

HEADLINE JUDGMENT

Score HOLDS at 27/30 for a twenty-second consecutive edition. No channel moved, and what separates the score from 28 is sixty-two cents AND two closes. One, and it is the whole judgment. The scored Brent continuation closed **\$94.38** on 8 September, its highest close since 24 July, **62 cents** below the **\$95** upgrade and in from **\$1.84**; the active contract closed **\$97.92**, a **FIFTH** consecutive close through the level and its highest since 22 May. The 9 September row then marks **61 cents ABOVE** the level at **\$95.61** — the first mark on the scored series above **\$95** since 24 July. A mark decides nothing, and this document has been wrong precisely here: \$9.31 was written after an edition led on four intraday readings and withdrew all four by the next close. **Two CO2 CLOSES above \$95 fire the oil upgrade 2→3 and take the score to 28**, and the first is a session away rather than a narrative away. (!) One qualification from this document's own record: the continuation closed above **\$95** twice in July without an upgrade firing, because the active contract was below the level on both days. Both series are above or at it now. Two, and it is a correction of this document rather than a reading of the market. **ONE CLAIM PUBLISHED HERE ON 8 SEPTEMBER IS WITHDRAWN AND THREE ARE CORRECTED.** The withdrawal: CENTCOM DID release on 8 September — it says it destroyed **FIVE** Iranian tankers after ballistic missiles were fired at a US warship twice in two days — and this document's 'no release since 5 September' came off a cached index page read as though it were the world. (!) That is a release by a party to the conflict and no allied product corroborates it. The first correction: JMIC 094's **101** is the cumulative CONFIRMED-INCIDENT count since 1 March, not a transit figure; 094's transit figure is **59** vessels per 48 hours. A negative claim about a source is still a claim (\$9.23), and a mislabelled denominator is the defect \$9.19 exists to stop. Three. The gas complex set the record the oil complex did not: TTF closed **€75.841**, a **FIFTEENTH** war-record close and the first of this war above **€75**, **+142.9%** on pre-war — and the second and third corrections are ordinals of this document's own: Asia LNG's **¥4,010** was a **TWELFTH** war record, not a thirteenth, and the **\$5.18** peak of 20 May belongs to the scored series, not to AAA. Four. Five of six channels sit at the cap, so the score registers none of what this window contained: the heaviest Houthis attack on Saudi Arabia in years, four sites struck including the 400,000 b/d Jizan refinery — already offline for weeks, with the energy ministry reporting fires and a halt to SOME operations — and **73** wounded; a five-year Treasury that closed at a new **war high**; and Oman publishing three separate items on 8 September, one of them condemning those very attacks, and nothing whatever on the strait arrangement Iran (TIER 3 state media, uncorroborated claim) has now said for a third consecutive edition is days from signature. Sequencing 27 → 27 → 27 → 27 → 27.

1 · LIVE TAPE

Every **MARKET** channel is scored on the **8 September close**, the first full close since 4 September; 7 September was a US holiday that produced no **RATE** close, though the energy complex settled normally. The two **EVENT** channels carry their own as-of dates in the \$3 grid. The 9 September row is a Singapore-MORNING mark and moves no channel. \$9.8 and \$9.41 **CLEAR**; \$9.35 clears on the 8 September row and fires on the 9 September row on ONE field, the five-year, an exact repeat in a live row — (!) **the field carrying a new war high, which sits safely on the resolved CLOSE.** (!) \$9.60 DID NOT REPAIR across two extracts. Every row carries its Bloomberg ticker from the header scan. **Trigger notes are compressed to \$5A's spec**; the full commentary, integrity record and reconciliation are at ANNEX A1.

1.1 · Energy

Series	BBG ticker	4 Sep	7 Sep	8 Sep close	9 Sep mark	Trigger note (full commentary at A1.3)
Brent, front-month listed — scored	CO2 Comdty	92.32	93.16	94.38	95.61	(!) +\$1.22 , highest close since 24 July. 62 cents from the \$95 upgrade, from \$1.84 — now smaller than its own largest daily move of the run. \$21.90 above the \$72.48 downgrade
Brent, active contract	COA Comdty	96.28	97.00	97.92	99.51	(!) A FIFTH consecutive close through \$95 , the run beginning 2 September; highest since 22 May and the 28th of the war. The rule is not moved (\$9.56b)
WTI, front-month listed — scored	CL2 Comdty	88.57	LOST	90.19	91.58	(!) The 7 Sep cell is still blank two extracts on — the \$9.60 loss has not repaired. No trigger on WTI
WTI, active contract	CLA Comdty	91.48	LOST	93.03	94.73	Same loss. Basis 2.84 against Brent's 3.54; both narrowed, the same way for the first time in this run
Henry Hub natural gas	NGA Comdty	2.975	LOST	2.916	2.889	(!) 4.80% BELOW its \$3.063 anchor and widening — the only ENERGY series here under pre-war, and the evidence this is a LOADING shock
Dutch TTF natural gas	TZTA Comdty	71.952	73.306	75.841	76.770	(!) +€2.535 , a FIFTEENTH war-record close and the first above €75 . +142.9% vs pre-war, the largest multiple on the tape. Nothing claimed on the higher mark
Japan/Asia LNG	JGLA Comdty	3,929	4,010	3,975	no print	—35 off the record. (!) CORRECTED : that was the TWELFTH war-record close, not a thirteenth (\$9.32). +138.2% vs pre-war

1.2 · US Treasuries and inflation expectations

Levels in per cent; the change column spans ONE settled session across four calendar days. (!) The 7 September cells are not empty — each CARRIED its 4 September value and is unresolved, which is a different state from a blank. The unscored 20-year, not tabled here, closed 5.2521 (+0.52 bp).

