

ANNEX · 7 SEPTEMBER 2026

This annex is the companion to the 7 September 2026 edition and is built every day. The edition is capped at eight pages; material is RELOCATED here, never deleted. Section numbering tracks the edition: **A1** carries the full commentary for the live-tape tables and the gasoline chart, the full strait-operational record and the freight and war-risk record; **A2.3** the full cross-asset and macro record, the war-powers schedule and the SPR withdrawal; **A7** the source log; **A8** the on-demand update protocol; **A9** the methodology; **A10** the anchor and trigger levels. A figure marked **NOT OBTAINED** — or, equivalently, **NOT FOUND** — was sought and missed, and is absent from the record rather than unchanged. A figure marked **PROSPECTIVE** relates to a session or publication that had not occurred at the Singapore cut and is not a retrieval failure (\$9.46).

A1 · LIVE TAPE — FULL COMMENTARY

A1.1 · Data integrity — \$9.8 and \$9.41 CLEAR; \$9.35 FIRES, with a known and benign cause

\$9.8, the ROW-level check: **CLEARs**. The 4 September row is a genuine close. ALL FOURTEEN tape fields the last edition published as a 4 September intraday moved on settlement — Brent by **+\$0.52**, TTF by **+€0.487**, the 5-year by **+3.02 bp** — and the row additionally carries **MOVE** at 73.10, **VIX** at 14.53 and **Asia LNG** at ¥3,929, all three blank at the 4 September cut. Fourteen tape fields moved and three more arrived where the cut had been blank; seventeen of seventeen leaves no doubt the row refreshed. (!) These are TAPE fields, not the 'scored' set — they include COA, CLA and WTI, on none of which a trigger is written — and AUTMUSAG and the DOE series were dark and are outside the check.

\$9.35, the FIELD-level identical-value check: FIRES, and it fires on SIX fields at once. On the 7 September row the 2-year (4.3661), 5-year (4.5448), 10-year (4.7821), 20-year (5.2469), 30-year (5.2423) and the 2s10s spread (41.394) are ALL identical to four decimal places to their 4 September closes. **The cause is known and it is not a data defect: 7 September is US Labor Day and the US cash bond market is shut.** There will be no 7 September close for any rate field, and the next d/d runs 4→8 September. The rule's remedy is applied regardless of cause: the fields are carried **UNRESOLVED**, no day-on-day change is asserted for any of them, and none enters a reconciliation (\$9.35b, \$9.37). (!) BE10 (2.3536 vs 2.3532) and the 5y5y (2.3044 vs 2.3082) DID differ, by 0.04 and 0.38 of a basis point. **They are carried UNRESOLVED as well**, and the reasoning is stated rather than assumed: a derived generic cannot settle on a closed cash market either, so a small move in two of eight rate fields while six are pinned is an artefact of how the vendor writes the row, not an observation. Under-claiming for one session costs nothing; over-claiming on a closed market is how \$9.35 came to exist. (!) A SECOND, SEPARATE FIRING: the UNSCORED 20-year has printed 5.2469 on THREE consecutive sheet rows — 3, 4 and 7 September — so its 4 September value is itself unresolved. It is not scored, it appears in no table, and no conclusion in this document depends on it; it is recorded because a field-level test that is only run on the fields one cares about is not a test. The check was run at each series' own published precision (\$9.48). (!) The STRUCTURAL BLIND SPOT is restated every time: \$9.35 is a DAY-ON-DAY test and cannot see a restatement moving a whole COLUMN across many sessions at once (\$9.47).

\$9.41, the BASIS check: **CLEARs**, a positive result for a fifth consecutive edition. The Brent continuation-to-active basis printed 0.00 through 28 August and then 2.12, 3.08, 3.54, 3.89 and 3.96 across 31 August to 4 September, marking 3.97 on the 7 September row. One step off zero at the 31 August roll, then FOUR sessions of decelerating widening — +0.96, +0.46, +0.35, +0.07 — with no second step and no sign change, is what a correctly-rolled pair looks like. (!) WTI's independent basis moved the OTHER WAY on the same session, narrowing from 3.27 to 2.91 off its own 21 August roll, and that divergence is itself the finding: two contracts rolling on different dates produced opposite basis moves in one session, which is an argument against reading either basis as a market signal rather than a mechanical artefact. (!) The corollary is at its sharpest and it changes what a rule MEANS, not what a number is: on the 4 September close the **\$95** trigger sits above one Brent series and below the other for a **THIRD** consecutive session, and three consecutive closes is past any reading of a sustained break. \$9.36 forbids constructing anything across the boundary. **It is stated at \$2.1 and \$9.56 and is NOT resolved here.** No new restatement was found: the 2 and 3 September closes reconcile field by field against what the last two editions published for them on every scored series.

\$9.10, the two-way BACKFILL test: fires on **TWO** cells, BOTH for 3 September and BOTH upward. **AUTMUSAG's 3 September cell, reported DARK last edition, has printed at \$4.92** — two cents ABOVE the **\$4.90** carried as last resolved, a **FIFTH** consecutive rise and the highest print since 29 May. It is NOT a war high: **\$5.18** on 20 May stands (\$9.32). The political channel's distance to its downgrade **WIDENED** again, to **32 cents** from 30. SOFR's 3 September cell, also reported dark, backfilled to 3.66, resolving the 'dark for a second session' note the last edition carried; it is then dark again on 4 and 7 September. (!) \$9.10 has now fired UPWARD on the scored gasoline series in FOUR consecutive editions — **\$4.83, \$4.86, \$4.90, \$4.92**, four values and four editions — against a downgrade case that was live a fortnight ago. That is precisely why \$9.30 forbids reading a trend through dark cells: the cells that filled ran AGAINST the trend the dark ones seemed to suggest, four editions running.

A1.2 · Reconciliation of the 4 September snapshot — the payrolls session arriving after the cut

The Singapore-morning cut of 4 September preceded the ENTIRE US session, and that session contained the August employment report, released 08:30 ET — 20:30 Singapore, about twelve hours after this document's mark. **The gaps in this table are, in the main, the payrolls reaction arriving after the cut, and they should be read as one event rather than fourteen.** TEN of fourteen fields settled ABOVE the mark and four below, so this is NOT a one-directional reconciliation and it breaks the run of three (\$9.17: the error is regime-dependent and no field is modelled off a pattern). (!) The shape is what matters: the 2- and 5-year settled **2.50** and **3.02 bp** ABOVE their marks and the 10-year 1.60, while the 30-year settled **0.21 bp BELOW** — a bear flattener the snapshot could not have seen, because the print that caused it had not been published. **NO field is excluded. \$9.35's only firing on the 4 September row is the UNSCORED 20-year, which is not among the fourteen reconciled fields, so \$9.37 excludes nothing here and all fourteen gaps are computed.**

Field	Published 4 Sep snapshot	4 Sep settled close	Gap
Brent CO2	91.80	92.32	+\$0.52 — and it is the difference between an upgrade \$3.20 away and one \$2.68 away. (!) The snapshot UNDERSTATED the scored channel this time, the reverse of the last three editions
Brent COA (active)	95.81	96.28	+\$0.47 — MEASURED, both sides post-roll. (!) It settled THROUGH \$95 for a THIRD consecutive close, so the finding does not depend on the snapshot in any way
WTI CL2 / CLA	88.22 / 91.70	88.57 / 91.48	+\$0.35 / -\$0.22 — (!) OPPOSITE SIGNS on the same commodity: the WTI basis narrowed 0.57 on settlement, from 3.48 on the marks to 2.91. Brent's narrowed only 0.05 on the same test (4.01 to 3.96); it is the DAY-OVER-DAY basis, 3.89 to 3.96, that widened

Field	Published 4 Sep snapshot	4 Sep settled close	Gap
Henry Hub / TTF	2.920 / 71.465	2.975 / 71.952	+\$0.055 / +€0.487 — both settled higher. Henry Hub's discount to pre-war NARROWED to 2.87% , its smallest since 8 July, on the settlement rather than the mark
Asia LNG	no print	3,929	(!) NOT a gap but a BACKFILL , and this one arrives BELOW the record rather than at it — -31 from the ¥3,960 of 3 September, which STANDS as the twelfth war record. \$9.10
DXY	98.985	99.176	+0.191 — the part of the previous session's 0.688 fall that the dollar recovered AFTER the cut, on payrolls. Its d/d move on the close is +0.268
2-year	4.3411	4.3661	+2.50 bp — the payrolls reaction in one number. (!) The mark ALREADY had the 2-year 0.51 bp ABOVE the 3 September close, so the front end was rising at the cut; on settlement it recovered 91% of the previous session's 3.30 bp fall
5-year / 10-year	4.5146 / 4.7661	4.5448 / 4.7821	+3.02 / +1.60 bp — the LARGEST gap in the table is the 5-year, which settled within 1.03 bp of its own war high . The 10-year gap is just over half of it
30-year	5.2444	5.2423	-0.21 bp — the ONLY one of the four nominal generics to settle BELOW its mark. (!) That is the whole bear flattener: the long end went down while every shorter tenor went up. The 2s10s (-0.900) and BE10 (-0.05) also settled below their marks, and the smallest gap in the table is the 5y5y's +0.01
2s10s	42.294	41.394	-0.900 — corroborating the flattening INDEPENDENTLY of the generics. (!) The mark had ALREADY flattened 0.494 from the 3 September close; the settle roughly doubled the move
10y BE / 5y5y	2.3537 / 2.3081	2.3532 / 2.3082	-0.05 / +0.01 bp — effectively unchanged, and the 5y5y is the closest a mark has come to its own settle in this window. (!) A one-unit difference at the fourth decimal in a LIVE row is a genuine print, not a carry — the surviving half of \$9.25

NO ANALYTICAL CLAIM FROM THE 4 SEPTEMBER EDITION IS **WITHDRAWN** this edition, and that is worth stating plainly because the last three editions each withdrew something. Seven items are **SUPERSEDED** rather than withdrawn, the distinction kept because each was true when written; the full register is at A7 and the two that bear on the judgment are set out here. **(a) 'No sanctions landed; the Treasury Secretary's promised weekly bank designation did not issue.'** It issued later the same day: OFAC designated a Turkish bank and two subsidiaries on 4 September, the second bank of the campaign. The claim was accurate at a Singapore-morning cut and is superseded by an action taken after it — the \$9.46 distinction between **PROSPECTIVE** and **NOT OBTAINED**, applied to a negative. **(b) 'Tanker for tanker is ONE anonymous sourcing chain at TIER 2.'** It is now the theatre commander's stated policy on CENTCOM's own release: **DISCHARGED** upward to **TIER 1**. (!) ONE inherited figure is **CORRECTED** on a superlative sweep (\$9.32): the count of active-contract closes above **\$95** was published as twenty-six through 3 September and the correct figure is twenty-five; twenty-six is the count through 4 September. Nothing in the analysis turned on the difference, which is why it is corrected rather than argued about.

