

HEADLINE JUDGMENT

Score HOLDS at 27/30 for a twentieth consecutive edition. No channel moved. One. The war became navy-on-navy, and for the FIRST time in this war CENTCOM published a target list with a battle damage assessment. Iran fired ballistic missiles at **TWO US Navy warships** — a carrier and a guided-missile destroyer — on 5 September; CENTCOM says both evaded and no American was harmed. It then destroyed **THREE** Iranian tankers and NAMED them with damage assessments: *Downy* off Kharg and *Stark 1* near Jask permanently disabled, *Kylo* ‘completely destroyed’, which JMIC 094 logs as sunk. **‘Tanker for tanker’, carried here for two editions as ONE anonymous sourcing chain at TIER 2, is now the theatre commander’s own stated policy on the record — the caveat is DISCHARGED in the direction of confirmation.** Iran’s answer is not: its claim to have struck three tankers is **UNCORROBORATED** — JMIC 094 records NIL new incidents, the count is frozen at **101**, no vessel is named, no UKMTO product corroborates it, and CENTCOM called the separate drone-boat claim a lie. (!) 094’s cut-off is 051500Z, so it is SILENT on 6 September. Two. The oil trigger took a **THIRD** close. The ACTIVE contract closed **\$96.28** on 4 September after **\$95.63** and **\$95.52** — its highest close since 26 May — while the SCORED continuation closed **\$92.32**, **\$2.68** below **\$95** and **NARROWED** from **\$3.37**, the nearest since 21 August. Three consecutive closes is past any reading of sustained. **The rule is written on the continuation and is NOT moved to the series that would fire it (\$9.26, \$9.56b).** Oil holds at 2/5 and the other reading is published, not suppressed. Three. Iran began writing the geometry alone. Its security-council secretary said on 6 September that Iran will declare an exclusion zone running from the American blockade line into the Gulf, with entrants added to its own sanctions list, and that Hormuz maps are agreed with Oman and will be signed. **OMAN HAS PUBLISHED NOTHING CONFIRMING IT.** fm.gov.om read direct: nothing dated 5–7 September, and the last item on its statements page is the 25 August joint statement; and Oman’s foreign minister wrote on 4 September that no solution has been reached. A bilateral instrument carrying one signatory’s text is the 26 August failure repeating. Four, and it is the pump. **US retail diesel TOOK ITS ALL-TIME RECORD** — AAA **\$5.85** on 4 September, through the **\$5.8159** of 19 June 2022, and reset again on 5 and 6 September, to **\$5.8819** and **\$5.8970**. The last edition put it 3.27 cents away. It is the FIRST US retail fuel price to exceed a pre-war all-time high in this war, and the political channel cannot see it. August payrolls printed **+162,000** against a ~53,000 consensus with **+55,000** of upward revisions; the curve answered with a **BEAR FLATTENER** and September hike odds went 48.4% to **58.4%** on one venue’s series. **MOVE 73.10**, a **SECOND** sub-75 close and below its own pre-war anchor. Sequencing 27 → 27 → 27 → 27 → 27.

1 · LIVE TAPE

Scoring reference is the 4 September close (Fri); the 7 September row is a Singapore-MORNING mark and moves no channel (A9a). (!) **7 SEPTEMBER IS US LABOR DAY AND THE US CASH BOND MARKET IS SHUT, so there will be no 7 September close for any rate field at all** — the next is 8 September and the next d/d runs 4→8 Sep. **\$9.35 FIRES on the 7 September row and the whole rates block is carried UNRESOLVED: the 2-, 5-, 10-, 20- and 30-year and the 2s10s are identical to four decimal places to the 4 September close.** BE10 and the 5y5y differ by fractions of a basis point, but a derived generic cannot settle on a closed cash market either, so no d/d is asserted for any of the eight and none enters a reconciliation (\$9.37). **\$9.8 CLEARS** on fourteen of fourteen scored fields for the 4 September row; \$9.35 also fires on the UNSCORED 20-year, which has printed 5.2469 on THREE consecutive rows. **\$9.41 CLEARS.** Every row carries the Bloomberg ticker it is drawn from, from the extract’s own header scan (\$9.4). No SCORED price here is taken from the web. Trigger notes are compressed; full commentary is in ANNEX A1.

1.1 · Energy

Series	BBG ticker	2 Sep	3 Sep	4 Sep close	7 Sep mark	Trigger note
Brent, front-month listed — scored	CO2 Comdty	92.09	91.63	92.32	92.72	+\$0.69. \$2.68 from the \$95 upgrade, NARROWED from \$3.37 — the fourteenth reading and the NEAREST since the 21 August close left \$2.33. \$19.84 above the \$72.48 downgrade. The scored rule is written on THIS series, which has NOT closed above \$95 since 24 July
Brent, active contract	COA Comdty	95.63	95.52	96.28	96.69	(!) A THIRD CONSECUTIVE CLOSE THROUGH \$95 , and the HIGHEST active close since 26 May (\$96.67). Three closes is past any reading of sustained; on THIS series the upgrade condition is MET as written, and the rule is still not moved (\$9.56b). TWENTY-SIX such closes in the war — (!) the last edition’s twenty-six for the count through 3 September was one too high and is CORRECTED to twenty-five. Basis 3.54, 3.89, 3.96. See \$2.1
WTI, front-month listed — scored	CL2 Comdty	88.28	88.03	88.57	88.96	+\$0.54 , the highest since 10 June. NO trigger is written on WTI; corroboration only
WTI, active contract	CLA Comdty	91.01	91.30	91.48	91.95	+\$0.18 — it rose LESS than its own continuation, so this basis NARROWED to 2.91 from 3.27 while Brent’s WIDENED . (!) Two contracts, two directions in one session: an argument against reading either basis as a market signal
Henry Hub natural gas	NGA Comdty	2.956	2.913	2.975	2.929	+\$0.062. 2.87% below its \$3.063 anchor, NARROWED from 4.90% — the SMALLEST discount since 8 July, the last session it closed ABOVE the anchor. The control holds, but only just
Dutch TTF natural gas	TZTA Comdty	73.634	71.810	71.952	74.855	+€0.142 , the THIRD-highest close of the war; €73.634 of 2 September STANDS as the war-record close. +130.4% vs pre-war. (!) The 7 Sep MARK of €74.855 is ABOVE that record but is a MARK , not a close, and nothing is claimed on it (A9a) — the same applies to the Henry Hub mark of 2.929, which would put that discount back near 4.4%. A three-year high, NOT an all-time high
Japan/Asia LNG	JGLA Comdty	3,944	3,960	3,929	no print	–31, the first fall in three. NOT a record: the TWELFTH war-record close of 3,960 (3 Sep) STANDS. +135.4% vs pre-war, the largest multiple on the tape. No 7 Sep print