Tenor	BBG ticker	4 Sep close	7 Sep	8 Sep close	9 Sep mark	4→8, bp	Trigger note
2-year	USGG2YR Index	4.3661	carry (unres.)	4.3936	4.3960	+2.75	The largest move on the curve and the front of a clean bear flattener. War high stands by 0.62 bp
5-year	USGG5YR Index	4.5448	carry (unres.)	4.5627	4.5627 unres.	+1.79	(!) A NEW WAR HIGH , taking out 4.5551 of 1 Sep by 0.76 bp . The mark repeats it EXACTLY and is unresolved
10-year	USGG10YR Index	4.7821	carry (unres.)	4.7882	4.7862	+0.61	Clears Threshold B's 4.65% leg by 13.82 bp , from 13.21 — the seventh close of the arming
30-year	USGG30YR Index	5.2423	carry (unres.)	5.2454	5.2391	+0.31	Clears 5.20% by 4.54 bp , ending three narrowings. The Treasury yield leg fails by 24.54 bp
2s10s spread	USYC2Y10 Index	41.394	carry (unres.)	39.252	38.813	-2.142	The flattest close since 28 August. (!) Consistent BY CONSTRUCTION — not a separate observation
10-year breakeven	USGGBE10 Index	2.3532	moved on a shut market	2.3751	2.3743	+2.19	(!) RESOLVED after two editions unresolved, and UPWARD — highest close since 4 June, 11.82 bp above its anchor
5y5y forward breakeven	USGG5Y5Y Index	2.3082	moved on a shut market	2.3119	2.3103	+0.37	(!) A FIFTH close above the 2.30% firing level, clearing by 1.19 bp . 16.99 bp above the 2.142% anchor

1.3 · Cross-asset

Series	BBG ticker	4 Sep	Last resolved close	vs pre-war	Note
Treasury volatility (MOVE)	MOVE Index	73.10	76.14 (8 Sep)	+2.76 vs 73.38	(!) RESOLVED after two dark rows, AND THE VOLATILITY LEG HAS LAPSED : fails 75 by 1.14 after exactly TWO sub-75 closes — a SIXTH give-back. Back ABOVE its pre-war anchor
Equity volatility (VIX)	VIX Index	14.53	15.72 (8 Sep)	-4.14 vs 19.86	+1.19, its first RESOLVED rise since 4 September; 20.8% below its anchor
US dollar index	DXY Index	99.176	98.787 (8 Sep)	+1.18 vs 97.608	-0.389, the lowest close since 13 May . (!) A weaker dollar CUSHIONS the barrel's rise in every currency but this one
SOFR overnight rate	SOFRRATE Index	3.65	3.65 (4 Sep)	-0.03 vs 3.68	Blank on the 7, 8 and 9 September rows — a genuine blank
Gasoline, retail pump — scored	AUTMUSAG Index	4.93	4.93 (4 Sep)	+1.41 vs 3.52	(!) UNRESOLVED ON THREE ROWS : the 7 Sep cell repeats \$4.93 on a shut market (\$9.48), the 8th and 9th blank. 33 cents above \$4.60 , and the condition needs THREE closes at or below it
Gasoline, DOE regular retail spot — corroboration	USFRUSA Index	no print	4.071 (31 Aug)	+1.13 vs -2.94	Weekly. The delayed EIA retail release was due 9 Sep and had NOT published — PROSPECTIVE ; the WPSR follows on the 10th

(!) **THE DIESEL RECORD RUN ENDED, BY THREE HUNDREDTHS OF A CENT**: AAA diesel printed \$5.9012 for 8 September against the \$5.9015 record of the 7th, after all-time highs on 4, 6 and 7 September. Gasoline still does not follow — AAA regular **\$4.1514** is **17.2%** below its own \$5.0165 record of 14 June 2022. (!) **CORRECTED**: the \$5.18 peak of 20 May is AUTMUSAG's, NOT an AAA record; the two were adjacent last edition and must never be joined (\$9.57). **FIVE** retail series, never compared (\$9.19), are at ANNEX A1.5 with their own records, denominators and the open scope question (\$9.61).

1.5 · Strait operational — 4-row summary (the full record, every provider and every denominator, is at ANNEX A1.4)

Strand	State at the 9 September cut (each reading carries its own date)	Source
UKMTO / incidents	(!) CORRECTED : JMJC 094's 101 is a CUMULATIVE INCIDENT count since 1 March, NOT a transit figure ; its transit figure is 59 US-facilitated vessels per 48 hours, a SUBSET and not total traffic. (!) JMJC 095 NOT OBTAINED , a second edition — three URL probes for update numbers 095–097 returned 404 and the JS index renders nothing. No claim is made that it does not exist : an index is not the source, which is this edition's own withdrawal (A2.3.7). 094, cut off at 051500Z, does not record the 8 September strikes. Hormuz SEVERE	JMJC 094; ukmtto.org read direct 9 Sep
Transits + blockade	CENTCOM 94 redirected as of 7 September, posted to X not by release; no 8 September figure — NOT FOUND . SIX UNIVERSES, NEVER SPLICED, each dated: Kpler 6 vessels on 6 Sep (daily) and separately a 10-day MEAN of 10 — a daily count and a mean are not one series; Windward 12 on 6 Sep, zero dark; Lloyd's List -12/day , 26 Aug–1 Sep, over 10,000 dwt; PortWatch 7% of its OWN ~85/day base, 30 Aug, unrefreshed, TIER 3; JMJC 59/48h facilitated; and 30–40 CLAIMED by US officials, universe undefined	Kpler via Reuters 7 Sep; Windward 6 Sep
CENTCOM / kinetic	(!) WITHDRAWN. CENTCOM DID RELEASE ON 8 SEPTEMBER — it says FIVE Iranian crude carriers were destroyed after the IRGC fired ballistic missiles at a US warship twice in two days. The last edition read a CACHED index. (!) A release by a party to the conflict, uncorroborated by any allied product; Adm. Brad Cooper is quoted framing it as economic cost. Scale: three tankers on the 5th, five on the 8th. No acknowledged strike on Iranian SOIL through 8 September, an eighth day — 9 September is unreported at the cut and is not counted	centcom.mil read direct 9 Sep
Diplomacy	OMAN PUBLISHED THREE TIMES ON 8 SEPTEMBER AND SAID NOTHING ON THE STRAIT , one item condemning the attacks on Saudi Arabia — it spoke about the region, not about this. Method: fm.gov.om homepage and English news archive read direct 9 Sep, asked for any Hormuz, Iran, navigation or mediation item; answer NONE; footer 8 September. A THIRD edition with no counterparty text (\$9.23) against Iranian claims that are TIER 3 state media and uncorroborated	fm.gov.om read direct 9 Sep

1.6 · The US retail fuel chart (AUTMUSAG scored, navy, with the **\$4.75** level that fired this channel 4→5 on 4 August; USFRUSA weekly in amber) is RELOCATED to ANNEX A1.5a. Navy ends 4 September at **\$4.93**, amber 31 August at **\$4.071**; neither is extrapolated. (!) **Neither line is AAA diesel (\$5A: material is relocated, never deleted)**.