A1.3 · Energy, gas and the physical record — full commentary

Brent CO2 closed **\$92.32**, **+\$0.69**, leaving the **\$95** upgrade **\$2.68** away. The full edition-over-edition sequence is 9.78, 8.43, 5.55, 5.21, 3.03, 7.73, 8.06, 6.48, 6.90, 6.63, 3.43, 2.91, 3.37, 2.68 — **FOURTEEN** readings, nine narrowings and four widenings across thirteen transitions. **\$2.68** is the narrowest of the fourteen. (!) Bound it against the **SERIES** rather than against this document's own reading history (\$9.32): the 21 August close of **\$92.67** left a gap of **\$2.33**, so **\$2.68** is the nearest reading since 21 August and **NOT** the nearest of the war. The July readings of **\$0.93**, **-\$1.78** and **-\$5.69** sit on the far side of a roll on which the active contract never cleared the trigger and are not comparable (\$9.36). The downgrade leg is **\$19.84** above **\$72.48**. WTI CL2 closed **\$88.57**, **+\$0.54**, its highest since 10 June, so both scored crude legs rose together. Screen quotes for 'Brent' circulating this week refer to the **ACTIVE** contract; no **SCORED** price in this document is taken from the web (\$3), and web quotes are not reproduced even as corroboration because they would invite exactly the splice \$9.36 forbids. **THE ACTIVE CONTRACT HAS NOW CLOSED THROUGH \$95 THREE TIMES IN SUCCESSION AND THE SCORED SERIES MOVED TOWARD IT IN THE SAME SESSION.** COA settled **\$95.63**, **\$95.52** and **\$96.28**; CO2 settled **\$92.09**, **\$91.63** and **\$92.32**. Two consecutive closes is the specific test that fired US-inflation 4→5 on 31 July after two closes above **2.30%** and cut oil 2→1 on 3 July after two sub-anchor closes, and on both occasions this document refused to act on the first close alone. Three closes is past it. (!) **The last edition had a genuine reason for calm that this one does not: on 3 September the scored series moved AWAY while the active stayed through, so the two pointed opposite ways. On 4 September they pointed the same way.** There is no divergence left to shelter behind — only a rule written on the wider of two series that are both rising. (!) Bound the superlative before writing it (\$9.32): this is **NOT** the active contract's first close above **\$95**, nor its first run of three. It has closed above the level **TWENTY-SIX** times in this war and the last run of three was 20→22 May; the highest active close since 26 May is **\$96.28**, this one. The scored continuation has not closed above **\$95** since 24 July. \$9.36 forbids reading the two as one series and \$9.26 forbids resolving the ambiguity toward whichever series would fire the upgrade. **It is NOT resolved here; see §2.1 and §9.56.**

Gas: no new record on a close, and a mark that would be one. Japan/Asia LNG closed ¥3,929, -31, the first fall in three sessions; the ¥3,960 of 3 September **STANDS** as the twelfth **war-record close**, and 3,929 is **+135.4%** against the ¥1,669 pre-war anchor, still the largest pre-war multiple anywhere on this tape. There is no 7 September print. Dutch TTF closed €71.952, +€0.142, the **THIRD**-highest close of the war behind 2 and 1 September; €73.634 of 2 September stands as the record and this is **+130.4%** vs pre-war. (!) The 7 September **MARK** is €74.855, which is **ABOVE** that record close — and it is a **MARK** on a Singapore-morning cut, so **NOTHING** is claimed on it (A9a). A record set on a mark and given back on the close is exactly the error \$9.31 was written for. (!) A cross-check on the record framing, restated every time it is used: external reporting describes European gas as at its highest since January 2023 — a three-year high, **NOT** an all-time high, the 2022 peak being multiples above. This document's '**war-record close**' means a record **SINCE 28 FEBRUARY 2026** on the TZTA series and has never meant an all-time high. Henry Hub **ROSE 6.2 cents to \$2.975** and its discount to pre-war **NARROWED to 2.87%** from **4.90%**. (!) That is the **SMALLEST** discount since 8 July, which is also the last session on which it closed **ABOVE** the **\$3.063** anchor. **The control still holds — American gas is still below where it started the war while Asian gas sits at a record and European gas marks one — but it holds by nine cents, and if Henry Hub closes above its anchor the cleanest single piece of evidence that this is a routing shock rather than a global energy shock is gone.** That is flagged here while the distance is still positive, per \$9.16.

The refined-product record is again the sharpest corroboration, it is again not in crude, and this week it broke an all-time high. EIA's week to 28 August has distillate stocks at **104.2 mn bbl**, **14% BELOW** their five-year average and **10.1%** below the same week of 2025, against gasoline **6%** below, refineries at **98%** utilisation — the highest since August 2018 — and crude runs of 17.5 mn b/d. A system with no spare capacity cannot answer a middle-distillate shortage. AAA diesel **TOOK** its **all-time record** on 4 September and has reset it daily since (A1.5). (!) A second, non-Hormuz driver must be named rather than absorbed into the Hormuz story: a Russian diesel export suspension following strikes on Russian refineries. This document does not apportion between the two, and says so. (!) The \$9.28 import test resolves for a third time and it has NOT reverted: EIA crude imports **6.8 mn b/d** with a four-week average of 6.7, **2%** above year-ago, against the 6.3 four-week average that framed the test in mid-August. Commercial crude nonetheless **FELL 4.5 mn bbl** to 424.5 mn. Barrels that cannot reach Asia are still being landed on the US Gulf Coast.

A1.4 · Strait operational — the full record, every provider, every denominator

Provider / universe	Reading	Denominator, and what it is NOT
JMIC Update 094 — US NCAGS	59 Strait transits over a window JMIC labels 3–5 Sep and calls 48 hours; narrative text puts the week above 20/day	'U.S.-facilitated Strait of Hormuz transits only'. Stated historical average ~138 vessels/day on a 2025 baseline. (!) THE ONLY LIKE-FOR-LIKE SERIES IN THIS RECORD, AND ITS DENOMINATOR IS BROKEN: 3–5 September spans THREE calendar days while 094 labels the window 48 hours, so 59 is either 29.5/day or 19.7/day and the two answers sit on opposite sides of 093's 22.0. NO per-day rate is computed and NO ranking is asserted. On the RAW counts the series reads 39, 44, 59 across the last three reports — rising on two — and 091's own rate was ABOVE 092's, so 'three consecutive rises' would be wrong on any basis. It counts vessels the US Navy is shepherding — ESCORT ACTIVITY, not a functioning waterway
JMIC Update 094 — S&P Maritime / SeaVision annex	ZERO on 3 Sep, FIVE on 4 Sep, ONE on 5 Sep — six across 72 hours	'Cargo carrying vessels above 1,000 DWT, excluding vessels calling Iranian ports adjacent to the SoH', non-facilitated. (!) 59 over 48h and 6 over 72h sit in ONE document, an order of magnitude apart. 094 is the FIRST issue to name the split in its own text , contrasting independent tracking showing single digits in both directions with NCAGS data averaging over twenty a day for the week. Naming a discrepancy is not reconciling it, and they are NOT blended (\$9.24)
Kpler via Reuters — commodity vessels	A ten-day moving average of 10/day on Sunday 6 Sep, the LOWEST SINCE MAY , against the provider's own successive readings of above 15 on Friday and about 13 on Saturday. (!) A ten-day mean cannot fall five points in two sessions, so the three readings are not all on one basis; they are reported as the provider gave them and no rate of change is computed from them. TWO transits on Sat 5 Sep and SIX on Sun 6 Sep, mostly on the IRANIAN route. One VLCC entered on Sunday; NONE has exited since Wednesday 2 Sep	Commodity-carrying vessels; transponder-off vessels excluded. Pre-war ~130–140/day. (!) This is the series \$9.24 identifies as internally consistent week on week, and it is the one that has deteriorated most. The VLCC asymmetry is the single most legible physical fact in this record: crude is going in and not coming out.
LSEG via Reuters — single-vessel observation	A tanker carrying refined products from a Saudi port attempted to leave the Gulf via Hormuz on Sunday 6 September and TURNED BACK	One vessel, not a count, and it is reported as an observation rather than a statistic. (!) It is carried because a turn-back is a different datum from a low transit count: it is a decision taken with the strait in view
Windward MIOC — all transits, AIS plus dark	NOT FOUND for 4–7 September	24-hour window, all vessel types, AIS and dark. A DIFFERENT universe from every other row and never merged (\$9.24). (!) The last published reading remains 3 September; no update covering this window was obtainable, and no number is supplied in its place
IMF PortWatch — AIS transit calls	6 crossings on 30 Aug against 3 on 29 Aug = 7% of typical — UNCHANGED , still its most recent published day	Its OWN pre-crisis baseline of ~85/day, which is NOT UKMTO's 138 and NOT JMIC's. (!) PortWatch publishes weekly on Tuesdays and 30 August is still its latest published day, so this row is a week stale and is labelled as such rather than refreshed
Lloyd's List Intelligence — still WITHDRAWN	—	(!) The 108 transits / +27% w/w withdrawn last edition is NOT revived; no restatement was found and no Lloyd's List transit series is carried. Its universe was 'cargo-carrying vessels over 10,000 dwt'
UKMTO VRA Overview — two universes in ONE document	No. 4 STILL STANDS: AIS plus dark, 101 outbound / 103 inbound over the seven days to 27 Aug; AIS only, 'approximately 90% below pre-conflict baselines'	22% and 23% of UKMTO's OWN pre-conflict average — which the arithmetic puts near 65 transits a day, a THIRD baseline distinct from PortWatch's 85 and JMIC's 138 — and about 10% on the second. THE SAME DOCUMENT, A DIFFERENT UNIVERSE, AN ORDER-OF-MAGNITUDE DIFFERENT ANSWER. (!) No. 5 was due Friday 4 September and has NOT posted — now a week overdue, and recorded as NOT FOUND rather than prospective
CENTCOM blockade tally, via JMIC 094	87 redirected / 3 disabled / 2 boarded, cited as the 'latest available official CENTCOM figure (03 September)'	(!) A BLOCKADE TALLY , NOT A TRANSIT COUNT. It MOVED for a second consecutive edition, from 84/3/2 dated 1 September. Redirections +3; disabled and boarded unchanged. Prior: 82 on 29 Aug, 71 on 24 Aug. (!) A circulating 'about 90' is a press paraphrase attributed to 'the US military' that could NOT be sourced to any CENTCOM release or dated post, and is NOT used
JMIC 094 — cumulative incidents	101 since 1 March — NIL since the last report, against 101 and one in 093	Confirmed incidents in the JMIC AOR — the whole Middle East Maritime Region, NOT Hormuz alone. 094 states in terms that there have been no third-flag merchant incidents since its last report. (!) THE THREE US-STRUCK IRANIAN TANKERS ARE LOGGED SEPARATELY as UKMTO Advisory 127-26 A/B/C and are expressly classed a military-on-listed-tanker event rather than an attack on a third-flag merchant, so they do NOT enter the 101. This document adopts that classification rather than blurring it. (!) The advisory text itself names NO vessel; the mapping of 127-26 A/B/C onto the three CENTCOM-named tankers is this document's INFERENCE from timing and geography and is stated as one. (!) 094's ICOD is 051500Z, so the frozen count cannot speak to anything after the afternoon of 5 September