1.2 · US Treasuries and inflation expectations

Levels in per cent; d/d in basis points, on the 4 September close. A **BEAR FLATTENER**: the front and belly UP **3.01** and **3.04 bp**, the 10-year up 1.41 and the 30-year DOWN 0.42 — the payrolls signature. (!) It is NOT monotonic with tenor: the 5-year rose 0.03 bp MORE than the 2-year, and that is stated rather than smoothed. (!) The 7 September column is a MARK on a market that is CLOSED for Labor Day; every rate field is carried **UNRESOLVED** under \$9.35 and no d/d is computed against it. No trigger is written on the 2-year or the 5-year (\$2.1, A10.2).

Tenor	BBG ticker	2 Sep	3 Sep	4 Sep close	7 Sep mark	d/d, bp	Trigger note
2-year	USGG2YR Index	4.3690	4.3360	4.3661	unresolved	+3.01	UPWARD, recovering 91% of the previous session's 3.30 bp fall in one. The 4.3998 war high STANDS by 3.37 bp. NO trigger here
5-year	USGG5YR Index	4.5339	4.5144	4.5448	unresolved	+3.04	The largest rise on the curve. 4.5551 stands as the war high by 1.03 bp. NO trigger here
10-year	USGG10YR Index	4.7780	4.7680	4.7821	unresolved	+1.41	Less than half the front-end move. 4.7981 stands, by 1.60 bp. SATISFIES Threshold B's 4.65% leg by 13.21 bp , WIDENED from 11.80 — the first widening in three closes. (!) BE10 FELL 0.07 while the nominal rose 1.41, so the whole rise and more is REAL yield
30-year	USGG30YR Index	5.2571	5.2465	5.2423	unresolved	-0.42	The ONLY tenor to fall, and a third consecutive fall. CLEARs Threshold B's 5.20% by 4.23 bp , NARROWED from 4.65 — a third consecutive narrowing. The Treasury downgrade's yield leg fails by 24.23 bp , narrowed from 24.65; it has not been within 15 bp since 28 July and has not closed below 5.00% since 6 July. (!) It narrowed on a session that priced a HIKE: the long end fell because the front end rose
2s10s spread	USYC2Y10 Index	40.700	42.788	41.394	unresolved	-1.394	A FLATTENING, corroborating the shape INDEPENDENTLY after two steepening sessions. 14.246 bp flatter than the 55.64 anchor. (!) A SEPARATE series, not a difference of the generics
10-year breakeven	USGGBE10 Index	2.3488	2.3539	2.3532	unresolved	-0.07	(!) FELL against a RISING nominal — the mirror of 3 Sep, so the whole rise is REAL yield. 9.63 bp above its 2.2569 anchor. It and the 5y5y moved together a second session (\$9.54)
5y5y forward breakeven	USGG5Y5Y Index	2.3096	2.3154	2.3082	unresolved	-0.72	(!) HOLDS ABOVE the 2.30% firing level for a FOURTH consecutive close, but by the NARROWEST margin of the four — 0.82 bp , against 1.10, 0.96 and 1.54. The margin is inside a single session's typical move. 16.62 bp above the 2.142% downgrade anchor

1.3 · Cross-asset

Series	BBG ticker	3 Sep	4 Sep close	vs pre-war	Note
Treasury volatility (MOVE)	MOVE Index	74.68	73.10	-0.28 vs 73.38	-1.58, a SECOND CONSECUTIVE CLOSE BELOW 75, and the first close BELOW the pre-war anchor since 28 August. The Treasury volatility downgrade leg is SATISFIED for a second session — the last edition's own watchlist question, answered YES. (!) \$9.18 still binds: the longest sub-75 run SINCE THE CURRENT REGIME BEGAN on 29 July is nine closes, 18–28 August, and it ended in one session; the war's longest is twenty-one, 10 June–10 July (\$9.32). No 7 Sep print
Equity volatility (VIX)	VIX Index	14.32	14.53	-5.33 vs 19.86	+0.21, off a 14.32 that came within 0.07 of the 14.25 war low (14 Aug). Still priced as though this war had ended. No 7 Sep print
US dollar index	DXY Index	98.908	99.176	+1.57 vs 97.608	+0.268, recovering a third of the previous fall, on payrolls. (!) The label resolves as DXI Index, never hardcoded (\$9.4)
SOFR overnight rate	SOFRRATE Index	3.66	no print	-0.02 vs 3.68	(!) BACKFILLED to 3.66 for 3 Sep, reported dark last edition; dark again 4 and 7 Sep. No trigger here
Gasoline, retail pump — scored	AUTMUSAG Index	4.92	no print	+1.40 vs 3.52	(!) BACKFILLED UP to \$4.92 for 3 September, which the last edition reported dark — a FIFTH consecutive rise and the HIGHEST since 29 May; the war high is \$5.18 (20 May) and this is expressly NOT one. 32 cents above the \$4.60 downgrade condition and 17 above the \$4.75 that fired the upgrade, moving AWAY for a fourth edition (\$9.30). Dark on 4 and 7 September and NOT extrapolated
Gasoline, DOE regular retail spot — corroboration	USRFRUSA Index	no print	no print	+1.13 vs ~2.94	Weekly, surveyed Monday; last resolved 31 Aug at \$4.071 . The 7 Sep survey falls on the federal holiday and the release is delayed to 10 Sep, so this stays dark a second week