2 · US ECONOMIC SHOCK — ANALYSIS WITH BOND YIELDS

2.1 · Bond-yield transmission, channel by channel

MARITIME DENIAL — 5/5, held. The adjudicating product is missing for a second edition, and this document has to correct what it said the last one contained.

(i) The state. The downgrade requires a verified reopening AND traffic above **25%** of normal for ten sessions. (!) 'NORMAL' STILL HAS NO SINGLE DENOMINATOR, and the test is run ONLY where one provider supplies BOTH the numerator and the baseline (\$9.19, \$9.24). On Kpler's own figures, 6 vessels against a pre-war ~130–140/day is under **5%**. On PortWatch's own, **7%** of its ~85/day base. On the last OFFICIAL volume basis — **4.9 mb/d** in Q2 against **21.6 mb/d** pre-conflict — it is **22.7%**, the nearest reading to the leg that exists and a QUARTERLY figure, stale by a quarter. Windward and Lloyd's List publish no baseline, so the test is UNTESTABLE on them and no cross-provider ratio is constructed. (!) JMIC's 59/48h is a US-FACILITATED SUBSET, not total traffic, and is not divided by anyone's baseline. Neither leg advanced. (ii) **A CORRECTION THIS DOCUMENT OWES ITS READER, AND IT IS A DENOMINATOR ERROR OF EXACTLY THE KIND \$9.19 EXISTS TO STOP.** The last edition described JMIC 094's **101** as a frozen transit count. It is not a transit count at all: it is the CUMULATIVE CONFIRMED-INCIDENT total since 1 March. 094's transit figure is **59** vessels across the 3–5 September 48 hours, US-facilitated. Every sentence built on '101 says nothing about 6, 7 or 8 September' was directionally right and numerically about the wrong series, and the correct statement is that 094 is cut off at 051500Z and therefore silent on both the incident count AND the transit count for 6–9 September. (iii) (!) JMIC Update 095 is **NOT OBTAINED**, a second consecutive edition. The method, stated once: three direct URL probes for update numbers 095, 096 and 097 on 9 September, all 404, against a JS-driven index that renders nothing. **THIS DOCUMENT DOES NOT CLAIM 095 DOES NOT EXIST.** A 404 on a guessed URL plus a non-rendering index is exactly the evidence class that made the last edition's CENTCOM negative false — that release was reachable only with an explicit page parameter — and a negative built on an index must be probed a second way before it is published (A2.3.7). The honest state is non-retrieval, not non-existence. The consequence is sharper than last edition: 094 does not record the American strikes of 8 September either, so the allied maritime record now omits the largest single kinetic event of the window. (iv) The traffic leg is unchanged in level and better characterised in structure, because a second provider published a same-day count. Windward logged **12** transits on 6 September, seven inbound and five outbound, with ZERO dark crossings; Kpler logged **6** for the same day on visible AIS-active commodity vessels, and separately a ten-day MEAN of **10** that it calls its lowest since May on no published numeric baseline. (!) These are not a discrepancy and they do not average: Windward counts AIS-transmitting cargo and tankers, Kpler counts commodity vessels only, and a same-day two-to-one spread between them is a definitional artefact (\$9.24). (!) Kpler's 15+, 13 and 10 across 4–6 September are NOT one series and are not printed as a sequence: the first two are daily counts and the third is a ten-day mean, which is why a five-point fall in two sessions is arithmetically impossible. No rate of change and no direction is computed across them. There is no 7, 8 or 9 September reading from any provider. (v) CENTCOM's tally is **94** redirected, 3 disabled, 2 boarded as of 7 September, issued on its X account rather than by release, and no 8 or 9 September figure was found. (!) The '100 ships' milestone that appears in search belongs to 23 MAY and to a different counting basis; joining it to this series would manufacture a jump that did not happen.

OIL PRICE SHOCK — 2/5, held on a 62-cent gap, with the very next mark on the wrong side of the line.