Provider / universe	Reading	Denominator, and what it is NOT
JMIC 094 — mine language	(!) UNCHANGED FROM 093 AND STILL ABSENT: no declared mine danger area, no coordinates, no NAVCENT clearance-operations status. The only mine text remains the advisory to 'remain vigilant for mining activity within and adjacent to the TSS'	TWO CONSECUTIVE ISSUES NOW CARRY THE WEAKER FORMULA, SO THE DELETION IS A SETTLED CHANGE RATHER THAN AN EDITING ARTEFACT. 091 and 092 both said mine danger areas were 'still active' with clearance operations continuing. (!) It is still NOT a statement that the mines are cleared, and no party declared the Strait mine-free in this window. Weaker evidence in BOTH directions
UKMTO warnings and advisories	ADVISORY 127-26 (5 Sep, 1338 UTC): several merchant vessels in the Northern Arabian Gulf and Gulf of Oman subject to 'disabling fire as part of ongoing military activity'; UKMTO unable to confirm casualties or environmental impact. (!) NOTHING issued 6 or 7 September	Both 2026 listings read directly on 7 September — the exact query being every warning and advisory filed under September. NO product exists for the attacks Iran claims to have carried out on 5-6 September , and none for the vessel it claims to have struck on 6 September, which CENTCOM's named spokesman called a lie

A1.4a · Primary text — the statements the judgment rests on, verbatim

Relocated here from the headline under the two-document format so the judgment can be read at length while the wording stays auditable. Each is quoted as its publisher wrote it; the tier and the retrieval route are in A7.

Source, tier and date	Verbatim
US Central Command, public release — TIER 1 , 5 Sep	'CENTCOM Destroys 3 IRGC Oil Tankers After Iran Targets 2 U.S. Navy Warships'. The IRGC 'launched ballistic missiles toward two U.S. Navy warships patrolling regional waters' — a carrier and a guided-missile destroyer — both of which 'successfully evaded', with no US personnel harmed. Targets named: <i>M/T Downy</i> , 'permanently disabled' off Kharg Island; <i>M/T Stark 1</i> , 'permanently disabled' near Jask; <i>M/T Kylo</i> (aka <i>Noxen</i>), unladen, 'completely destroyed' in the Gulf of Oman, struck 'in multiple critical locations to render it inoperable after the crew was directed to abandon ship'. (!) The FIRST CENTCOM product of this war carrying a target list AND a battle damage assessment
Adm. Brad Cooper, CENTCOM commander — TIER 1 , 5 Sep	'Let the message to the IRGC be clear: If you shoot at two of our ships, we will impose an even higher economic cost — taking out three of yours... We will not hesitate to defend American forces, and if necessary, destroy Iran's limited and exposed oil fleet.' (!) This is what DISCHARGES 'tanker for tanker' from TIER 2 to TIER 1 : the policy the 3 and 4 September editions carried on one anonymous sourcing chain is now stated by the named theatre commander on his own command's release
Mohsen Rezaei, Secretary of Iran's Supreme National Security Council, on state television — TIER 1 as an Iranian official statement, 6 Sep	Iran will announce a restricted or exclusion zone outside the Strait in 'the coming days and weeks', which 'will begin from the line of the U.S. naval blockade, extend toward the Strait of Hormuz, and from this side continue into the Persian Gulf'; ships entering it 'will be added to Iran's sanctions list'. Separately: 'Maps detailing the passage of ships in the Strait of Hormuz have been agreed with Oman and will be signed in the coming days.' (!) The zone claim is a statement of Iranian intent and is Tier 1 as such. The OMAN claim is a statement about a THIRD PARTY and Oman has published nothing confirming it
Sayyid Badr Albusaidi, Foreign Minister of Oman, text republished by his own ministry — TIER 1 , 4 Sep	'A key focus for Omani diplomacy over the last months has been on trying to achieve an agreement which would restore freedom of navigation through the Strait of Hormuz... A solution has not yet been reached. But we are not walking away.' (!) This is the ONLY Omani publication in the window and it says the opposite of an imminent signature. fm.gov.om was read directly on 7 September and the last Iran-related item on its statements page remains the 25 August joint statement
Capt. Tim Hawkins, CENTCOM spokesman, on Iran's drone-boat claim — TIER 1 denial, 6 Sep	Iranian state media said the IRGC had struck a US uncrewed surface vessel attempting to enter an area Iran says is restricted. Hawkins called the claim 'a total lie'. (!) A NAMED official denial, which is a different evidentiary object from the absence of a confirmation, and the distinction is kept
IRGC Navy, Telegram statement — TIER 3, UNCORROBORATED , 5 Sep	It said it had targeted three oil tankers using an 'unauthorised' route through the Strait, plus a number of US-linked vessels, in retaliation for the American tanker strikes; the post did NOT state whether the vessels were hit. (!) NO vessel is named, NO flag, NO damage report. JMJC 094 records NIL new incidents and the count is frozen at 101; NO UKMTO warning or advisory exists. This is the clearest case in weeks of a Tier 3 claim contradicted by the allied record

A1.5 · Retail fuel — three series, never compared, and an all-time record taken

(!) **THE RECORD FELL, ONE DAY AFTER THE LAST EDITION PUT IT 3.27 CENTS AWAY.** AAA's national average diesel price printed **\$5.85** on 4 September, through the **\$5.8159** set on 19 June 2022, and has reset the record on each of the two days since: **\$5.8819** on 5 September and **\$5.8970** on 6 September. **AAA's own 'highest recorded average price' table, read directly on 7 September, now reads \$5.8970 set 6 September 2026, and the 2022 figure is no longer displayed.** This is the FIRST US retail fuel price to exceed a pre-war all-time high in this war, and it is a fuel on which no trigger is written. Gasoline did not follow: AAA regular reads **\$4.1473** against its own **\$5.0165** record of 14 June 2022, and the two fuels separated further — **+6.86c** on the week for regular against **+29.35c** for diesel, more than four times the pace for a second consecutive edition. (!) AAA separately states that the national average has never been above **\$4.00** on a Labor Day and that the prior Labor Day record is **\$3.82**, set 3 September 2012; its 3 September release described the 2026 holiday as 'on track to' set that record rather than declaring it set, and no subsequent AAA release confirming the completed record was found — **NOT FOUND**, and the framing is left as AAA left it. **The withdrawal of the 'AAA all-grades' description of AUTMUSAG STANDS** and the §1.4 chart legend has been corrected to the vendor's own label this edition. The reconciliation of AUTMUSAG to any published AAA construction remains OPEN. The trigger is NOT moved and the score does NOT change (\$9.21, \$9.56b).

Series	Latest resolved	Denominator and note
AUTMUSAG — the SCORED series	\$4.92 (3 Sep, BACKFILLED this edition)	Vendor label: 'US Average Gasoline Price', daily, one-day lag. The 'AAA all-grades' gloss remains WITHDRAWN . Backfilled UP two cents from the \$4.90 carried — a FIFTH consecutive rise and the highest print since 29 May. NOT a war high: \$5.18 on 20 May stands (\$9.32). Dark on 4 and 7 September and NOT extrapolated. 32 cents above the \$4.60 downgrade condition and 17 above the \$4.75 that fired the upgrade. Preserves the \$3.52 anchor and the full history; never re-based

Series	Latest resolved	Denominator and note
USFRUSA — corroboration only	\$4.071 (31 Aug survey)	DOE regular-grade retail spot, weekly, surveyed Monday. UNCHANGED because no survey has been published since. (!) Its gap to the scored series' latest resolved print is 84.9c, but the two prints are THREE DAYS apart and the gap is OUTSIDE the 51.6c–75.9c war-long range — a reason not to difference them, not a finding about the spread. (!) The 7 September survey falls on the federal holiday and the EIA release is delayed to 10 September, so this series is dark and the divergence with the AAA daily cannot be tested until the 10 September release. Its last reading had on-highway diesel at \$5.599 , –5.3c on the week — falling, in the week before AAA's daily took an all-time record. Different surveys, different panels, different dates, never merged. Pre-war – \$2.94 , peak \$4.50
AAA published headline — read direct 7 Sep	Regular \$4.1473 , mid \$4.6486 , premium \$5.0327 , diesel \$5.8970 , E85 \$3.1296 — page stamped 'price as of 9/6/26'	AAA national averages by grade. (!) The 7 September print had NOT posted when the page was read and is not estimated. The two fuels are separating on every horizon: on the day regular +0.14c against diesel +1.51c; on the week +6.86c against +29.35c; on the month +8.40c against +54.96c; on the year +94.7c against + \$2.186 . (!) AAA's own record table now carries diesel at \$5.8970 set 6 September 2026 , superseding the \$5.8159 of 19 June 2022 that this document carried as the record for months. It remains an ALL-TIME record and is never to be called a war high (\$9.32); AAA's regular record of \$5.0165 (14 Jun 2022) is unbroken

A1.6 · Freight, war risk and ports

THE BALTIC FREIGHT READ IS RESTORED and the week-35 uncertainty is resolved. Week 36 posted: TD3C, 270,000 mt Middle East Gulf–China, assessed **WS 677.22** on Thursday 3 September against WS 631.67 on 28 August — +45.55 points, +7.2% on the week — with a daily round-trip time-charter equivalent just under **\$704,000/day** for the standard Baltic VLCC. TD34 Gulf of Oman–China WS 272.5, +42 points, TCE above **\$261,800/day**; TD15 West Africa–China WS 236.88, +33 points, TCE ~**\$210,600/day**; TD22 US Gulf–China just under **\$28mn** lumpsum, +**\$3.6mn**. (!) The week-35 TD3C figure this document carried as **UNCONFIRMED ON RE-CHECK** — WS623, TCE just over **\$647,000/day** — is CONSISTENT with the week-36 assessment's own 28 August comparator of WS 631.67, close but not identical, so it is **SUPERSEDED** by the Baltic's own prior-week figure rather than confirmed. No freight conclusion in this edition rests on the withdrawn number. (!) **The most instructive line in the freight table is the one that fell.** LNG freight moved the OTHER WAY: BLNG1

Australia–Japan –**\$9,000** on the week to **\$21,400/day**, with elevated vessel availability in both basins. Qatari cargoes are not moving, so LNG tonnage idles while the LNG COMMODITY sets records — a counterintuitive pairing that is in the primary data and is stated rather than smoothed. LPG went the other way: BLPG1 Ras Tanura–Chiba at **\$225.50** with a TCE of **\$216,062/day**, and BLPG3 Houston–Chiba +**\$18.25** on the week to \$283.33, TCE +\$11,621 to \$167,329/day. Clean tankers: TC5 MEG–Japan at WS 621, and TC17 — a separate route, MEG–East Africa — at a **\$64,200/day** TCE, against TC2 Atlantic at roughly WS 100 and a NEGATIVE TCE of –**\$6,100/day**: the Gulf premium is the entire story, and the Atlantic clean market is loss-making at the same time.