(!) THE RECORD FELL. The last edition put AAA diesel **3.27 cents** below its **all-time record** of **\$5.8159**, set 19 June 2022. It took the record the next day. AAA's national average printed **\$5.85** on 4 September, and AAA's own highest-recorded-price table, read direct on 7 September, now reads **\$5.8970** set 6 September 2026 — the 2022 figure is no longer displayed. Three consecutive days, three records: **\$5.85**, **\$5.8819**, **\$5.8970**. This is the first US retail fuel price to exceed a pre-war all-time high in this war, and it is a fuel the score cannot see. Gasoline did not follow: AAA regular **\$4.1473** against its own **\$5.0165** record of 14 June 2022, **+6.86c** on the week to diesel's **+29.35c** — more than four times the pace, a second consecutive edition. AAA's 3 September release said the holiday was 'on track to' put the national average above **\$4.00** on a Labor Day for the first time, the prior record being **\$3.82** of 3 September 2012; at **\$4.1473** it is above that level, and no AAA release confirming the completed record was found — **NOT FOUND**. (!) THE THREE RETAIL SERIES ARE STILL NEVER COMPARED (\$9.19): AUTMUSAG (scored) last RESOLVED at **\$4.92** (3 Sep); USRFRUSA (weekly) at **\$4.071** (31 Aug); AAA's headline at **\$4.1473** (data-dated 6 Sep). The withdrawal of the 'AAA all-grades' gloss STANDS, the chart legend below is corrected to match, and the reconciliation stays

open at A1.5. The trigger is not moved and the score does not change (\$9.21, \$9.56b).

1.4 · US retail gasoline — the two charted series (of three; see A1.5)

The scored series (AUTMUSAG Index, navy) and DOE regular retail (USRFRUSA Index, amber, weekly, corroboration only); the dotted line marks the **\$4.75** upgrade trigger, NOT the **\$4.60** downgrade condition. The navy line ends on 3 September at **\$4.92**, backfilled this edition; the amber line still ends on 31 August at **\$4.071**. Neither is extrapolated through the dark 4 and 7 September cells. (!) Neither line is AAA diesel, which took its all-time record on 4 September and is not charted because no trigger is written on it.

1.5 · Strait operational — 4-row summary (full record, every provider and denominator, at A1.4)

Strand	State on 7 September	Source
UKMTO / incidents / mines	JMIC UPDATE 094 OBTAINED (issued 06/09, ICOD 051500Z). THE COUNT IS FROZEN AT 101 — NIL confirmed incidents since 093 , and 094 states in terms that there have been no third-flag merchant incidents since its last report. (!) That is what Iran's 5 September claim to have struck three tankers must be read against: no vessel named, no flag, no damage report, and NO UKMTO warning or advisory on 6 or 7 September on a direct read of both 2026 listings. (!) BOUND IT: 094's cut-off is 051500Z, so the frozen count contradicts the claim only for the window it covers and is SILENT beyond it; 095 is the first product that can bear on the rest. The three US-struck Iranian tankers are logged as ADVISORY 127-26 A/B/C, which JMJC classes a military-on-listed-tanker event and NOT an attack on a third-flag merchant, so they do NOT enter the 101. (!) The advisory text itself names no vessel; the mapping onto the three CENTCOM-named tankers is this document's inference from timing and geography, and is stated as one. (!) THE MINE DELETION IS MORE THAN AN ARTEFACT, BUT NOT YET SETTLED: 094 reproduces 093's weaker 'remain vigilant' formula VERBATIM and again carries no declared danger area, no coordinates and no NAVCENT clearance sentence — two consecutive issues, and on this document's own \$9.18 standard two is a run, not a regime. 095 decides. Hormuz SEVERE , all levels unchanged; five merchant vessels still held	JMIC 094 primary PDF; UKMTO Advisory 127-26; ukmta.org 2026 listings read direct 7 Sep
Transits + blockade	THE ORDER-OF-MAGNITUDE SPLIT INSIDE ONE DOCUMENT WIDENED, and is still never spliced (\$9.24). ¶ JMIC 094 annex, S&P/SeaVision, universe <i>non-facilitated cargo vessels above 1,000 dwt</i> : 0, 5 and 1 across 3–5 Sep — SIX in 72 hours. ¶ JMIC 094 §4C, universe <i>US NCAGS-facilitated only</i> : 59 across a window JMIC labels 3–5 Sep and calls 48 hours, against 44 for 1–2 Sep and 39 for 30–31 Aug. (!) The label and the dates disagree — 3–5 September spans three calendar days — so NO per-day rate is computed and NO ranking against 093 or 092 is asserted. (!) 094 is the FIRST issue to name the split itself, contrasting single-digit independent tracking with NCAGS traffic above twenty a day. It names the gap; it does not reconcile it. ¶ Kpler via Reuters, 6 Sep, universe <i>commodity-carrying vessels</i> : a ten-day average of 10/day , the LOWEST SINCE MAY — 2 transits Saturday, 6 Sunday, mostly on the Iranian route; one VLCC entered on Sunday and none has exited since Wednesday 2 September. LSEG has a Saudi products tanker turning back on 6 Sep. ¶ BLOCKADE TALLY 87 / 3 / 2 , CENTCOM-dated 3 September, from 84/3/2 dated 1 September. (!) A circulating 'about 90' is a press paraphrase, unsourceable to any CENTCOM release, and is NOT used	JMIC 094 §4C and annex; Kpler and LSEG via Reuters 6–7 Sep
CENTCOM / kinetic	(!) IRAN FIRED BALLISTIC MISSILES AT TWO US NAVY WARSHIPS AND CENTCOM PUBLISHED IT. The 5 September release — CENTCOM's first since 1 September and only its second since 15 August — says the IRGC launched at a carrier and a guided-missile destroyer, that both evaded and no US personnel were harmed. The American answer was economic, not territorial: three Iranian tankers, each NAMED with a damage assessment — Downy off Kharg and Stark 1 near Jask 'permanently disabled', Kylo 'completely destroyed' in the Gulf of Oman, which JMIC 094 logs as sunk — with strike video released. The first CENTCOM product of the war carrying a target list AND a BDA, and it DISCHARGES 'tanker for tanker' from TIER 2 to TIER 1. ¶ NO US strike on Iranian TERRITORY in the window; the pause on land runs to a SIXTH day. ¶ Iran's claim to have hit a US uncrewed vessel was called a lie by CENTCOM's named spokesman on 6 September. (!) A reported 4 September attack on US targets in JORDAN is UNCONFIRMED — no Jordanian statement, no Iranian claim, a senior US official saying he is unaware of one — and is never merged with the 31 Aug or 1 Sep Jordan events	CENTCOM release 5 Sep; centcom.mil index read direct 7 Sep; Hawkins via AP 6 Sep
Diplomacy + economic war	IRAN MOVED FIRST AND UNILATERALLY. Its Supreme National Security Council secretary said on state television on 6 September that Iran will declare an EXCLUSION ZONE running from the American blockade line toward the Strait and into the Gulf, with any vessel entering it added to Iran's sanctions list; and that Hormuz passage MAPS are agreed with Oman and will be signed within days. ¶ (!) OMAN HAS PUBLISHED NOTHING CONFIRMING IT. fm.gov.om read direct 7 September, the query being any Omani statement on Iran, Hormuz, mediation, a corridor or a map dated 5–7 September: nothing. The last item on the ministry's statements page is the 25 August joint statement. What Oman DID publish, on 4 September, is its foreign minister's own text saying a solution has not been reached. A bilateral instrument with one signatory's text. ¶ Washington's precondition is unchanged: no talks unless attacks on commercial shipping stop. ¶ THE SANCTION LANDED one day after the last edition recorded that it had not: OFAC designated a Turkish bank and two subsidiaries on 4 September under EO 13902, the SECOND bank of the campaign. (!) NOTHING on 5, 6 or 7 September on a direct read of the recent-actions index. ¶ PGSA blacklist 56 → 57 . OPEC+ held October output UNCHANGED on 6 September	Rezaei via state TV, AP and Al Jazeera 6 Sep; fm.gov.om and ofac.treasury.gov read direct 7 Sep