(i) The scored series closed **\$94.38**, +\$1.22, its highest close since 24 July and **62 cents** below the **\$95** upgrade. The gap has run **\$3.37**, **\$2.68**, **\$1.84**, **\$0.62** across four closes, three sessions apart — **82%** closed — and it is now SMALLER than this series' own largest daily move of those four closes. Two sessions ago the arithmetic of 'more than twice a normal day' was the reason to expect nothing imminent; that reason is gone, and saying so is the point of restating the same test each edition rather than quoting last edition's answer. (ii) THE 9 SEPTEMBER MARK IS **\$95.61 — 61 cents ABOVE** the trigger, and the first mark on the scored series above **\$95** since 24 July. **It moves nothing, and the reason is the most expensive lesson in this document.** \$9.31 was written after an edition led on four intraday readings — a forward below its trigger, a breakeven at its anchor, a lapsed threshold, a yield below its auction stop — and every one was false by that day's close, because the Singapore-morning cut had missed the entire US session in one direction. (!) THE HONEST FORM OF THAT ARGUMENT CUTS AGAINST THIS DOCUMENT AND IS PRINTED ANYWAY. The 8 September snapshot published here read **\$93.32** and settled **\$94.38**, and eleven of fourteen reconciled fields settled ABOVE their marks — so on this week's evidence the morning cut UNDERSTATES a rallying tape, which makes **\$95.61** a conservative reading of the 9 September close rather than an unreliable one. The channel is nevertheless held, and the reason is the rule and not the arithmetic: **a mark is not a close, and this document does not move a market channel on one.** (iii) The rule is not moved, and the reason is affirmative rather than procedural. The active contract closed **\$97.92**, a FIFTH consecutive close through **\$95** and the highest active close since 22 May; on COA the upgrade condition was met on 3 September and has been met every session since. But the **\$95** upgrade, the **\$72.48** downgrade and the pre-war anchor are ALL written on the continuation, so moving the upgrade alone to the active contract would leave the other two on a different series and make the channel incoherent in the opposite direction (\$9.56b). It would also be moving a rule to the series that fires it, seven days after this document disclosed the problem in the open, which is what \$9.26 forbids. **What settles this is a print, not an argument: two CO2 closes above \$95 fire the upgrade 2→3 and take the score to 28.** (iv) The basis narrowed on both contracts for the first time in this run — Brent 3.96 to 3.54, WTI 2.91 to 2.84 — so the two moved the same way, which the last two editions expressly could not say. \$9.41 clears; \$9.36 still forbids constructing anything across the two Brent series. (v) Three dated events sit in the window and no wire attributes the move to any one of them. OPEC+ held October output UNCHANGED on 6 September and next meets 4 October; **pre-meeting REPORTING, not the release, says members must first review spare capacity.** CENTCOM says it destroyed five Iranian tankers on the 8th. Houthi forces struck four Saudi sites on the 8th, including the 400,000 b/d Jizan refinery — **which was ALREADY offline from earlier attacks, so no incremental barrel loss is asserted** — with a halt to some operations and 73 wounded. (!) No quantified OPEC+ or IEA spare-capacity figure dated 4–9 September was published or found, and the **0.07 mb/d** effective-spare figure this document has carried since 14 August COULD NOT BE RE-CONFIRMED from a primary source this cycle. It is flagged as unrefreshed rather than repeated as current (\$9.13).

US INFLATION IMPULSE — 5/5, held. The breakeven resolved after two editions dark, and it resolved upward; the forward took a fifth close above its firing level.

(i) The 5y5y forward closed **2.3119%**, a **FIFTH** close above the **2.30%** level whose sustained break fired this channel 4→5 on 31 July, clearing by **1.19 bp**. The five clearances run 1.10, 0.96, 1.54, 0.82 and 1.19 bp — wider than the fourth, and NOT the widest of the five, which is worth stating because the temptation is to read the latest as the extreme. The scored downgrade, the **2.142%** anchor, sits **16.99 bp** below and has not been approached. (ii) BE10 **RESOLVED**, AFTER TWO CONSECUTIVE EDITIONS UNRESOLVED, AND IT RESOLVED THE WAY THE UNDER-CLAIMING RULE PROTECTED AGAINST. On 7 September it was a carry on a shut market (\$9.58c); on 8 September this document reported a mark of 2.3536 as an exact four-decimal repeat and asserted no change. **The 8 September close is 2.3751% — up 2.19 bp on the 4 September close and the highest close since 4 June.** Had the repeat been published as a reading, this edition would be reporting a flat breakeven on a session it rose more than two basis points. That is the seventeenth-of-August failure run in reverse, and it is the second time \$9.35 has paid on this series in three sessions. (!) No reconciliation entry exists for BE10, because a gap is a mark minus a close and the mark was published unresolved (\$9.37). Compensation now sits **11.82 bp** above its 2.2569 anchor, from 9.63. (iii) So the honest form of the standing claim has CHANGED, and it changed against the comfortable reading. For three editions this document reported ten-year compensation as flat, bounded to 4 September, and warned that the diesel records and the **\$97** close fell after that date and were untested. They have now been tested by one close, and compensation rose. **One close is a session, not a regime** (\$9.18) — but the direction is the one the pass-through thesis predicts and the one this document has spent three editions saying it could not see. (iv) It is still only one close, and the corroborating detail cuts both ways: the five-year nominal set a war high on the same session while the thirty-year rose 0.31 bp, so the move is concentrated in the belly and the front, which is a policy-path move at least as much as an inflation move. The Federal Reserve governor whose 3 September remarks are the last word before the blackout said his earlier worry about energy bleeding into goods and services 'hasn't come to pass, at least so far' — but he also said **it might not take much acceleration to nudge him toward supporting tighter policy**, and that his vote turns on the August inflation data. Both halves are quoted because the second is the half consistent with the pricing below. That data lands on 11 September, two days after this edition and inside the blackout. (v) The pricing supports a SIGN and not a number. The readings are hike-or-hold and none prices a cut above **1%**: a **52%** hike on a prediction market and **57.4%** from a futures-implied model, both dated 8 September; **44.5%** HOLD on two prediction markets dated the 9th; a **66%** hike from a futures tool dated 31 August. A fifth figure, a cross-venue volume-weighted **54.2%**, is a DERIVED construct and not a venue reading; it is recorded rather than used. (!) These sit on four incompatible venues with different contracts and methods and are NOT joined, averaged or chained (\$9.19); the two 8 September readings, taken on the same day, disagree by about five points. What survives is the sign: the September debate is hike-versus-hold.

TREASURY STRESS — 5/5, held. The volatility leg has LAPSED for the sixth time in the war, the five-year set a war high, and \$119bn of coupons is being absorbed as this is written.