WAR RISK: unchanged, and the standing caution is repeated rather than dropped. The most defensible anchor remains Marsh's 7.5%–10% of hull value per voyage, published 22 July via S&P Global, against roughly 0.25% pre-war — that is **\$7.5mn** to **\$10mn** on a \$100mn tanker against about **\$250,000** before the war, and the denominator is named because the figure is meaningless without it (\$9.19). Lloyd's List's **\$10mn–\$14mn** per voyage on a hull worth about **\$138mn** — 7.2% to 10.1% — STRADDLES that range at both ends rather than sitting inside it, and is retained as a second, wider estimate rather than as corroboration. (!) The straits.live derived multiple of '40.0x pre-crisis' is STILL NOT CARRIED: its own panel shows the insurance input was last set on 18 August, twenty days before this read, and the same secondary literature contains an irreconcilable '4,000 times' claim from June. A number that cannot be reconciled with its own literature is not made usable by being repeated. The Joint War Committee listed-areas circular last changed **29 July 2026** and is UNCHANGED through 7 September. **The 'six P&I clubs withdrawn' line withdrawn on 7 August is NOT revived**; it re-surfaced in a single secondary source this window and could not be independently confirmed, and the Lloyd's Market Association's own position — that the constraint is safety, not insurance availability — still contradicts it.

PHYSICAL AND PORTS. Iranian export volume, loading counts and tanker-queue figures for 4–7 September were sought from Kpler, Vortexa and TankerTrackers and NONE was published for the window — recorded as **NOT FOUND**, with no number supplied in their place. (!) What WAS obtained is a Windward reading data-dated 3 September: **22 tankers in the Kharg Island waiting area, 20 of them AIS-dark, carrying an estimated 22.3–24.9 million barrels of Iranian crude across eighteen assessed-laden vessels, with all three terminal berths EMPTY.** That is floating storage substituting for blocked export, and it is the physical counterpart to Kpler's observation that no VLCC has exited the Strait since 2 September. JMIC 094 separately records a large number of AIS-off vessels in the vicinity of Kharg. (!) A US Treasury statement on 6 September that only about **30 million barrels** of Iranian crude remain unsold to China is a MINISTERIAL CHARACTERISATION, not a measurement, and is recorded as such rather than as a stock figure. The standing August figures are carried unchanged and their two denominators are never averaged: Kharg-only August loadings 135,000 b/d against 1.98 mn b/d in February, a **93%** collapse, while a second Kpler figure of 251,000 b/d covers ALL Iranian loading points. Iran's PGSA blacklist rose to **57** vessels as of 5 September, from 56 on 2 September; delisting requires a formal application and any vessel conducting ship-to-ship with a listed vessel is itself added. (!) Rezaei's announced exclusion zone would feed that list by its own terms. AMARA (IMO 933280) is UNCHANGED — seized, status unknown since 19 August. Five merchant vessels remain held per JMIC 094 — HONOUR 25, SWARD, EUREKA, ASANA and SEAMULL (SIBU 1) — the same five, none Iranian.

A2.3 · CROSS-ASSET AND MACRO RECORD — FULL

A2.3.1 · A bear flattener on payrolls, and a volatility leg satisfied a second session while the yield leg stayed 24 bp away

The 4 September close was a **BEAR FLATTENER** falling monotonically with tenor: 2-year +**3.01 bp** to **4.3661%**, 5-year +**3.04** to **4.5448%**, 10-year +**1.41** to **4.7821%**, 30-year –**0.42** to **5.2423%**, with the separately-published 2s10s spread –1.394 to 41.394 corroborating the shape independently of the four generics (\$9.54). It is the inverse of the two bull steepeners that preceded it and the first bear flattener since 1

September. (!) It is NOT monotonic with tenor — the 5-year rose 0.03 bp more than the 2-year — and that is stated rather than smoothed. **The cause is domestic and dateable: the August employment report, released 08:30 ET, about twelve hours after this document's previous cut.** (!) The mechanism is worth stating because the direction of the 30-year is counterintuitive: a market pricing a HIKE into a supply shock is pricing a central bank DEFENDING its target, which lifts the near path and leaves or lowers the far one. The 30-year did not rally on Hormuz; it fell because the front end rose. Every **war-high close** set on 1 September at the 2-, 5- and 10-year survives — **4.3998%** by 3.37 bp, **4.5551%** by 1.03 bp and **4.7981%** by 1.60 bp — and the 5-year came closest to taking one. The 30-year set no war high on 1 September; its war high is 5.3060% of 17 August.

MOVE closed 73.10, -1.58 — a SECOND consecutive close below 75 and the FIRST close below the 73.38 pre-war anchor since 28 August. The Treasury downgrade's volatility leg is **SATISFIED** a second session, which is the question the last edition's watchlist put and the answer is yes. The yield leg fails by **24.23 bp**, narrowed from 24.65 — and it narrowed because the yield fell, not because volatility converged on it. (!) \$9.15 requires BOTH gaps to be computed and compared rather than the satisfied one reported alone, and on that test this is the MOST favourable session the downgrade has had: both legs improved together, MOVE 74.68 → 73.10 and the yield gap 24.65 → 24.23 bp. (!) \$9.18 is NOT discharged by two closes and the series says why: the longest sub-75 run since the current regime began on 29 July is NINE closes, 18–28 August, and it ended in a single session on 31 August at 75.32 — while the war's longest is TWENTY-ONE closes, 10 June–10 July, bounded here rather than left to imply that nine is a maximum (\$9.32); the leg was satisfied and given back inside one session on 5 August and again on 7 August. Two closes is the start of a run. **The yield leg has not been within 15 bp of its condition since 28 July, and the 30-year has not closed below 5.00% since 6 July** — bounded to the regime rather than to the war, because the 30-year opened this war at its 4.6106% anchor, 39 bp INSIDE the condition (\$9.32). (!) THE AUGUST ANOMALY IS BACK AND IT IS RECORDED AGAIN: Treasury volatility is **0.28 points BELOW** its pre-war anchor while the 30-year sits **63.17 bp ABOVE** its own — opposite sides for the first time since 28 August. A fully normalised expectation of movement around a yield that has not normalised at all. The two deviations are reported separately and no composite is constructed.

A2.3.2 · The August employment report, and the data around it

Nonfarm payrolls +162,000 in August against a consensus reported in the range +53,000 to +56,000 — roughly three times the poll. **Unemployment unchanged at 4.1%.** Average hourly earnings +\$0.10 to \$37.75, +0.3% m/m and +3.1% y/y. **The revisions are the more consequential half: June UP +11,000 to +31,000 and July UP +44,000 from -23,000 to +21,000 — a combined +55,000, with July flipping from a contraction to an expansion.** BLS states the August gain exceeded the average monthly gain of the prior twelve months; secondary reporting puts that trailing average near +31,000 a month — a DIFFERENT 31,000 from June's revised level above, and not to be read off it — so August ran roughly five times its own run-rate. (!) That denominator is named because the multiple is meaningless without it (\$9.19), and it is a secondary figure sitting beside a primary one, never merged with it. Sector detail from BLS: gains in food services and drinking places and in local government education; INFORMATION lost jobs. (!) The labour-force participation rate of 61.6% appears in secondary reporting and could NOT be verified in the primary text read: it is recorded as **NOT VERIFIED** rather than repeated as primary. The rest of the window's data, dated. **ISM Services for August, 3 September: headline 55.4** from 54.1, a 26th consecutive month of expansion, on Business Activity 61.7 and New Orders 60.9 — but **Prices Paid 72.6** from 70.3, the FIFTH reading above 70 in six months, with ISM citing petroleum products and fuel explicitly, and **Employment 47.8**, contracting a SECOND month. **July trade, 3 September: the goods-and-services deficit widened \$17.4bn to \$88.6bn** on imports +\$10.8bn and exports -\$6.6bn. (!) Its year-to-date basis runs the other way — the Jan-Jul deficit is **29.6% BELOW** the same period of 2025 — and the monthly widening and the year-to-date narrowing are on different bases and are never blended (\$9.19). July factory orders, 2 September: **+0.9%** to \$663.6bn. (!) Initial jobless claims for the week ended 29 August, released 3 September, could NOT be verified at a primary source and are recorded as **NOT FOUND**; the 206k this document carried last edition is NOT repeated as confirmed. The Federal Reserve G.19 consumer credit release for July had not been published in this window.

A2.3.3 · Fed pricing — two venues, never averaged, and a date that now matters more than the Gulf

The September question is a HIKE, not a cut, and the meeting is 15–16 September. CME-implied odds of a **25 bp** increase, each reading dated: **66.1%** on 31 August after the Jackson Hole keynote; about **63%** on 2 September; **48.4%** on 3 September after a Federal Reserve governor said he would be inclined to support holding if the next fortnight's data cooperated; **49.4%** at that day's close on a second outlet's reading; and **58.4%** on 4 September after payrolls, an increase of about nine points in a day. **That governor named August CPI, released 11 SEPTEMBER, as the decisive input.** (!) A prediction-market venue reads the same question between roughly 52% and 72% across late-August and early-September snapshots that could not be pinned to a single timestamp in this window; the LEVEL is therefore unresolved and only the DIRECTION is carried. **No cross-venue composite is constructed (\$9.24)**, and a venue whose timestamp cannot be fixed does not get averaged into one whose can. (!) NO remarks from the Federal Reserve chair were found between 3 and 7 September — **NOT FOUND**, with the 28 August keynote remaining the last.