2 · US ECONOMIC SHOCK — ANALYSIS WITH BOND YIELDS

2.1 · Bond-yield transmission, channel by channel

MARITIME DENIAL — 5/5, held. The incident count froze while the water emptied, and the mine deletion survived a second issue.

(i) The state. The downgrade requires a verified reopening AND traffic above **25%** of normal for ten sessions. Neither leg advanced: no reopening occurred, and the traffic leg moved the wrong way. JMIC Update 094 was issued on 6 September (ICOD 051500Z), Hormuz stays **SEVERE**, every regional threat level is unchanged from 093, and the five held merchant vessels are the same five. **(ii) The confirmed-incident count is FROZEN at 101 — NIL since 093 — and that frozen number is the load-bearing fact of this section.** Iran claimed on 5 September to have struck three tankers on an 'unauthorised' route plus several US-linked vessels, and separately on 6 September to have hit a US uncrewed vessel. No vessel is named, no flag, no damage report; JMIC records no incident; and UKMTO issued no warning or advisory on 6 or 7 September on a direct read of both 2026 listings. **(!) BOUND IT: 094's ICOD is 051500Z, so the frozen count contradicts the 5 September claim only for the window it covers and is SILENT on 6 September.** (!) The three tankers the UNITED STATES struck are in the record, as ADVISORY 127-26 A/B/C, and JMIC classes them expressly as a military-on-listed-tanker event rather than an attack on a third-flag merchant, so they do NOT enter the 101 — a distinction this document adopts rather than blurs. **(iii) THE MINE DELETION IS NO LONGER AN EDITING ARTEFACT.** The last edition's watchlist asked whether 094 would restore the danger-area language 091 and 092 carried. It did not: 094 reproduces 093's weaker 'remain vigilant for mining activity' formula VERBATIM, with no declared area, no coordinates and no NAVCENT clearance sentence. Two consecutive issues make it more than an editing artefact. (!) It is NOT yet settled — on this document's own \$9.18 standard, applied symmetrically, two observations are a run and not a regime, and 095 decides whether it holds a third issue. It is still not a declaration that the mines are gone: the allied record has gone quiet on mines, which is weaker evidence in BOTH directions. (iv) The traffic leg is measurable and it deteriorated on the series that published. (!) Bound it: PortWatch is UNCHANGED at **7%** of typical and a week stale, Windward is **NOT FOUND** for this window, and the facilitated series ROSE. Kpler puts the ten-day moving average at **10** transits a day on 6 September, **the lowest since May**, with two on Saturday and six on Sunday, mostly on the Iranian route; one VLCC entered on Sunday and none has exited since Wednesday 2 September; LSEG has a Saudi products tanker turning back on 6 September. JMIC's own annex gives 0, 5 and 1 across 3–5 September on non-facilitated cargo vessels, against **59** US NCAGS-facilitated transits over a window JMIC labels 3–5 September and calls 48 hours, against 44 and 39 on the two prior reports. (!) The label and the dates disagree, so no per-day rate is computed and no ranking is asserted. 094 is the first issue to NAME the split in its own text, contrasting single-digit independent tracking with NCAGS traffic averaging over twenty a day. Naming a discrepancy is not reconciling it, and this document still publishes both with their universes attached (\$9.24). **(v) The blockade tally moved a second consecutive edition, to 87 redirected / 3 disabled / 2 boarded, CENTCOM-dated 3 September.** A circulating 'about 90' is a press paraphrase that could not be sourced to any CENTCOM release and is NOT used (\$9.19).

OIL PRICE SHOCK — 2/5, held. A THIRD consecutive close above the level on the active contract, and the scored series moved TOWARD it. The rule still names one price and there are still two.