(i) MOVE **RESOLVED** at **76.14** on 8 September after going dark on the 7 September row and on the 8 September MARK row — one missed session, two dark rows — and the downgrade's volatility leg has **LAPSED**: it fails **75** by **1.14**, ending a run of exactly TWO sub-75 closes (3 and 4 September). **That is the SIXTH time in this war the leg has been satisfied and given back** — single closes on 29 July, 5 August and 7 August, three on 12–14 August, nine on 18–28 August, two now — and it vindicates the refusal to convert two dark rows into a third satisfied close (\$9.9). (!) Bound that vindication properly: the downgrade is CONJUNCTIVE and the yield leg has failed since 6 July, so the SCORE was invariant to the MOVE call. What was vindicated is the leg-level statement, not the channel. Volatility is also back ABOVE its own pre-war anchor, by 2.76 points, which retires the 'fully normalised expectation of movement' framing for as long as it holds. (ii) The yield leg fails by **24.54 bp**, wider than 24.23, and has not closed below **5.00%** since 6 July. (!) The bounded form is the only honest one: the pre-war anchor of **4.6106%** sits **39 bp** INSIDE the condition, so this is a claim about the current regime and not a war-long one. Both legs moved AWAY this session — the first time in three editions that the rotation described by \$9.15 has not applied, because nothing rotated. (iii) THE CURVE IS A CLEAN BEAR FLATTENER AND, THIS TIME, IT IS MONOTONIC — which is stated only because the last edition's draft asserted monotonicity on numbers that contradicted it. From the 4 September close to the 8 September close, one settled session across four calendar days: 2Y **+2.75 bp**, 5Y **+1.79**, 10Y **+0.61**, 20Y **+0.52**, 30Y **+0.31**, each smaller than the one before it, with 2s10s **–2.14 bp** to the flattest close since 28 August. **The five-year closed 4.5627%, a NEW WAR HIGH**, taking out 4.5551 of 1 September by 0.76 bp; every other tenor's war high survives, the 2-year's by 0.62 bp. (!) The 9 September mark repeats the five-year to four decimals and is UNRESOLVED, so the record is not extended and no d/d is asserted (\$9.35). A front-led flattening into a September FOMC priced for a hike is a policy-path curve, and it is the shape a war-driven term-premium story does NOT predict. (iv) The supply test is running now and the first leg cleared without incident. The **\$58bn** 3-year of 8 September cleared **4.474%** at a bid-to-cover of **2.72**, with indirects **62.15%**, directs **26.94%** and primary dealers **10.91%** — on the COMPETITIVE-ACCEPTED denominator of **\$57.619bn**; on total award ex-SOMA those read 61.74, 26.77 and 10.84, and the two bases are never compared with one another (\$9.40). A dealer take under **11%** is the composition reading that matters and it is a comfortable one (\$9.29). (!) NO TAIL IS ASSERTED and none can be: Treasury publishes no when-issued level (\$9.39). (v) The **\$39bn** 10-year reopening auctions on 9 September and the **\$22bn** 30-year on the 10th — **\$119bn** of coupons settling 15 September, FOMC day one. Results for neither exist at the cut: **PROSPECTIVE**. August CPI lands 11 September, inside the blackout.

POLITICAL STRESS — 5/5, held. The scored series is unresolved for a third session, and the diesel record run it could not see ended by three hundredths of a cent.

(i) The scored series has NO RESOLVED OBSERVATION SINCE 4 SEPTEMBER. Its 7 September cell repeats **\$4.93** exactly on a market that was shut, which is \$9.58c; 8 and 9 September are blank. (!) \$9.48 is applied and stated rather than assumed: AUTMUSAG is a TWO-decimal retail series that repeats values genuinely — **\$4.82** ran four consecutive sessions in August — so an exact repeat carries far less improbability here than on a four-decimal yield, and the rule is being run where it discriminates weakly. Nothing turns on it: the distance to the **\$4.60** condition is **33 cents** on either reading, and the condition needs THREE closes at or below it with no intervening print above **\$4.70**, so the earliest possible downgrade is at least three prints away. The series is not extrapolated through the dark cells (\$9.30). (ii) THE RECORD RUN ENDED, AND IT ENDED BY THREE HUNDREDTHS OF A CENT. AAA's national diesel average printed **\$5.9012** for 8 September against the **\$5.9015** it set on the 7th. After all-time highs on 4, 6 and 7 September this is a first down-day, and the record STANDS at the 7 September level rather than being taken a fourth time. The 9 September national averages had not posted at the cut. (iii) **A CORRECTION, AND IT IS THIS DOCUMENT'S OWN \$9.57 FAILING IN A NEW PLACE.** The last edition set AAA's gasoline record and the scored series' own peak in adjacent sentences. They are different series: **\$5.18** on 20 May is AUTMUSAG's war high, and AAA's all-time regular record is **\$5.0165** of 14 June 2022. Neither is evidence about the other. On its own terms AUTMUSAG at **\$4.93** is **4.83%** below its

war high, while AAA regular at **\$4.1514** is **17.2%** below its 2022 record — two very different distances, and printing them side by side without the labels was the error. (iv) Gasoline still does not follow diesel. On AAA's week-ago base diesel is +26.87c and regular +5.60c, roughly five times the pace and a fourth consecutive edition of it. (!) A FIFTH retail series is not spliced in: EIA on-highway diesel read **\$5.599** for 31 August against an EIA all-time high of **\$5.810**, so on the EIA survey the record has still NOT been taken (\$9.19). Its delayed print was due 9 September and had not published at the cut. (v) THE SCOPE QUESTION STAYS OPEN AND IS NOT DECIDED HERE. AUTMUSAG is a GASOLINE series and the records were in DIESEL; the channel cannot register a distillate record BY CONSTRUCTION, which is a scope choice and not an instrument failure (\$9.61). Whether the political channel should be scored on a distillate series is a real question, and \$9.21 and \$9.56b forbid settling it on an edition that is watching the record it cannot see reverse.

ESCALATION RISK — 5/5, held. The kinetic record this document called empty was not empty, the war widened to four Saudi sites, and the mediator published three times without mentioning the strait.