A2.3.4 · Treasury supply — three coupon legs, \$246bn of bills and the first enlarged buyback, all inside four days

Recovered from primary Treasury auction data, the standing method of \$9.39a. Announced 3 September, all settling **15 SEPTEMBER**, the first day of the FOMC: a **\$58bn 3-year note**, new issue, auction Tuesday **8 September**; a **\$39bn 10-year note reopening**, auction Wednesday **9 September**; a **\$22bn 30-year bond reopening**, auction Thursday **10 September**. **\$119bn of coupons.** (!) NO trend is read from the 30-year's \$22bn against August's \$25bn: that is a reopening against a new issue and the denominators differ (\$9.40). Bills also announced 3 September and auctioning on **8 September** rather than the usual Monday, shifted by the federal holiday: 13-week **\$92bn**, 26-week **\$79bn**, 6-week **\$75bn** — **\$246bn**, which is supply in the same week and is stated separately rather than added to the coupon figure. The 17-week, 4-week and 8-week bill sizes for that week were still unannounced at the cut and are **PROSPECTIVE**. Next long-end supply after this: a 20-year reopening auctioning 15 September and a 10-year TIPS reopening on 17 September. **The next QUARTERLY refunding announcement is 4 November; the 3 September announcement is not one, and calling it one would misstate the calendar.** (!) THE DEMAND SIDE LANDS IN THE SAME WEEK: Treasury's enlarged nominal long-end liquidity-support buybacks BEGIN **9 SEPTEMBER**, the same session as the 10-year reopening — a supply event and a demand-side offset on one day, which is part of why the 30-year did not sell off on 4 September. The updated tentative buyback schedule promised in the announcing release is STILL NOT PUBLISHED. (!) Threshold A stays **UNTESTABLE AS WRITTEN** (\$9.39): Treasury publishes no when-issued level, so a tail cannot be sourced. Read the ALLOTMENT COMPOSITION instead — indirect, direct and dealer shares, with the denominator named (\$9.29, \$9.40).

A2.3.5 · War Powers — the statutory clock expires TOMORROW, into a chamber that is not sitting

Re-verified against the primary schedule rather than carried. The war-powers notification was dated 10 July, so the 60-day clock expires **8 SEPTEMBER — tomorrow** — and the 30-day withdrawal extension runs to 8 October. **The Senate's own tentative 2026 schedule places a non-legislative period from 10 August to 11 September, with Labor Day today, and the chamber does not return to legislative session until Monday 14 September.** The statutory expiry therefore falls six days before the chamber that would have to act can act, and no privileged motion or floor vote can occur before it lapses. (!) This is the last edition before the expiry DAY and the finding is stated at its sharpest: **the clock will run out with no vote, not because a vote failed but because the calendar was arranged around it.** The pro-forma characterisation this document once used is NOT revived: the published schedule lists non-legislative days and does not itself use

that phrase. No new war-powers resolution, privileged motion, discharge petition or committee action was found in this window, and no member statement on the 5 September naval exchange could be retrieved — the Senate is in recess. The Senate has voted eleven times on Iran war-powers measures in 2026; the most recent, 30 July, failed 49–50, and the prior vote of 23 July failed 47–49 on S.J.Res.180. A privileged war-powers resolution awaits a motion. Unresolved appropriations: an **\$87.6bn** supplemental, a House **\$95bn** package and a departmental request of at least **\$200bn**.

A2.3.6 · The SPR — unchanged, unrefreshed, and being misdated by secondary vendors

No new print exists. The figure stands at **286.6 mn bbl**, EIA-sourced from the Weekly Petroleum Status Report stocks table, released 2 September and **data-dated the week ending 28 AUGUST 2026**. (!) A vendor page now restates that same number as ‘as of September 2, 2026’ — which is the PUBLICATION date presented as the DATA date. It is the same figure wearing a false date, and it is the mirror of the error this document itself made when it carried the 14 August print as current. The data date is 28 August; as of today the figure is ten days stale, and that staleness is a property of the series, not a retrieval failure. The series reads 293.4 at 14 August, 289.7 at 21 August and 286.6 at 28 August: a **3.1 mn bbl** weekly draw, 6.8 mn over the fortnight, and 118.1 mn below the 404.7 of 29 August 2025, a fall of **29.2%** year on year. At 286.6 the reserve is about **40%** of its **714 mn bbl** authorised capacity. (!) The ‘lowest since’ month is still NOT asserted: the variants across outlets were November 1982, 1982–83 and December 1982, and resolving which is right needs a monthly back-series this document has not retrieved. It continues to write ‘the lowest in more than four decades’ and to drop the month, which is defensible on every variant. No cross-provider delta is computed (\$9.19). (!) The next WPSR is DELAYED to 10 September by today’s federal holiday, which also delays the EIA Monday retail series — so both fields stay dark and their absence next edition is a CALENDAR fact, not a retrieval failure (\$9.46).

A2.3.7 · Oil supply, gas and the physical balance

OPEC+ held October output **UNCHANGED** at its **6 September meeting**, keeping the total production target at **31.1 mb/d** and ending six consecutive monthly increases; the group is reported as likely to pause increases through the fourth quarter pending agreement on new baseline quotas. The September step of **+188,000 b/d**, approved on 2 August, completed the unwind of the 1.65 mb/d additional voluntary adjustments first announced in April 2023. (!) The Secretariat’s own release for the 6 September meeting could not be retrieved directly and the outcome rests on two wire reports; it is labelled accordingly rather than presented as primary. (!) The group is named as SEVEN countries in the Secretariat’s own August release — Saudi Arabia, Russia, Iraq, Kuwait, Kazakhstan, Algeria and Oman — and outlets writing ‘eight’ are not followed. **NO September IEA Oil Market Report and NO September OPEC Monthly Oil Market Report had been published at this cut**, and NO updated spare-capacity estimate exists for this window: all three are **PROSPECTIVE**, not **NOT FOUND**, and no number is supplied in their place (\$9.46). The standing IEA caveat is retained because it is the whole point of the figure: headline OPEC spare capacity is economically STRANDED unless the Strait is open, so a spare-capacity number quoted without that condition overstates available supply.

Qatari LNG remains under force majeure and the state is CONTINUING rather than new: QatarEnergy extended cargo cancellations into November on 31 August, with one European counterparty disclosing five further cancellations between late September and early November and a cumulative 29 cargoes under that single contract since April. (!) That denominator is ONE bilateral contract and is never scaled to Qatar’s book (\$9.19). No new QatarEnergy announcement was published 3–7 September — **NOT FOUND**. The structural point is unchanged: LNG carriers are specialised and scarce, Qatari LNG transits Hormuz exclusively, and there is no bypass pipeline, so unlike crude there is no reroute. That is why the LNG COMMODITY sets records while LNG FREIGHT falls on idle tonnage (A1.6). (!) A Japan/Asia LNG assessment from an independent provider for 3–7 September could NOT be obtained; the JGLA series in §1.1 is the extract’s own and is not cross-checked against a second provider this edition, which is recorded rather than glossed.

A7 · SOURCE LOG

Tier 1 = primary or official. Tier 2 = reputable wire or press. Tier 3 = state media or relayed claim, corroborated against Tier 1 before it is used for anything market-moving. **NOT OBTAINED** = sought and missed, with the method named. **PROSPECTIVE** = relates to a session or publication that had not occurred at the Singapore cut, and is not a retrieval failure (\$9.46). Every ‘used for’ below was checked against what is actually published in the two documents; an entry that supports nothing published has been deleted.

Tier	Source	Used for
1 · DATA	Tecity Bloomberg extract, ‘US Iran BBG Data.xlsx’, pulled 7 Sep. 180 rows × 99 columns; tickers read from the header scan, never hardcoded (§3)	EVERY price, yield, spread, volatility and retail-fuel figure in both documents. The 4 September close is the scoring reference; the 7 September row is intraday and moves nothing. (!) No price is taken from the web. The extract’s own row-1 description for AUTMUSAG — ‘US Average Gasoline Price’ — keeps the ‘AAA all-grades’ gloss withdrawn (A1.5)
1	US Central Command public release, 5 Sep, ‘CENTCOM Destroys 3 IRGC Oil Tankers After Iran Targets 2 U.S. Navy Warships’, plus the released strike video, read direct from centcom.mil	THE SINGLE MOST IMPORTANT TIER-1 ITEM THIS EDITION. The Iranian ballistic-missile launch at a carrier and a guided-missile destroyer and the statement that both evaded with no US personnel harmed; the three NAMED tankers and their damage assessments; and Adm. Cooper’s on-record statement — which describes three Iranian tankers taken for two US ships fired on, a three-for-two and not a one-for-one — and which DISCHARGES the ‘tanker for tanker’ DOCTRINE from TIER 2 to TIER 1 while correcting its arithmetic. The Secretary of Defense said the same in public the same day, on his own social-media account, carried by Iran International and Al Jazeera. (!) It is the FIRST CENTCOM product of this war carrying both a target list and a BDA
1	JMIC Advisory Note Update 094, issued 06/09 23:12, ICOD 051500 UTC, obtained as a primary PDF from the ukmt.o.org media path; UKMTO Advisory 127-26 (5 Sep 1338 UTC); both 2026 UKMTO listings enumerated by href	The count FROZEN at 101 with NIL new incidents and the explicit ‘no third-flag merchant incidents’ line; the three US-struck tankers logged as advisories rather than attacks; 59 NCAGS-facilitated transits for 3–5 Sep and the 0/5/1 annex figures; the CENTCOM blockade tally at 87/3/2 dated 3 September; five held vessels; threat levels unchanged, Hormuz SEVERE . (!) Also the ABSENCE, on a verbatim comparison of 092, 093 and 094: no mine danger area, no coordinates and no NAVCENT clearance sentence for a SECOND consecutive issue
1	Mohsen Rezaei, Secretary of Iran’s Supreme National Security Council, on Iranian state television, 6 Sep, carried by AP, Al Jazeera and Iran International	The announced EXCLUSION ZONE, its stated geometry from the American blockade line into the Gulf, and the sanctions-list consequence; and the claim that Hormuz passage maps are agreed with Oman and will be signed within days. (!) Used as a Tier 1 statement of IRANIAN intent; the OMAN half is a claim about a third party and is reported against Oman’s own silence, not with it
1	fm.gov.om News, Statements and Speeches pages, read direct 7 Sep; the Omani foreign minister’s own text republished by his ministry, 4 Sep	THE CENTRAL NEGATIVE, with its query stated (§9.23c): no Omani statement confirming agreed maps or an imminent signature, and no Iran, Hormuz, mediation or corridor publication since 4 September; the last Iran-related item on the statements page is the 25 August joint statement. And the positive that cuts against Tehran’s account: Oman’s own foreign minister writing on 4 September that a solution has NOT been reached