(i) \$9.56 is now three closes old and the arithmetic has stopped being arguable. The active contract closed **\$95.63, \$95.52 and \$96.28** on 2, 3 and 4 September — three consecutive confirmed closes above **\$95**, and **the highest active close since 26 May**. Two closes is this instrument's own definition of a sustained break; three is past it. Applied to COA the oil upgrade fired last week. Applied to CO2, the series the rule has always been read on, it has not: the continuation closed **\$92.32, +\$0.69, \$2.68** below the level. **(ii) The rule is NOT moved, and this edition removes the one comfort the last one had.** On 3 September the scored series moved AWAY while the active stayed through, which made it easy to say the trigger had not nearly fired. This session both moved the same way: the scored gap NARROWED from **\$3.37 to \$2.68, the nearest reading since the 21 August close left \$2.33** — that close was never an edition's scoring reference, so its \$2.33 is not among the fourteen — while the active extended. There is no longer a divergence to hide behind — only a rule written on the wider of two series that are both rising. It is not moved because moving it would be moving it to the series that fires it (\$9.26, \$9.56b). **(iii) Bound the claim and correct the count.** This is the active contract's first RUN OF THREE closes above **\$95** since 20–22 May. (!) It has now closed above the level **TWENTY-SIX** times in this war; the last edition published twenty-six as the count through 3 September, which was one too high, and that figure is **CORRECTED** to twenty-five (\$9.32). **(iv) The basis is stable and the roll was clean.** Brent's has run 0.00, 2.12, 3.08, 3.54, 3.89, 3.96 — one step off zero at the 31 August roll, then FOUR sessions of decelerating widening, +0.96, +0.46, +0.35, +0.07, with no second step and no sign change. (!) WTI's independent basis NARROWED on the same session, 3.27 to 2.91, which is an argument against reading either basis as a market signal rather than a roll artefact. \$9.41 clears; \$9.36 still forbids constructing anything across the two Brent series. (v) The price is not being set in the Gulf alone. OPEC+ held October output UNCHANGED on 6 September at a 31.1 mb/d target, ending six consecutive monthly increases, and no September IEA or OPEC monthly report had been published at the cut — both are **PROSPECTIVE**, not **NOT OBTAINED** (\$9.46).

US INFLATION IMPULSE — 5/5, held. The firing trigger held a fourth close but on its narrowest margin of the run, and the labour print reversed the front end.

(i) The 5y5y forward closed **2.3082%, -0.72 bp**, a **FOURTH** consecutive close above the **2.30%** firing level — but by the **NARROWEST** margin of the four. The run reads 1.10, 0.96, 1.54, **0.82 bp**. **A margin of 0.82 bp is inside a single session's typical move and is reported as such rather than as clearance.** The scored downgrade, the **2.142%** anchor, is **16.62 bp** away and has not been approached in this window. \$9.26 has paid twice already and the rule is not rewritten to the firing level now that the margin is thin. **(ii) The composition inverted again, and it is REAL yield for a second session.** The 10-year nominal ROSE **1.41 bp** while BE10 FELL 0.07 to **2.3532%** — so the whole rise and more came out of real yield, the mirror of 3 September when the whole fall did. BE10 sits **9.63 bp** above its **2.2569%** anchor. The two breakeven measures moved the same way as each other for a second consecutive session (\$9.54). **(iii) The hard print of the window is the labour market and it landed AFTER the last cut, exactly as flagged. August payrolls +162,000 against a consensus near 53,000, unemployment unchanged at 4.1%, average hourly earnings +0.3% m/m and +3.1% y/y — with June and July revised UP a combined +55,000 and July flipping from -23,000 to +21,000.** (!) The reaction function is INVERTED and behaved as this document said it would: a strong print is the hawkish outcome. CME-implied odds of a **25 bp** HIKE on 16 September ran 66.1% on 31 August, 48.4% on 3 September after a governor's remarks and **58.4%** on 4 September after payrolls — ONE outlet's series, held throughout. (!) A second outlet

read 49.4% on 3 September and is NOT spliced into it (\$9.24). (iv) The services survey of 3 September stands behind it: ISM Services 55.4 with Prices Paid 72.6, the fifth reading above 70 in six months, against Employment contracting a second month at 47.8. (!) The two point DIFFERENT WAYS and are not merged: the services employment index is already contracting while the aggregate payrolls print ran hot. What is not in dispute is the input-cost shock arriving in the largest part of the US economy.

TREASURY STRESS — 5/5, held. The volatility leg is satisfied a SECOND close and is now below its pre-war anchor; the yield leg is 24 bp away and Threshold B armed a sixth time on diverging legs.

(i) **MOVE closed 73.10, -1.58 — a SECOND consecutive close below 75, and the first close BELOW the 73.38 pre-war anchor since 28 August.** The last edition's watchlist asked whether one sub-75 close would become two; it did. The downgrade needs the 30-year below **5.00%** WITH MOVE below 75, sustained; the yield leg fails by **24.23 bp**, narrowed from 24.65. (ii) (!) \$9.18 is not discharged by two closes, and the yield leg has not been within 15 bp of its condition since 28 July nor closed below **5.00%** since 6 July. The longest sub-75 run SINCE THE CURRENT REGIME BEGAN on 29 July is NINE closes, 18–28 August, and it ended in a single session on 31 August with MOVE at 75.32; the leg was satisfied and given back inside one session on 5 and on 7 August. (!) Bounded properly (\$9.32): the war's longest sub-75 run is TWENTY-ONE closes, 10 June–10 July, in a regime that no longer obtains. Two closes is the start of a run, not a regime, and the yield leg has never come within 15 bp of its condition. (iii) (!) **THE ANOMALY IS BACK.** Treasury volatility is now **0.28 points BELOW** its pre-war anchor while the 30-year sits **63.17 bp ABOVE** its own. That is a fully normalised expectation of movement around a yield that has not normalised at all — the configuration this document described in August, closed on 31 August, and now records again. The two deviations are reported separately and no composite is constructed. (iv) The curve shape was a **BEAR FLATTENER** falling monotonically with tenor — 2Y +3.01 bp, 5Y +3.04, 10Y +1.41, 30Y -0.42 — with 2s10s -1.394 corroborating independently. **This is a Fed repricing, not a Hormuz one**, and it is the FIRST bear flattener since 1 September, the third distinct curve signature in the five sessions since 31 August. Every **war-high close** set on 1 September at the 2-, 5- and 10-year SURVIVES, and the 5-year came within 1.03 bp of taking its own. (!) The 30-year fell BECAUSE the front end rose: a market pricing a hike into a supply shock is pricing a central bank defending its target, which lifts the near path and leaves the far one. (v) The week ahead is the test. A \$58bn 3-year on 8 September, a \$39bn 10-year reopening on 9 September and a \$22bn 30-year reopening on 10 September — \$119bn of coupons, all settling 15 September, the first day of the FOMC — and the enlarged long-end buyback regime begins on 9 September, the same day as the 10-year. August CPI on 11 September was named by a Federal Reserve governor as the swing input for the 15–16 September decision. (!) No trend is read from \$22bn against August's \$25bn: a reopening is not a new issue (\$9.40).