(i) THE CENTRAL FACT OF THIS WINDOW IS A WITHDRAWAL. The last edition reported no CENTCOM release since 5 September and built an 'empty kinetic record' on it. **CENTCOM released on 8 September: it SAYS it destroyed FIVE Iranian crude carriers, four in the Gulf of Oman and one near Kharg, after the IRGC targeted a US warship with ballistic missiles twice in two days.** (!) That is a battle-damage claim by a party to the conflict and no allied product corroborates it — JMIC 094 predates it — and it is labelled here on the same terms as Iran's. The item was unreachable from the release index, which served a stale listing topping out at 5 September, and was reachable only with an explicit page parameter. (!) The lesson is \$9.23's, in its most literal form: **a negative claim about a source is a claim about the SOURCE, and a cached index is not the source.** The claim was load-bearing for a scenario line and it was wrong. (ii) The escalation is one of scale as well as fact. Three Iranian tankers claimed destroyed on 5 September, FIVE on the 8th; Iranian ballistic missiles fired at US warships in both windows; Adm. Brad Cooper framing it explicitly as raising the economic cost, though in a ratio — three of theirs for two of ours — that describes the 5 September action rather than the five-vessel one announced with it. This is navy-on-navy for a second time in four days, and eight Iranian vessels are claimed destroyed across the two exchanges. (iii) What IS still true is narrower and must be stated narrowly: **no acknowledged US strike on Iranian SOIL from 1 September through 8 September, an eighth day** — and 9 September is unreported at the cut on every track, so it is NOT counted. The strikes were on tankers in waters near Kharg, not on the island; no damage ashore is reported. (!) Iran's 5 September claim to have struck three tankers stays UNCORROBORATED into a fifth day; no allied product records it, which is not the same as saying it did not happen. (iv) THE WAR WIDENED, AND IT WIDENED TO A GULF STATE. On 8 September Houthi forces struck Abha International Airport, King Khalid Air Base and Aramco facilities at Abha and Jizan — four sites, **73** wounded, the 400,000 b/d Jizan refinery among them and operations temporarily suspended by the energy ministry. (!) The Jizan plant was ALREADY offline from earlier attacks, and the ministry reported a halt to SOME operations — so no incremental barrel loss is asserted and the 400,000 b/d figure is capacity, not lost supply. It is described as the heaviest such attack in years and follows the collapse of a four-year truce; Saudi Arabia struck Taiz and Marib in reply the same day. The US Secretary of State said on the 8th that the Iranian hand is behind it. (!) That attribution is a STATEMENT and is not treated as establishing Iranian direction; the scenario line below turns on the fact of Gulf-state infrastructure being struck, which is not in dispute. (v) THE MEDIATOR IS THE MISSING SIGNATURE FOR A THIRD CONSECUTIVE EDITION, AND THE NEGATIVE IS AT ITS STRONGEST YET. Iran's security-council secretary said the maps are agreed and will be signed within days; its foreign ministry said the deal is in final stages and the understanding will be lodged with the IMO within days. **(!) Both are TIER 3 state media, uncorroborated, and no IMO filing is asserted.** (!) Method, stated exactly (\$9.23c): fm.gov.om homepage and its English news archive, read direct on 9 September, asked whether ANY item touches Hormuz, Iran, navigation or the arrangement. Answer: none. **The ministry published THREE items on 8 September — on Israeli settlements, a Rwandan state visit, and a condemnation of the attacks on Saudi Arabia — so it commented on the region that day and not on this,** from a site whose footer reads last updated 8 September. Its foreign minister's signed newspaper article of 6 September says no solution has been reached and Oman is not walking away: a holding line, and the only Omani ministerial word in the window. An instrument announced by one party, unacknowledged by the second while that second speaks on other subjects, and rejected in advance by the third is not a mediated pause. The channel has been at 5/5 since 9 July and can register none of it (\$9.7).

2.2 · Stage-4 thresholds

	Test	State on the 8 September close, with events to 9 September
A	A failed coupon auction: a clearing yield with a tail above the 1pm when-issued level	UNTESTABLE AS WRITTEN (§9.39) — the test needs a when-issued level Treasury does not publish, so it returns NO state and is excluded from Stage 4 in both directions. It is neither armed nor not-armed. (!) Nothing below is a leg of A, because A has no testable legs; what follows is the COMPOSITION read (§9.29), a different and unwritten test reported here for the reader's benefit
A — supply	The coupon record the test cannot see	THE FIRST AUCTION HAS CLEARED. the \$58bn 3-year of 8 SEPTEMBER cleared 4.474% , bid-to-cover 2.72 , SOMA add-on nil, with indirects 62.15% , directs 26.94% and primary dealers 10.91% on the competitive-accepted denominator of \$57.619bn (61.74 / 26.77 / 10.84 on total award ex-SOMA — the two bases are stated, never compared, §9.40). Read the composition (§9.29): a dealer take under 11% against directs at more than a quarter is paper absorbed by end buyers, not by the backstop. (!) NO TAIL IS ASSERTED. The \$39bn 10-year reopening is auctioning on 9 SEPTEMBER and the \$22bn 30-year on the 10th — \$119bn of coupons settling 15 SEPTEMBER, FOMC day one. Results for neither exist at the cut: PROSPECTIVE. (!) The BUYBACK CONFLICT is now sourced on both sides and is NOT resolved here: Treasury's 19 August release raises long-end operations to 'at least \$4bn' effective 9 SEPTEMBER while its own tentative schedule still lists \$2bn for the 10th, and the updated schedule that release promised is unpublished. Both are primary documents and they disagree; no size is asserted. Full documents and dates at A2.3.4
B	30-year above 5.20% WITH 10-year above 4.65%	ARMED , and the run EXTENDS to a SEVENTH close on ONE arming, running 28 August to 8 September with 7 September producing no close at all. 30-year 5.2454% clearing by 4.54 bp , from 4.23 — which ENDS three consecutive narrowings on that leg; 10-year 4.7882% clearing by 13.82 bp , from 13.21. Both legs widened. Across 29 July to 8 September B has armed SIX times and lapsed FIVE — eleven states, ten changes — and the current arming is the sixth. (!) §9.49, the recorded DEFECT, is now WORSE rather than merely unchanged: B has been satisfied across SEVEN closes spanning THREE of the four curve configurations available — bear flattener, bear steepener and bull steepener; only a bull flattener has never occurred under it. A test meant to detect long-end stress has returned the same answer through all three
C	MOVE above 130	NOT ARMED , and RESOLVED after two dark sessions: MOVE closed 76.14, 53.86 points below C and 38.88 below the 115.02 war high of 26 March. (!) The Treasury downgrade's volatility leg has LAPSED on the same print, a SIXTH satisfied-then-given-back sequence (§9.18). (!) The two anchor deviations are reported SEPARATELY and no composite is constructed: volatility is now 2.76 points ABOVE its 73.38 anchor, having been below it, and the 30-year 63.48 bp ABOVE its 4.6106 anchor. The war's standing anomaly — normalised volatility around an un-normalised yield — has weakened on the volatility side for the first time since 28 August