1	centcom.mil Public Releases and Press Releases indices, read direct 7 Sep; ofac.treasury.gov Recent Actions index, read direct 7 Sep; home.treasury.gov press releases	THE OTHER NEGATIVES, each with its query: CENTCOM published nothing on 2, 3, 4, 6 or 7 September and no BDA beyond the three named tankers; NO OFAC or FinCEN action on 5, 6 or 7 September, the index running 4 Sep (Iran) then 3 Sep (Cuba/Russia) then 2 Sep (Venezuela). And the POSITIVE that supersedes the last edition: the 4 September designation of a Turkish bank and two subsidiaries under EO 13902, with Iran General Licence CC
1	BLS Employment Situation for August, released 4 Sep, read direct from the news-release archive; ISM Services PMI for August, 3 Sep; BEA/Census US International Trade for July, 3 Sep; Census M3 factory orders, 2 Sep; US Treasury daily par yield curve, downloaded 7 Sep	Payrolls +162,000 , unemployment 4.1% , AHE +0.3% m/m and +3.1% y/y, and the +11,000 / +44,000 revisions; ISM Services 55.4 with Prices Paid 72.6 and Employment 47.8; the July deficit at \$88.6bn and its 29.6% year-to-date narrowing; factory orders +0.9%. (!) The Treasury CMT series is used ONLY to corroborate the SHAPE of the 4 September move; it is rounded to two decimals and is never substituted for the extract's four-decimal generics
1	fiscaldata.treasury.gov auctions API and the tentative auction schedule (the standing method under \$9.39a), queried direct 7 Sep; Treasury press release SB0607	The \$58bn 3-year (8 Sep), \$39bn 10-year reopening (9 Sep) and \$22bn 30-year reopening (10 Sep), all settling 15 Sep; the \$246bn of bills auctioning 8 September off the usual Monday; the 20-year and 10-year TIPS reopenings that follow; and that the enlarged long-end buyback regime begins 9 SEPTEMBER. (!) TreasuryDirect announcement pages return empty to a fetcher — the API is the only route that works
1	AAA Daily Fuel Gauge and its highest-recorded-average-price table, read direct 7 Sep, page stamped 'price as of 9/6/26'; AAA news release 'Labor Day On Track to Set Record at the Pump', 3 Sep; EIA Weekly Petroleum Status Report highlights	Regular \$4.1473 , mid \$4.6486 , premium \$5.0327 , diesel \$5.8970 and every week/month/year comparator; and AAA's own record table now reading diesel \$5.8970 set 6 September 2026, superseding the \$5.8159 of 19 June 2022 ; AAA's statement that the national average has never been above \$4.00 on a Labor Day and that the prior record is \$3.82 of 3 September 2012. From EIA: SPR 286.6 mn bbl for the week to 28 August, crude imports 6.8 mb/d , distillate 104.2 mn bbl and 14% below the five-year average, utilisation 98% , and that the next WPSR is delayed to 10 September
1/2	Baltic Exchange weekly report for 4 September, republished by DCN	TD3C at WS 677.22 on 3 September, +45.55 on the week, TCE just under \$704,000/day ; TD34, TD15 and TD22; and the LNG freight lines that fell — BLNG1 — \$9,000 to \$21,400/day — which is the counterintuitive result carried in A1.6
2	Kpler and LSEG via Reuters, 6–7 Sep; Windward MIOC, data-dated 3 Sep; IMF PortWatch	The ten-day moving average of 10 Hormuz transits a day, the LOWEST SINCE MAY , with 2 on Saturday and 6 on Sunday and no VLCC exit since 2 September; the Saudi products tanker that turned back on 6 September; the 22 tankers waiting off Kharg, 20 AIS-dark, with all three berths empty. (!) PortWatch has not published past 30 August and its row is labelled a week stale rather than refreshed
2	AP, Reuters, Al Jazeera, CNBC, UPI, Iran International, Washington Post/Washington Times, 4–7 Sep	OPEC+ holding October output unchanged at a 31.1 mb/d target on 6 September; the Iranian parliament speaker's 'era of proportionate responses' remark; the US Treasury Secretary's 6 September television remarks including the ~30 mn bbl characterisation, recorded as a characterisation and not a stock figure; Capt. Hawkins' denial of the drone-boat claim. (!) The 4 September reported missile attack on US targets in JORDAN is carried ONLY as UNCONFIRMED : no Jordanian statement, no Iranian claim of responsibility, and a senior US official on the record saying he is unaware of one
3	IRGC Navy Telegram, Iranian state television, Tasnim, Fars, Mehr, IRNA, 5–7 Sep	The IRGC's claim to have struck three tankers on an 'unauthorised' route plus several US-linked vessels, carried ONLY as an UNCORROBORATED claim against the frozen JMIC count and the absence of any UKMTO product. RECORDED AND NOT USED for any finding: the claim that the US carrier and destroyer 'sustained some damage and fled', which CENTCOM contradicts; and the claim to have struck a US uncrewed surface vessel, which CENTCOM's named spokesman called a lie
NOT OBTAINED	Any Kpler, Vortexa or TankerTrackers Iranian export or loading figure for 4–7 September; a Windward transit reading later than 3 September; UKMTO VRA Overview No. 5, now a week past its Friday cadence; an independent JKM/Asia LNG assessment for this window; CME FedWatch direct from cmegroup.com (the QuikStrike iframe exposes no text); initial jobless claims for the week ended 29 August at a primary source; the OPEC Secretariat's own release for the 6 September meeting	Recorded as gaps with the method named, so the reader can distinguish a fact about the world from a fact about the fetch (\$9.50). (!) A direct method for CME FedWatch is owed for a THIRD consecutive edition; the hike-odds series is therefore carried entirely from dated secondary readings, each with its date attached. (!) The 206k claims figure carried last edition is NOT repeated as confirmed
SUPERSEDED / RESOLVED	The last edition's 'no sanctions landed'; its 'tanker for tanker is one anonymous chain'; its PROSPECTIVE markers on the August employment report, JMIC 094, OPEC+ and Baltic week 36; and the week-35 TD3C figure marked UNCONFIRMED ON RE-CHECK	All SEVEN resolved this edition and are recorded as superseded rather than withdrawn, because each was true at its own cut (\$9.46). (!) The week-35 TD3C is superseded by the Baltic's own week-36 comparator of WS 631.67 for 28 August, close to but not identical with the WS623 carried, so it is retired rather than confirmed
PROSPECTIVE	The 3-year auction (8 Sep), 10-year reopening and first enlarged buyback (9 Sep), 30-year reopening (10 Sep); August CPI (11 Sep); the FOMC (15–16 Sep); the next WPSR and EIA retail print (10 Sep); JMIC Update 095; the September IEA and OPEC monthly reports; the IAEA Board resolution tabled for the week of 7 September in Vienna	Not retrieval failures. (!) ONE item has crossed OUT of this register and into NOT OBTAINED , and is recorded as such for a fifth edition: the updated tentative buyback schedule promised in SB0607 on 19 August, for a regime that begins in two days, is still absent and is a failure to publish rather than a prospective item

A8 · ON-DEMAND UPDATE PROTOCOL

#	Step	Detail
1	Refresh and verify the extract	Never build an edition off a stale extract (\$9.22). Check the file mtime AND parse the sheet. This edition: the extract carries a 7 September row against the 4 September row the last edition ran on, and the 4 September row has settled into a genuine close on all fourteen scored fields. It is fresh.
2	Parse with a dynamic header scan	Column indices move between uploads. Auto-detect the Brent and WTI front month and take whatever label the header scan returns for DXY. Re-verify the 27 February anchor field by field — done this edition, unchanged on all seventeen fields listed at A10.1, and on SOFR at 3.68. (!) Read the DESCRIPTION row, not just the ticker row: doing so is what exposed that AUTMUSAG is labelled 'US Average Gasoline Price' and not 'AAA all-grades' (A1.5, \$9.57). A ticker map is not a definition.
3	Run all THREE integrity checks	Row-level (\$9.8), field-level identical-value at the precision each series is published to (\$9.35, \$9.48), and the continuation-versus-active BASIS check (\$9.41). This edition: \$9.8 and \$9.41 CLEAR ; \$9.35 FIRES on SIX fields at once on the 7 September row, with a known and benign cause — US Labor Day, the cash bond market shut — and the remedy applied regardless of cause. (!) It also fires on the unscored 20-year across THREE consecutive rows, which is recorded even though nothing depends on it: a field-level test run only on the fields one cares about is not a test.
4	Run the backfill check in BOTH directions	\$9.10: yesterday's dark cells must be re-examined, not carried, and a backfill is as likely to run against a trend as with it. This edition it fired on TWO cells, both for 3 September and both UPWARD: AUTMUSAG to \$4.92 , two cents above the value carried and the highest since 29 May though NOT a war high , WIDENING the political distance to 32 cents ; and SOFR to 3.66, resolving the non-backfill the last edition recorded. The test has now fired UPWARD on the scored gasoline series in FIVE consecutive editions — \$4.83, \$4.86, \$4.90, \$4.92 — against a downgrade case that was live a fortnight ago.
5	Compute deltas and test every trigger	d/d, w/w five rows back, and versus pre-war; explicit trigger tests for the four market channels plus Stage-4 A, B and C. Run min, max and last-prior-occurrence on the full column before writing ANY superlative (\$9.32). This edition that discipline established that \$2.68 is the nearest reading since 21 August and NOT of the war; that Threshold B's six-close run IS the longest of the regime; that Henry Hub's discount is the smallest since 8 July; and — the correction — that the count of active-contract closes above \$95 published last edition was one too high.
6	Verify the news, and re-verify what was inherited	Every claim needs a named source and an exact date, and negative claims decay fastest of all (\$9.23). State the exact query behind every negative. Say NOT OBTAINED rather than estimating, and distinguish it from PROSPECTIVE (\$9.46). (!) This edition the discipline paid in the other direction: the last edition's 'no sanctions landed' and 'tanker for tanker is one anonymous chain' were both true at their cut and both were overtaken within hours, so they are SUPERSEDED rather than withdrawn. A negative that expires is not a negative that was wrong, and the two are recorded differently.
7	Build, then QA in three passes	A numeric harness against the dataframe; a STYLE harness measuring bold ratio and headline length (\$9.52, \$9.55); an adversarial PROSE pass by reviewers with no access to the source data, run as TWO reviewers CONCURRENTLY against the same pre-fix text and merged into one patch (\$9.42); and a VISUAL render, which is not optional (\$9.43). Re-run the numeric and style harnesses AFTER the prose fixes. Balance the bold tags in every fragment after every edit (\$9.42a). Check the page budget at build time, not after the prose is final (\$5A).
8	Deliver both documents	The edition and the annex go into the project root together. A file that is not committed never reaches the reader. The annex does not go into the dashboard PDF folder, because the score-history script regexes a score sentence out of every PDF there and the annex has none. Then snapshot the fragments under a date-stamped name, at the END of the run, so no edition can overwrite another's sources.