POLITICAL STRESS — 5/5, held. The scored series backfilled up to a three-month high, and the fuel that was three cents from an all-time record took it.

(i) The scored series moved AWAY from its downgrade for a fourth consecutive edition. AUTMUSAG **BACKFILLED UP to \$4.92** for 3 September against the **\$4.90** carried as last resolved — a **FIFTH** consecutive rise and the highest print since 29 May, expressly NOT a **war high** (\$5.18, 20 May). It sits **32 cents** above the **\$4.60** downgrade condition and 17 above the **\$4.75** that fired the upgrade. The 4 and 7 September cells are dark and are not extrapolated (\$9.30). (ii) **THE RECORD FELL, AND THE INSTRUMENT COULD NOT REGISTER IT.** The last edition put AAA diesel **3.27 cents** below its **all-time record** of **\$5.8159** of 19 June 2022. It printed **\$5.85** the next day, 4 September, taking the record; then **\$5.8819** and **\$5.8970**. AAA's own highest-recorded-price table, read direct on 7 September, now carries **\$5.8970** set **6 September 2026** and no longer displays the 2022 figure. **This is the first US retail fuel price to exceed a pre-war all-time high in this war.** Gasoline did not follow — AAA regular **\$4.1473** against its own **\$5.0165** record of 14 June 2022 — and the divergence widened: **+29.35c** on the week for diesel against **+6.86c** for regular, more than four times the pace for a second consecutive edition. (iii) The cause is a US refining constraint, not a crude one, and it is legible in the EIA weekly for the week ending 28 August: distillate stocks **104.2 mn bbl, 14%** below the five-year average and **10.1%** below the same week of 2025, against refinery utilisation of **98%**, the highest since August 2018. **A system running at 98% has nothing left with which to rebuild a distillate stock that a chokepoint keeps draining.** (!) There is a second, non-Hormuz driver and it must be named rather than absorbed: a Russian diesel export suspension following strikes on Russian refineries. The document does not apportion between the two. (iv) The limitation is the finding, and it is sharper than a slow-moving series. **The political channel is scored on AUTMUSAG, which produced NO PRINT AT ALL in the record window** — dark on 4 and 7 September, its last resolved value a two-cent backfill dated 3 September, before the record was set. The record was set in a fuel the trigger cannot see, and the **\$3.52** anchor and the whole scored history are written on the series that moved least. **That is stated rather than corrected, because re-basing a trigger to the series that would move it is what \$9.21 and \$9.56b forbid.**

ESCALATION RISK — 5/5, held. Iran fired ballistic missiles at two US warships, the US sank a tanker in reply, and the mediator was again the missing signature.

(i) **THE EXCHANGE BECAME DIRECT AND NAVAL, AND THE UNITED STATES PUBLISHED IT.** CENTCOM's 5 September release — its first since 1 September and only its second since 15 August — states that the IRGC launched ballistic missiles toward a carrier and a guided-missile destroyer, that both evaded and that no American was harmed. It then names three Iranian tankers destroyed in reply, each with a damage assessment: *Downy* off Kharg and *Stark 1* near Jask permanently disabled, *Kylo* sunk in the Gulf of Oman, with strike video released. (!) This is the first CENTCOM product of the war carrying a target list AND a BDA, and this document has spent three editions asking for exactly that. (ii) **A STANDING CAVEAT IS DISCHARGED, AND IN THE DIRECTION OF CONFIRMATION.** 'Tanker for tanker' was carried on 3 and 4 September as **TIER 2** — anonymous officials, one outlet, no named confirmation or denial. It is now the theatre commander's own stated policy, on the record and on CENTCOM's own site. The Secretary of Defense said the same in public the same day. **TIER 2 becomes TIER 1.** (iii) Iran's half of the exchange is the opposite. Its claim to have struck three tankers and several US-linked vessels is **UNCORROBORATED** — JMIC 094 records NIL new incidents, the count is frozen at 101, no vessel is named and no UKMTO product exists; and its separate claim to have hit a US uncrewed surface vessel was called a lie by CENTCOM's named spokesman. (!) A reported 4 September missile attack on US targets in JORDAN is **UNCONFIRMED**: no Jordanian statement, no Iranian claim of responsibility, a senior US official on the record saying he is not aware of one, and a live contamination risk from the 31 August and 1 September Jordan events, which must never be merged with it (\$9.13). (iv) What cut the other way: NO US strike on Iranian territory, a sixth day, and NO Iranian attack on any Gulf state after Kuwait on 3 September. The theatre narrowed from host countries back to the water. Against that, Iran's parliament speaker said on 6 September that the era of proportionate responses has ended. (v) **The mediator is again**

the missing signature. Iran's security-council secretary announced an exclusion zone Iran will declare unilaterally, with a sanctions list attached, and asserted that Hormuz passage maps are agreed with Oman and will be signed within days. fm.gov.om, read direct on 7 September — the exact query being any Omani statement on Iran, Hormuz, mediation, a corridor or a map since 4 September — returns nothing; the last Iran-related publication is the 25 August joint statement, and Oman's own foreign minister published a text on 4 September saying no solution has been reached. **This is the 26 August failure repeating: a bilateral instrument announced by one party with no counterparty text.** The channel has been at 5/5 since 9 July and can register none of it (\$9.7).