2.3 · Cross-asset macro record — compressed

¶ THE MACRO WINDOW IS THIN AND THE FED IS SILENT: 7 September was a federal holiday, the blackout opened on 5 September, and NO Federal Reserve speech occurred 4–9 September — a CONFIRMED ABSENCE. No scheduled US macro data was released in the window. PPI lands 10 SEPTEMBER and CPI 11 SEPTEMBER, both inside the blackout; the FOMC meets 15–16 September with projections. ¶ (!) **§9.28'S FOLLOW-UP TEST DOES NOT DISCRIMINATE ON THE LEVEL.** August imports of **7.3 mb/d** against a 6.3 four-week average were the routing signal; on the 28 August week — which PRECEDES this window — they read **6.8**, exactly equidistant between the two hypotheses. What HAS collapsed is the spread to the four-week average, from **1.0 mb/d** to **0.1**, though the average itself ROSE. Crude DREW **4.5 mn bbl** on **98%** utilisation; SPR **286.6 mn bbl**, **-3.1 mn**, delivery against the March commitment rather than a new decision. The test is re-set on the 10 September WPSR. ¶ The September STEO, the delayed EIA retail print and the WPSR were all due in this window and none had published at the cut: **PROSPECTIVE.** The full macro record, Treasury-supply internals, buyback documents and Fed pricing are at ANNEX A2.3; freight and war risk at A1.6.

3 · SHOCK SCORE

27 / 30 — CRISIS band (22–30). Held for a twenty-second consecutive edition. No channel moved. Every MARKET channel is scored on the 8 September close, the first full close since 4 September; the two EVENT channels carry their own as-of dates below. \$2.1 carries the detail, A10.2 the full trigger state.

Channel	Score	Basis, with its as-of date	Distance to a change
1 · Maritime denial	5	As of 6 Sep (Kpler 6/day and a 10-day average of 10; Windward 12, zero dark), 7 Sep (CENTCOM tally 94), 5 Sep (JMIC 094 ICOD)	At the cap. The traffic leg is under 5% on Kpler's own base and 7% on PortWatch's; on the last OFFICIAL volume basis it is 22.7% , a stale Q2 figure and the nearest reading that exists. (!) 094's 101 is an INCIDENT count, not transits — CORRECTED
2 · Oil price shock	2	Brent CO2 \$94.38 , +\$1.22 , highest close since 24 July	62 cents below \$95 , from \$1.84 . (!) The 9 Sep MARK is 61 cents ABOVE and settles nothing; the ACTIVE contract closed through a FIFTH time
3 · US inflation impulse	5	5y5y 2.3119% , a FIFTH close above 2.30% . BE10 RESOLVED at 2.3751% , +2.19 bp , highest since 4 June	16.99 bp above the 2.142% anchor. (!) The flat-compensation claim is retired: one close tested it and compensation ROSE
4 · Treasury stress	5	MOVE 76.14 (8 Sep), resolved after two dark rows; 30Y 5.2454; the 5-year set a war high at 4.5627	(!) Volatility leg LAPSED — fails 75 by 1.14 , a SIXTH give-back; yield leg fails by 24.54 bp . Both legs moved away
5 · Political stress	5	AUTMUSAG UNRESOLVED on three rows; last resolved \$4.93 (4 Sep). AAA diesel's record run ENDED on the 8th by 0.03c	33 cents above \$4.60 , and the condition needs THREE closes at or below it. (!) The channel is GASOLINE and cannot see a diesel record
6 · Escalation risk	5	CENTCOM SAYS it destroyed FIVE Iranian tankers on 8 Sep after ballistic missiles at a US warship — a claim by a party to the conflict; four Saudi sites struck the same day	At the cap, and the DOWNGRADE (a mediated stand-down with talks resumed) has no candidate — that, not the cap, is what stops the score falling. (!) WITHDRAWN : the 'empty kinetic record'. No strike on Iranian SOIL through 8 September

Read the composition, not the total (\$9.7, \$9.27). Five of six channels sit at the ceiling, so the score cannot register eight Iranian vessels claimed destroyed in two navy-on-navy exchanges in four days, ballistic missiles fired at American warships in both, the heaviest Houthis attack on Saudi Arabia in years, or a mediator that published three times on 8 September without mentioning the strait. (!) What cuts the other way — an eighth day with no acknowledged American strike on Iranian soil — is blocked not by the cap but by the DOWNGRADE conditions, which need a verified reopening or a mediated stand-down with talks resumed, and neither has a candidate. (!) Oil, the only channel with headroom, moved to **62 cents** from its upgrade and the next morning's mark is through the level. **The hold is a judgment**: the **\$95** upgrade, the **\$72.48** downgrade and the pre-war anchor are ALL written on the continuation, and a mark is not a close.