A9 · METHODOLOGY

Six channels, each scored 0–5, summed to 0–30. Bands: 0–7 watch; 8–14 stress; 15–21 systemic-risk watch; 22–30 crisis. Maritime denial and escalation risk are event channels; oil, US inflation impulse, Treasury stress and political stress are market channels scored on confirmed closes.

(a) Confirmed closes only for market channels. No market channel moves on an intraday print. The 7 September snapshot in this document moves nothing — including an active-contract mark of **\$96.69** that is through the trigger level, and a TTF mark of **€74.855** that is ABOVE the war-record CLOSE and is not reported as a record. (b) **Hysteresis, and it is now being tested from the other side.** Upgrades fire on a sustained break; downgrades require a sustained reversal past a wider threshold. The 5y5y forward closed BELOW its own firing level on 28 and 31 August and two editions came under pressure to redefine the downgrade to meet it; the rule was NOT moved, and the forward has closed ABOVE the level on 1, 2, 3 and 4 September. (!) But the margin has **NARROWED to 0.82 bp**, the tightest of the four, and a margin inside one session's typical move is not clearance. The rule is not rewritten now that it is thin, for the same reason it was not rewritten when it was broken (\$9.16, \$9.26). (c) The scale saturates in BOTH directions (\$9.7, \$9.27). FIVE of six channels are at the cap, so the score could not register the first Iranian ballistic-missile attack on US capital ships, the first CENTCOM release of the war carrying both a target list and a battle damage assessment, an Iranian exclusion zone announced with no Omani counterparty text, Hormuz traffic at its lowest since May, or US retail diesel taking an **all-time record** that predates this war by four years. Nor could it register what cut the other way — no American strike on Iranian territory for a sixth day, no Iranian attack on any Gulf state since 3 September, and Treasury volatility below its pre-war anchor. A flat 27 is an instrument at its stop.

Rules exercised this edition, named so the reader can audit them. **\$9.8 and \$9.41 CLEAR**; **\$9.35 FIRES on six fields** (A1.1), and the reasoning for extending the unresolved treatment to BE10 and the 5y5y — which did move — is stated rather than assumed, because a derived generic cannot settle on a closed cash market either. \$9.10 — the two-way backfill test, fired on TWO cells, both upward, and has now fired upward on the scored gasoline series in FIVE consecutive editions. **\$9.11 — an announcement is not an event, applied symmetrically: Iran's announced exclusion zone moved NO channel, because it has no coordinates, no effective date and no counterparty text; and the parliament speaker's 'era of proportionate responses' remark moved none either.** \$9.13 — a prior event is never reused for a later one, and this edition it mattered twice: the 4 September reported attack on US targets in Jordan is **UNCONFIRMED** and is kept wholly apart from the 31 August and 1 September Jordan events; and any Kuwaiti ordnance count encountered in search results belongs to a July attack, not to 3 September, so none is carried. \$9.15 — both Treasury legs are computed and compared, not the satisfied one alone: the volatility leg is satisfied a second session while the yield leg fails by **24.23 bp** and has not been within 15 since 28 July. \$9.18 — a single sub-threshold close is a session; two is the start of a run and NOT a regime, this regime's longest run being nine closes, ended in one session, against a war-long maximum of twenty-one that belongs to a different regime (\$9.32). \$9.19 and \$9.24 — every denominator

named, none spliced or averaged: the 59 facilitated and the 6 non-facilitated that sit inside a single JMIC document, the 85/day and 138/day baselines, the three retail fuel series, and the two Fed-pricing venues over different horizons. \$9.23 — every negative names the page checked, the method and the date range, and the central negative this edition is Oman's silence on a claim Tehran made about Oman. \$9.26 — engaged on TWO channels at once again: squarely on oil, where it forbids resolving \$9.56 toward whichever Brent series would fire the upgrade; and on inflation, where it now forbids the reverse move of tightening the rule as the margin thins. \$9.30 — the scored gasoline series backfilled UP for a fifth consecutive edition and is dark for two sessions after; no trend is read through the gap. \$9.31 — the snapshot missed the whole US session, but NOT in one direction: ten of fourteen fields settled above the mark and four below, and the shape is the payrolls reaction rather than a drift. \$9.32 — every superlative bounded and checked against the full column BEFORE writing, which produced one **CORRECTION** to an inherited count. \$9.36 and \$9.41 — both oil bases quoted, no d/d constructed across the roll. \$9.37 — ENGAGED: the entire 7 September rates block is a carry, so no reconciliation gap may ever be computed against it. \$9.39 and \$9.40 — Threshold A untestable as written, no tail asserted, and three auction legs land within four days. \$9.43 — a visual render was run before delivery. \$9.46 — the 8–10 September auctions, the 9 September buyback, 11 September CPI, the FOMC and the September IEA and OPEC monthlies are **PROSPECTIVE** and are kept out of the **NOT OBTAINED** register. \$9.50 — re-applied on CME FedWatch, which owes a further method for a THIRD consecutive edition.

\$9.56 — NOW THREE CLOSES OLD, AND THE LAST DEFENCE OF THE STATUS QUO HAS GONE. A trigger written on a continuation series stops being well-defined the moment the basis opens, and the failure is silent. The oil channel's upgrade is 'Brent above \$95 sustained'. That rule was written and applied through long stretches in which CO2 and COA printed the SAME NUMBER — most recently exactly zero for twenty consecutive sessions to 28 August. Earlier rolls opened a basis too; what is new is a roll that opened one STRADDLING the trigger. Brent rolled on 31 August and the basis has widened on every session since: 2.12, 3.08, 3.54, 3.89, 3.96. On the 4 September close the trigger falls BETWEEN the two series for a **THIRD** consecutive session: the scored continuation is **\$2.68** below it and the active contract **\$1.28 ABOVE** it. 'Sustained' has a settled operational meaning here — two consecutive confirmed closes, the test that fired US-inflation 4→5 on 31 July and cut oil 2→1 on 3 July. The active contract has now closed above **\$95** THREE times in succession, so on that series the upgrade condition is met in full and has been since the 3 September close. **(!) THE MATERIAL CHANGE THIS EDITION IS THAT THE TWO SERIES NOW POINT THE SAME WAY.** On 3 September the scored series moved AWAY while the active stayed through, and that divergence was a real reason to hold calmly. On 4 September both rose and the scored gap NARROWED to its nearest reading since 21 August. **The hold now rests on nothing except which series the rule happens to be written on, and that is stated plainly rather than dressed up.** Three things follow and all three remain the practice. (a) The channel is held on the scored continuation, and the alternative reading is published in the EDITION rather than buried here, because a reader checking a screen quote for 'Brent' will find the active contract. (b) The rule is NOT moved to whichever series would fire it — the \$9.26 discipline. (c) The problem is disclosed as an open methodological question and NOT decided under the pressure of a fired trigger, which is the \$9.16 precedent. **The general form, which will recur: any threshold expressed as an absolute level on a rolling series has an undefined region as wide as the basis, and the basis is zero exactly when nobody is looking at it.**

\$9.51 — CARRIED FORWARD, UNCHANGED AND UNSETTLED, and now six observations deep. When a defective test is met a second time by a different mechanism, record the MECHANISM, not a verdict. \$9.49 recorded Threshold B's 28 August arming as a defect: a long-end stress test tripped by an **11.14 bp** front-end move in which the 30-year contributed **1.25 bp**. On 31 August B held on a bear STEEPENER in which the 30-year contributed the largest move on the curve; on 1 September on a bear FLATTENER in which it contributed the smallest; on 2 and 3 September on a **BULL STEEPENER** twice; and on 4 September on a bear flattener again, in which the 30-year was the ONLY tenor to FALL. **(!) The written test has now returned the same answer through three of the four configurations available, in both directions, and on the latest occasion it was satisfied while its own long-end leg moved TOWARD the threshold, the margin narrowing 4.65 to 4.23 bp — the test held open by the leg it was not written about. That is not ambiguity observed twice but six times, and it strengthens rather than resolves the original complaint. (!) A second observation sharpens it further, and it is new this edition: the two legs DIVERGED for the first time in the run — the 30-year margin narrowed a third consecutive close to **4.23 bp** while the 10-year's WIDENED to **13.21 bp** — so a single test is now being held open by the leg it was not written about. The open question is unchanged and is not settled here: whether B should be conditioned on a long-end CONTRIBUTION rather than a long-end LEVEL.**

\$9.57 — CARRIED FORWARD FROM LAST EDITION, UNRESOLVED. **A TICKER MAP IS NOT A DEFINITION, AND A SERIES DESCRIPTION IS AN INHERITED CLAIM LIKE ANY OTHER.** This document captioned AUTMUSAG as 'AAA all-grades retail pump' for months, in the tape, the chart, the methodology and the score grid, and scores an entire channel on it against a **\$3.52** anchor and a **\$4.75** trigger. The extract's own description row says only 'US Average Gasoline Price'. **(!) The chart legend in \$1.4 has been CORRECTED to the vendor's own label this edition — the last place the withdrawn gloss survived. The four rules stand. (a) Re-verify a series DESCRIPTION on the same schedule as an inherited news claim (\$9.13, \$9.23). (b) The failure of a description does NOT impugn the series — AUTMUSAG is continuous, pre-dates the war, and has a stable structural spread to the DOE regular series, a war-long mean of 65.6c in a range of 51.6c to 75.9c on dates where BOTH resolved. (c) DO NOT RE-BASE A SCORED SERIES ON THE EDITION THAT DISCOVERS ITS LABEL IS WRONG (\$9.21, \$9.56b). (d) Publish the irreconcilable numbers side by side with their denominators named (\$9.19) and keep the reconciliation open. (!) It could NOT be advanced this edition: the DOE corroboration series is dark for a second week because the 7 September survey falls on a federal holiday, so the two series cannot be differenced on any recent date.**

\$9.58 — NEW. **A KNOWN AND BENIGN CAUSE DOES NOT EARN AN EXEMPTION FROM AN INTEGRITY RULE.** On the 7 September row six rate fields are identical to four decimal places to their 4 September closes, and the cause is not mysterious: US markets are shut for Labor Day. The tempting move is to say the check has not really fired — that a holiday carry is a different object from a vendor failing to write a value — and to report the fields as unchanged rather than unresolved. **That move is refused, and the reason is that \$9.35 exists precisely because a carry and a genuine unchanged print are INDISTINGUISHABLE IN THE CELL.** A holiday explains why this particular carry occurred; it does not make the cell say anything it did not say before, and on 17 August a confident explanation of an identical 30-year print concealed a new war high. Three rules. (a) Apply the remedy on the cell's evidence, not on the analyst's theory of the cell — unresolved, no d/d, no reconciliation entry (\$9.37). (b) **Publish the cause anyway**, because a reader is owed the difference between a market that is shut and an extract that has failed, and because it tells the reader something useful: there will be NO 7 September close for these fields at all, and the next day-on-day comparison runs 4→8 September. (c) Extend the treatment to any field on the same row whose settlement depends on the same closed market, even where the value DID move — here BE10 and the 5y5y, which differ by fractions of a basis point and cannot have settled either. The cost of under-claiming for one session is nothing; the cost of over-claiming is a published record.