2.2 · Stage-4 thresholds

	Test	State on the 4 September close, with events to 7 September
A	A failed coupon auction: a clearing yield with a tail above the 1pm when-issued level	UNTESTABLE AS WRITTEN, THEREFORE NOT ARMED ON THE RECORD (\$9.39) — the test needs a when-issued level Treasury does not publish, so it returns NEITHER state; it is carried as UNTESTABLE, which is not the same as unarmed, and contributes nothing to Stage 4 in either direction. NO coupon auction cleared in the window. THE TEST IS IMMINENT ON THREE LEGS IN THREE DAYS — 8, 9 AND 10 SEPTEMBER: a \$58bn 3-year on 8 SEPTEMBER, a \$39bn 10-year reopening on 9 SEPTEMBER and a \$22bn 30-year reopening on 10 SEPTEMBER, all settling 15 SEPTEMBER — \$119bn of coupons landing on the first day of the FOMC. (!) The 8 September bill auctions were shifted off Monday by the federal holiday and total \$246bn across three tenors, which is supply the same week and is stated rather than merged with the coupon figure. (!) NO trend is read from \$22bn against August's \$25bn: a reopening is not a new issue and the denominators differ (\$9.40). The enlarged long-end buyback regime BEGINS 9 SEPTEMBER, the same session as the 10-year reopening — a demand-side offset and a supply event on one day — and the updated tentative schedule promised in SB0607 is STILL NOT PUBLISHED. Read the allotment composition, not an unsourceable tail (\$9.29, \$9.40). A2.3.4
B	30-year above 5.20% WITH 10-year above 4.65%	ARMED, a SIXTH consecutive close — extending the longest armed run of the regime. 30-year 5.2423% clearing by 4.23 bp ; 10-year 4.7821% clearing by 13.21 bp . (!) THE LEGS DIVERGED FOR THE FIRST TIME IN THE RUN: the 30-year margin narrowed a THIRD consecutive close — 5.71, 4.65, 4.23 bp — while the 10-year's WIDENED after two narrowings, 12.80, 11.80, 13.21 bp . That is the bear flattener passing through the test, and it is the mechanism \$9.49 complains of. Ordinals UNCHANGED and this is NOT a new state: SIX armings and FIVE lapses, ELEVEN states, TEN changes since 29 July. (!) \$9.49, the recorded DEFECT, is STRENGTHENED again: B has now been satisfied across SIX closes spanning THREE distinct curve shapes — bear flattener three times, bear steepener once and bull steepener twice, which is three of the four configurations available. A test meant to detect long-end stress has returned the same answer through all three
C	MOVE above 130	NOT ARMED. 73.10 — 56.90 points below C and 41.92 below the 115.02 war high of 26 March. -1.58 on the session, a SECOND consecutive close below 75, and the Treasury downgrade's volatility leg is SATISFIED a second session. (!) The two anchor deviations are reported SEPARATELY and no composite is constructed: volatility is now 0.28 points BELOW its 73.38 anchor and the 30-year 63.17 bp ABOVE its 4.6106 anchor. They are on OPPOSITE sides of their anchors again for the first time since 28 August , which is the anomaly this document named in August: a fully normalised expectation of movement around a yield that has not normalised at all

2.3 · Cross-asset macro record — compressed

¶ THE PROSPECTIVE ITEM RESOLVED AND IT RESOLVED HAWKISH. **August payrolls +162,000** against a consensus near 53,000, unemployment unchanged at **4.1%**, average hourly earnings +0.3% m/m and +3.1% y/y. **June was revised UP +11,000 to +31,000 and July UP +44,000 from -23,000 to +21,000: a combined +55,000, and July flips from a contraction to an expansion.** The prior twelve-month average is reported near +31,000 a month, so August ran roughly five times its own trailing run-rate; the denominator is named because the multiple is meaningless without it (\$9.19). ¶ The rate response: CME-implied odds of a **25 bp** September HIKE 66.1% (31 Aug) → 48.4% (3 Sep, on a governor's remarks) → **58.4%** (4 Sep, on payrolls). A prediction-market reading is at A2.3 and no cross-venue composite is constructed (\$9.24). **August CPI on 11 SEPTEMBER was named by that governor as the swing input for the 15-16 September decision.** ¶ No WPSR falls in this window; the next is DELAYED to 10 September by the federal holiday, which also delays the EIA Monday retail print a second week. The 28 August week stands: commercial crude **-4.5 mn bbl to 424.5**, refinery utilisation **98%**, the highest since August 2018; distillate **104.2 mn bbl, 14%** below the five-year average; gasoline **6%** below. The \$9.28 import test still has NOT reverted: crude imports **6.8 mb/d** on a 6.7 four-week average. ¶ The SPR is unchanged at **286.6 mn bbl**, EIA, data-dated week ending 28 August. (!) Vendors are restating that as 'as of 2 September' — the PUBLICATION date presented as the DATA date; no new print exists. ¶ OPEC+ held October output UNCHANGED on 6 September at a 31.1 mb/d target, ending six consecutive monthly increases — the last edition's **PROSPECTIVE** item, resolved. NO September IEA or OPEC monthly and NO updated spare-capacity estimate existed at the cut: **PROSPECTIVE**, not **NOT FOUND** (\$9.46). ¶ Freight, week 36: TD3C Middle East Gulf-China **WS 677.22**, +45.55 on the week, a round-trip TCE just under **\$704,000/day**. (!) LNG freight moved the OTHER way — BLNG1 Australia-Japan -\$9,000 to \$21,400/day on elevated availability in both basins — so the LNG commodity spikes while LNG tonnage idles. The full macro record, WPSR detail, Treasury-supply internals, war-risk insurance and the freight table are at ANNEX A2.3.

3 · SHOCK SCORE

27 / 30 — CRISIS band (22–30). Held for a twentieth consecutive edition. No channel moved. Rationales are trimmed to the two-document format; \$2.1 carries the detail and A10.2 the full trigger state.