4 · WHAT HAS CHANGED SINCE THE 8 SEPTEMBER EDITION

#	Change	Significance
1	The SCORED continuation closed \$94.38 , +\$1.22 , 62 cents from \$95 ; the ACTIVE contract closed \$97.92 , a FIFTH straight close through. The 9 Sep mark is \$95.61 , 61 cents ABOVE	The gap ran \$3.37 , \$2.68 , \$1.84 , \$0.62 across four closes — 82% closed, and now smaller than its own largest daily move of that run. Two CO2 closes above \$95 fire the upgrade and take the score to 28. (!) The mark decides nothing — not because it is unreliable but because it is not a close
2	WITHDRAWN — CENTCOM DID RELEASE ON 8 SEPTEMBER , saying it destroyed FIVE Iranian crude carriers after ballistic missiles hit at a US warship twice in two days. The last edition read a CACHED index page	(!) \$9.23 in its most literal form: a cached index is not the source. Eight Iranian vessels CLAIMED destroyed across two exchanges in four days, uncorroborated by any allied product — labelled on the same terms as Iran's own claims
3	CORRECTED — JMIC 094's 101 IS AN INCIDENT COUNT, NOT A TRANSIT FIGURE ; its transit figure is 59 facilitated vessels per 48 hours. Asia LNG's ¥4,010 was the TWELFTH war-record close, not a thirteenth; and \$5.18 is AUTMUSAG's peak, not an AAA record	A mislabelled denominator is the defect \$9.19 exists to stop, and an inherited ordinal is exactly as suspect as a new one (\$9.32). All three were re-checked against the primary document and the full column
4	THE WAR WIDENED . Four Saudi sites struck on 8 September — Abha airport, King Khalid Air Base and Aramco at Abha and Jizan — 73 wounded, a halt to SOME operations at the 400,000 b/d Jizan refinery, already offline from earlier attacks	The heaviest such attack in years, after a four-year truce collapsed; answered by Saudi strikes on Taiz and Marib. (!) NO incremental barrel loss is asserted. The 'Iranian hand' attribution is a STATEMENT by a party and is not treated as establishing direction
5	THE VOLATILITY LEG LAPSED : MOVE resolved at 76.14 , failing 75 by 1.14 after two sub-75 closes, a SIXTH give-back. The five-year closed 4.5627% , a new WAR HIGH ; BE10 resolved at 2.3751% , +2.19 bp	(!) Publishing the 8 September BE10 repeat as unresolved is vindicated: read as a print it would have shown a flat breakeven on a session it rose 2.19 bp . Both Treasury legs moved AWAY. The MOVE call was vindicated at LEG level only — the downgrade is conjunctive and the score was invariant

#	Change	Significance
6	OMAN PUBLISHED THREE ITEMS ON 8 SEPTEMBER — one condemning the attacks on Saudi Arabia — and nothing on the strait, while Iran (TIER 3) said the maps are agreed and an IMO filing is days away	A THIRD edition with no counterparty text, and the strongest form of the negative yet (\$9.23): the ministry spoke about the region and not about this. Its minister's 6 September article says no solution has been reached

5 · SCENARIO MAP

Scenario	Prob.	Content	Shift and why
Return to full war	38%	Sustained strikes inside Iran, with Iranian reprisals on US bases	+1, on EVENTS rather than words. FOR: ballistic missiles at a US warship twice in two days, and the American answer scaling from three claimed tankers to FIVE. AGAINST: an EIGHTH day with no acknowledged strike on Iranian soil, the half that defines the line
Deal collapse on terms	35%	The corridor framework dies; both blockades continue	UNCHANGED, and the hold is explained rather than assumed. FOR: a third edition with no Omani text, from a ministry that published three times on the 8th; Washington rejects the corridor (TIER 2, 7 Sep). AGAINST: none of it is NEW — the same silence, one edition longer, and this document will not re-price on a fact restated. (!) The 8 September Treasury threat names Iranian AIRLINES, not the corridor
Regional relapse	17%	A SUSTAINED widening to Gulf states — repeated strikes, not one episode	+2, the largest RISE. Four Saudi sites struck on 8 September, 73 wounded, after Jizan was struck on the 7th — the heaviest such attack in years, answered by strikes on Taiz and Marib. (!) The line is REWRITTEN this edition to require a SUSTAINED widening: a single-strike condition was already satisfied, and a satisfied condition cannot carry a probability
Contained but violent	7%	The present state persists: no reopening, no general war	−3, the arithmetic counterpart of the two rises. A line defined by PERSISTENCE loses weight when what it describes changes on three axes in one window: a second navy-on-navy exchange in four days, its scale up from three to five, and the war reaching four Saudi sites
Mediated pause	3%	A verified stand-down, talks resumed, a reopening on published terms	UNCHANGED at the lowest reading of the war, and HELD on NO NEW EVIDENCE — stated rather than dressed up. FOR: a 6 September signed article saying the mediator remains at the table, thin and already available to the last edition. AGAINST: no talks, venue or date exists. A floor this low has no room left to express one more silent day

Sums to 100. (!) **THREE lines moved: full war +1, regional relapse +2, contained but violent −3.** The two rises are paid for out of the containment line rather than out of each other: probability moved OUT of 'the present state persists' and INTO the two lines that name what changed. (!) Regional relapse's condition is REWRITTEN in the same breath — a single strike on Gulf infrastructure was already satisfied on 7 September, and a satisfied condition cannot carry a probability. (!) ANNEX — full \$1 commentary, the strait record, the retail-fuel chart (A1.5a), freight and war risk (A1.6), sources, protocol, methodology and trigger levels. Nothing cut, only relocated (\$5A).

6 · WATCHLIST · NEXT 24–72 HOURS

#	Watch item	Why it matters
1	Whether the SCORED continuation CLOSES above \$95 . It closed \$94.38, 62 cents away; the 9 September mark is \$95.61 and the active contract has closed through FIVE times	Two CO2 closes fire the oil upgrade 2→3 and take the score to 28 — the first score change in twenty-two editions. (!) \$9.56 then becomes a decision, and this document has committed in advance to the continuation
2	The \$39bn 10-year (9 Sep) and \$22bn 30-year (10th), settling 15 September with the 3-year — \$119bn on FOMC day one — and the 10Y–20Y buyback	The 3-year cleared 4.474% with dealers at 10.91% . (!) Threshold A stays untestable: read the composition, never a tail. Treasury's two documents disagree on the buyback size
3	August PPI on 10 September and CPI on 11 September, both inside the blackout, ahead of the 15–16 September FOMC; a governor has said his vote turns on that data	The channel is scored on a forward clearing its firing level by 1.19 bp , and the breakeven has just risen 2.19 bp on its first testable close
4	Whether AUTMUSAG PRINTS AT ALL after three unresolved rows, whether AAA diesel retakes the record it missed by 0.03c, and whether the delayed EIA retail print and the WPSR publish	The political channel is scored on the 4 September close. (!) A missing print is not a stalled series and is not extrapolated either way
5	The MARITIME AND DIPLOMATIC record: whether JMJC 095 issues, whether the CENTCOM tally moves off 94 , whether the Houthis–Saudi exchange continues, and whether Oman CONFIRMS or DISOWNS the 'agreed maps'	094 omits the window's largest kinetic event, so Iran's 5 September claim stays uncorroborated. (!) An Omani denial would be the mediator's first public contradiction of Tehran