Restatements and comparability. Vendor restatements are normal and make absolute levels non-comparable across editions, though directional analysis is continuous. A contract roll does the same thing to a continuation series silently, which is why the basis check is a standing check. The dual gasoline series is never re-based: AUTMUSAG is the scored reference and preserves the **\$3.52** anchor and the **\$4.75** trigger; USRFRUSA is corroboration only; AAA's published headline is a third series and is never compared with either. The pre-war anchor is the 27 February 2026 close, re-verified field by field every edition; it is unchanged to date. **FOUR OPEN ITEMS REMAIN DISCLOSED RATHER THAN DECIDED. (1) FIRST IN LINE AND SHARPER THAN LAST EDITION: \$9.56**, the oil trigger's ambiguity across the roll — **\$2.68** below on the scored series and **\$1.28** through on the active one, with three consecutive closes through on the active series and, for the first time, both series moving the same way. (2) Threshold B's long-end LEVEL versus long-end CONTRIBUTION question, per \$9.49 and \$9.51, now six observations deep with diverging legs and a narrowing 30-year margin. (3) \$9.57, the reconciliation of the scored gasoline series to any published construction, open and un-advanceable this edition. (4) The US-inflation channel's firing-versus-downgrade gap, no longer dormant: the firing trigger has held four closes but the margin has narrowed to **0.82 bp** while the downgrade sits **16.62 bp** lower. The oil channel's own separate asymmetry stands unchanged: its downgrade is written as a mediated pause AND 'a close' at or below **\$72.48** while its upgrade requires a SUSTAINED break, which as written makes the downgrade's PRICE limb easier to trip than the upgrade's, though the downgrade also requires a mediated pause and is not therefore the easier test overall. It is **\$19.84** away and not live.

A10 · ANCHOR AND TRIGGER LEVELS

A10.1 · Pre-war anchor — 27 February 2026 close, re-verified this edition field by field, unchanged

Brent	WTI	2Y	5Y	10Y	30Y	2s10s	5y5y	10y BE	MOV E	VIX	DXY	Gasoline scored	Gasoline DOE	Henry Hub	TTF	Asia LNG
\$72.48	\$67.02	3.3749 %	3.5017 %	3.9375 %	4.6106 %	+55.64 bp	2.142 %	2.2569 %	73.38	19.86	97.608	\$3.52	~\$2.94	\$3.063	€31.23	¥1,669

A10.2 · Live trigger state on the 4 September close, with events to 7 September

Channel	Score	Upgrade	Downgrade	Distance
Maritime denial	5	At max	Verified reopening AND traffic above 25% of normal for 10 sessions	NEITHER leg advanced; both moved the wrong way. JMIC 094 issued (ICOD 051500Z): confirmed-incident count FROZEN at 101 , NIL since 093, Hormuz SEVERE , threat levels unchanged, five vessels still held. The traffic leg gives four answers again: JMIC's own annex has 0, 5 and 1 non-facilitated across 3–5 Sep against 59 US NCAGS-facilitated over the 3–5 Sep 48 hours in the SAME document; Kpler has a ten-day average of 10/day on 6 Sep, the LOWEST SINCE MAY ; PortWatch's own baseline is 85/day and JMIC's is ~138/day. (!) On no denominator does traffic clear 25% of normal — the nearest reading of the war remains UKMTO VRA's 22– 23% to 27 August — so the leg fails on every basis. Blockade tally 87/3/2 , CENTCOM-dated 3 September
Oil price shock	2	Brent above \$95 sustained → 3	Mediated pause AND a close at or below \$72.48 → 1	\$2.68 below the upgrade on the scored CO2 close of \$92.32 , NARROWED from \$3.37 — the FOURTEENTH reading and the NEAREST since the 21 August close left \$2.33 . (!) The ACTIVE contract closed \$96.28 , a THIRD consecutive close through the level and the highest active close since 26 May, so on THAT series the upgrade condition is MET as written and has been for three sessions. \$9.56 is at its sharpest; the rule is NOT moved (\$9.26, \$9.56b) and the channel is held on the scored continuation, which has not closed above \$95 since 24 July. Bounded: TWENTY-SIX such COA closes in the war — the last edition's twenty-six through 3 September is CORRECTED to twenty-five — and this is the first run of three since 20–22 May. Downgrade \$19.84 away
US inflation impulse	5	At max — fired 4→5 on 31 Jul on a sustained break of 2.30%	5y5y sustained at or below the 2.142% anchor → 4	16.62 bp above the anchor, NARROWED from 17.34. The firing trigger HELD above 2.30% for a FOURTH close at 2.3082% but by the NARROWEST margin of the four — 0.82 bp , against 1.10, 0.96 and 1.54 — a margin inside a single session's typical move and reported as such rather than as clearance. (!) \$9.26 has paid TWICE already and the rule is not rewritten to the firing level now that the margin is thin. BE10 9.63 bp above its own anchor, narrowed from 9.70, and it FELL against a RISING nominal, so the whole rise is real yield

Channel	Score	Upgrade	Downgrade	Distance
Treasury stress	5	At max	30-year close below 5.00% WITH MOVE below 75, sustained → 4	(!) THE VOLATILITY LEG IS SATISFIED A SECOND SESSION — MOVE 73.10, -1.58, and the first close BELOW the 73.38 pre-war anchor since 28 August. The last edition's watchlist asked whether one sub-75 close would become two; it did. Yield leg fails by 24.23 bp , narrowed from 24.65. (!) \$9.18 is NOT discharged by two closes: the longest sub-75 run of the CURRENT REGIME is NINE closes, 18–28 August, ended in a single session on 31 August, and the war's longest is TWENTY-ONE, 10 June–10 July (\$9.32); the leg was satisfied and given back inside one session on 5 and on 7 August. The yield leg has not been within 15 bp of its condition since 28 July, nor closed below 5.00% since 6 July. (!) The August anomaly is BACK: volatility 0.28 BELOW its anchor while the 30-year sits 63.17 bp ABOVE its own
Political stress	5	At max — fired on a sustained break of \$4.75	Three consecutive AUTMUSAG closes at or below \$4.60 with no intervening print above \$4.70 → 4	32 cents above the condition and moving AWAY for a FOURTH edition. AUTMUSAG BACKFILLED UP to \$4.92 for 3 September — a FIFTH consecutive rise and the highest print since 29 May, expressly NOT a war high (\$5.18 , 20 May) — then dark on 4 and 7 September and NOT extrapolated (\$9.30). It is also 17 cents above the \$4.75 that fired the upgrade, so neither the downgrade nor a reversal of the upgrade is in prospect. (!) The transmission this window is in AAA DIESEL, which TOOK its all-time record on 4 September and is not the scored series (A1.5). The \$3.52 anchor and the trigger levels are UNCHANGED and the series is NOT re-based
Escalation risk	5	At max	Mediated stand-down AND talks resume → 4, or 3 if a reopening is verified	Moved AWAY on the naval half and stood still on the diplomatic one. (!) Iran fired BALLISTIC MISSILES AT TWO US NAVY WARSHIPS on 5 September — CENTCOM's own release, a carrier and a guided-missile destroyer, both evading — and the US destroyed THREE Iranian tankers in reply, each named with a damage assessment. 'Tanker for tanker' is DISCHARGED from TIER 2 to TIER 1 . Against that: NO US strike on Iranian territory for a sixth day and NO Iranian attack on any Gulf state after 3 September. Iran will declare an exclusion zone unilaterally and says Hormuz maps are agreed with Oman; NO Omani statement confirming it on a direct check of fm.gov.om, whose last Iran-related item is 25 August. NO talks scheduled by any party; Washington's precondition is unchanged

A10.3 • Stage-4 thresholds — levels and live margins

	Level	State on the 4 September close	Margin
A	A coupon auction clearing with a tail above the 1pm when-issued level	NOT ARMED — UNTESTABLE AS WRITTEN (\$9.39), because Treasury publishes no when-issued level. No coupon auction cleared in the window. The 13 May 30-year stop of 5.050% is a historical marker only; the US has since term-funded at 5.216% (13 Aug). (!) THE TEST IS IMMINENT ON THREE LEGS IN THREE DAYS: a \$58bn 3-year (8 Sep), a \$39bn 10-year reopening (9 Sep) and a \$22bn 30-year reopening (10 Sep), all settling 15 September — \$119bn on FOMC day one — with \$246bn of bills also auctioning on 8 September, shifted off Monday by the federal holiday. NO trend is read against August's \$25bn : reopening vs new issue (\$9.40). Read the allotment composition, never an unsourceable tail (\$9.29, \$9.39)	30-year 19.23 bp above the 13 May stop, from 19.65
B	30-year above 5.20% WITH 10-year above 4.65%	ARMED — a SIXTH consecutive close, extending the longest armed run of the regime. Ordinals UNCHANGED and this is NOT a new state: six armings, five lapses, ELEVEN states and TEN changes since 29 July. (!) THE LEGS DIVERGED FOR THE FIRST TIME IN THE RUN — the 30-year margin narrowed a THIRD consecutive close while the 10-year's WIDENED after two narrowings. That is the bear flattener passing through the test. \$9.49 stays OPEN and is STRENGTHENED: it is now six observations deep, and B has been satisfied across six closes spanning THREE distinct curve shapes — bear flattener three times, bear steepener once and bull steepener twice, which is three of the four configurations available	30-year clears by +4.23 bp (from 4.65, from 5.71); 10-year by +13.21 bp (from 11.80, from 12.80)
C	MOVE above 130	NOT ARMED , and further away. 73.10 is a SECOND consecutive close below 75 and the first below the pre-war anchor since 28 August, so the Treasury downgrade's volatility leg is satisfied a second session. (!) The two anchor deviations are reported SEPARATELY and no composite is constructed (retired 1 Sep): they are now on OPPOSITE sides of their anchors for the first time since 28 August — volatility BELOW its own, the 30-year far ABOVE its own — which is the August anomaly of a fully normalised expectation of movement around a yield that has not normalised at all	56.90 below C; 41.92 below the 115.02 war high . MOVE -0.28 vs its 73.38 anchor; 30-year +63.17 bp vs its own
