRIGGER LEVELS

A10.1 · Pre-war anchor — 27 February 2026 close, re-verified this edition, unchanged

Brent	WTI	2Y	5Y	10Y	30Y	2s10s	5y5y	10y BE	MOV E	VIX	DXY	Gasoline AAA	Gasoline DOE	Henry Hub	TTF	Asia LNG
\$72.48	\$67.02	3.3749 %	3.5017 %	3.9375 %	4.6106 %	+55.64 bp	2.142 %	2.2569 %	73.38	19.86	97.608	\$3.52	~\$2.94	\$3.063	€31.23	¥1,669

A10.2 · Live trigger state on the 28 August close, with events to 31 August

Channel	Score	Upgrade	Downgrade	Distance
Maritime denial	5	At max	Verified reopening AND traffic above 25% of normal for 10 sessions	NO PUBLISHED TRAFFIC READING HAS COME THIS CLOSE TO 25%, ON ONE OF TWO COUNTS IN ONE DOCUMENT — BUT A SEVEN-DAY AGGREGATE CANNOT SATISFY A TEN-SESSION TEST. UKMTO VRA No. 4: 101 out / 103 in over seven days, 22% and 23% of its OWN pre-conflict average on an AIS-plus-dark basis — against 'approximately 90% below' on AIS alone, in the same report. The REOPENING leg is not met and moved further away: the TSS remains suspended, ZERO of 59 route-identified transits used it, a tanker was struck 12 nm N of Khasab on 29 Aug, and the US struck launchers said to be loading mines on 30 Aug
Oil price shock	2	Brent above \$95 sustained → 3	Mediated pause AND a close at or below \$72.48 → 1	Upgrade \$6.90 on the scored CO2 series, WIDENED from \$6.48 — the third widening in nine readings. Downgrade price leg \$15.62, NARROWED by \$0.42. (!) The active-contract distance of \$5.05 on 31 Aug is a DIFFERENT DELIVERY MONTH after the roll and is NOT the scored figure; the four active distances published in the four editions since 20 August are WITHDRAWN as restated (A1.1)
US inflation impulse	5	At max	5y5y sustained at or below the 2.142% anchor → 4	15.44 bp, NARROWED from 17.62 — the largest single-session narrowing since 13 Aug, and STILL the nearer of the two market candidates, at 15.44 against Treasury's 20.56. (!) 5y5y closed 2.2964%, 0.36 bp BELOW the 2.30% that fired the upgrade — the THIRD such close of the regime, after 13 and 25 Aug, both retraced inside one session. BE10 6.10 bp above its anchor, from 7.66

Channel	Score	Upgrade	Downgrade	Distance
Treasury stress	5	At max	30-year close below 5.00% WITH MOVE below 75, sustained → 4	Yield leg fails by 20.56 bp, WIDENED from 19.31; volatility leg satisfied for a NINTH consecutive close at 70.97 but by 4.03 points instead of 5.14. BOTH LEGS MOVED AWAY TOGETHER for a SECOND consecutive session — the third state of \$9.15, not a rotation and not an approach
Political stress	5	At max	Three consecutive AUTMUSAG closes at or below \$4.60 with no intervening print above \$4.70 → 4	22 cents, UNRESOLVED. Last RESOLVED print \$4.82 (27 Aug); DARK on 28 and 31 Aug (\$9.30). Corroborating evidence points down — AAA regular \$4.0787 (below week-ago AND month-ago) and diesel \$5.6035 (below week-ago, still +26.4c on the month) — but the scored series has not printed
Escalation risk	5	At max	Mediated stand-down AND talks resume → 4–3	BOTH LEGS MOVED AWAY. The stand-down leg, which the last edition called the closest recorded, is GONE: US forces struck Larak Island on 30 Aug, ending a 32-day pause in acknowledged strikes inside Iran, and the IRGC claims strikes on two Jordanian bases on 31 Aug. The talks leg remains denied on the record by the White House and no readout of the 27 Aug Qatari visit exists
Stage-4 A	—	Failed-auction test: an auction clearing with a tail above its when-issued level	—	NOT ARMED — UNTESTABLE AS WRITTEN (\$9.39). Treasury publishes no when-issued level, so the tail can never come from a primary source. NO coupon auction settled in the 28–31 Aug window. The five-auction dealer-backstop run on competitive-accepted is unchanged at 12.34, 2.09, 10.90, 10.05 and 12.264 — RE-SORTED, and 12.264% is the SECOND-highest, behind the 20-year's 12.34%
Stage-4 B	—	30-year above 5.20% AND 10-year above 4.65%	—	RE-ARMED on the 28 Aug close — the SIXTH arming, ending a THREE-close lapse of 25–27 Aug. 30-year 5.2056%, clearing by 0.56 bp, the SECOND-NARROWEST ARMING MARGIN of the run — the narrowest is 0.07 bp on 29 Jul, the arming that opened the regime, and third is 1.35 bp on 30 Jul; 10-year 4.7180%, clearing by 6.80 bp, its widest since 21 Aug. Six armings and five lapses make ELEVEN states and TEN changes since 29 July. (!) It armed on a bear FLATTENER, the 30-year contributing 1.25 bp of an 11.14 bp move. The 31 Aug intraday is short by 0.17 bp
Stage-4 C	—	MOVE above 130	—	70.97 — 59.03 points below C and 44.05 below the 115.02 war high of 26 March. NOT the furthest of the war (series low 65.39, 18 June) and only the FIFTH-lowest across the sub-75 population since 12 August — the unbroken RUN dates from 18 Aug because 17 Aug closed at 75.63 — behind 69.23 (13 Aug), 69.44 (26 Aug), 69.58 (14 Aug) and 69.86 (27 Aug). The MOVE/30-year divergence WIDENED to 61.91 from 61.77