Channel	Score	Basis on the 4 September close	Distance to a change
1 · Maritime denial	5	JMIC 094: count FROZEN at 101, NIL new; blockade 87/3/2 dated 3 Sep. Kpler 10/day, lowest since May	At the cap. 6 non-facilitated against 59 facilitated for 3–5 Sep, one document, and 094 labels the same dates 48h
2 · Oil price shock	2	Brent CO2 \$92.32 , + \$0.69 . Henry Hub 2.87% below pre-war, the smallest discount since 8 July	\$2.68 below \$95 , NARROWED — nearest since 21 Aug. (!) The ACTIVE contract closed above \$95 a THIRD session; \$9.56
3 · US inflation impulse	5	5y5y 2.3082% , a FOURTH close above 2.30% but on its narrowest margin, 0.82 bp . Payrolls +162,000	16.62 bp above the 2.142% anchor. (!) The Treasury yield leg is 24.23 bp away on a DIFFERENT instrument; the two are not ranked
4 · Treasury stress	5	A BEAR FLATTENER : 2-year + 3.01 bp , 30-year –0.42. MOVE 73.10, a SECOND sub-75 close	(!) Volatility leg SATISFIED a second session and BELOW its pre-war anchor; yield leg fails by 24.23 bp
5 · Political stress	5	AUTMUSAG backfilled UP to \$4.92 for 3 Sep, a fifth straight rise, then DARK twice. AAA diesel TOOK its all-time record	32 cents above \$4.60 , moving AWAY a fourth edition. (!) The record fell in the fuel the trigger cannot see
6 · Escalation risk	5	Iran fired ballistic missiles at TWO US warships; CENTCOM destroyed THREE Iranian tankers in reply and NAMED each	At the cap. (!) 'Tanker for tanker' goes TIER 2 to TIER 1 on CENTCOM's own release

Read the composition, not the total (\$9.7, \$9.27). Five of six channels sit at the ceiling, so the score cannot register the first Iranian ballistic-missile attack on US capital ships, the first CENTCOM release of this war carrying both a target list and a battle damage assessment, an Iranian exclusion zone announced with a sanctions list attached and no Omani counterparty text, Hormuz traffic at its lowest since May, or **US retail diesel taking an all-time record that predates this war by four years**. It equally cannot register what cut the other way: no American strike on Iranian territory for a sixth day, no Iranian attack on any Gulf state since 3 September, and Treasury volatility below its pre-war anchor. (!) Channel 2, oil — the only one with headroom — moved TOWARD its upgrade on BOTH series this session. Last edition they pointed opposite ways and that was the reason to hold calmly. This edition they point the same way, and the hold rests on nothing but which series the rule was written on.

4 · WHAT HAS CHANGED SINCE THE 4 SEPTEMBER EDITION

#	Change	Significance
1	Iran fired ballistic missiles at TWO US Navy warships on 5 September — a carrier and a guided-missile destroyer. CENTCOM says both evaded, and answered by destroying THREE Iranian tankers, each NAMED with a damage assessment	The most direct US–Iran exchange of the war, and the first CENTCOM product with a target list AND a BDA. (!) The answer was economic-target, not territorial: no strike on Iranian soil, a sixth day
2	'Tanker for tanker' is DISCHARGED from TIER 2 to TIER 1 . Carried for two editions as one anonymous sourcing chain, it is now the theatre commander's stated policy on CENTCOM's own release, with the Defense Secretary saying the same in public	A standing caveat resolving toward confirmation, the rarer direction. (!) Iran's counter-claim did not: three tankers claimed struck, UNCORROBORATED — JMIC 094 records NIL
3	JMIC 094 issued: the confirmed-incident count is FROZEN at 101 , and the mine-danger-area language did NOT return — 093's weaker formula is reproduced verbatim for a second issue. Blockade tally 84/3/2 → 87/3/2 , dated 3 Sep	The last edition's watchlist question answered NO — but 095 decides whether it holds a third issue. (!) 094's ICOD is 051500Z, so the frozen count is SILENT on 6 September
4	Iran will declare an EXCLUSION ZONE from the US blockade line into the Gulf, entrants added to its sanctions list, and says Hormuz maps are agreed with Oman and will be signed within days	(!) OMAN HAS PUBLISHED NOTHING CONFIRMING IT . fm.gov.om read direct 7 Sep, nothing dated 5–7 September; the last item on its statements page is 25 August, and Oman's FM wrote on 4 Sep that no solution has been reached
5	US retail diesel TOOK ITS ALL-TIME RECORD — AAA \$5.85 on 4 September, through the \$5.8159 of 19 June 2022, then \$5.8819 on the 5th and \$5.8970 on the 6th. AAA's own record table now reads 6 September 2026	The FIRST US retail fuel price to exceed a pre-war all-time high in this war, and the political channel is not scored on it. Regular rose 6.86c on the week to diesel's 29.35c
6	August payrolls + 162,000 on a ~53,000 consensus, unemployment 4.1% , with June and July revised UP + \$5,000 and July flipping from –23,000 to +21,000. September hike odds 48.4% → 58.4% on one venue's series	The PROSPECTIVE item resolved, and hawkish. (!) The 30-year fell BECAUSE the front end rose — a Fed repricing, not a Hormuz one
7	MOVE 73.10 , –1.58 — a SECOND consecutive close below 75 and the first BELOW the 73.38 pre-war anchor since 28 August, while the 30-year sits 63.17 bp ABOVE its own	The last edition's watchlist question answered YES. (!) \$9.18 is not discharged by two: the longest run of this regime is nine closes and it ended in one session. The anomaly of normalised volatility around an un-normalised yield is BACK
8	Threshold B armed a SIXTH consecutive close, extending the longest run of the regime — but the legs DIVERGED for the first time in the run: 30-year margin narrowed to 4.23 bp , 10-year's widened to 13.21 bp	\$9.49 strengthened: B returns the same answer through three of the four curve shapes available. (!) \$9.10 fires on two cells — AUTMUSAG BACKFILLED UP to \$4.92 and SOFR to 3.66, both for 3 Sep
9	The sanction the last edition recorded as not having landed, landed the same day: OFAC designated a Turkish bank and two subsidiaries on 4 September, the second bank of the campaign. OPEC+ held October output UNCHANGED on 6 September	A PROSPECTIVE and a promised-but-absent item both resolve. (!) NOTHING on 5, 6 or 7 September on a direct read of the recent-actions index

5 · SCENARIO MAP

Scenario	Prob.	Content	Shift and why
Return to full war	38%	Sustained US or Israeli strike campaign inside Iran with Iranian reprisals against US bases and Gulf infrastructure	+1. Iran fired ballistic missiles at two US capital ships and the US sank a tanker in reply; Iran's parliament speaker said the era of proportionate responses has ended. (!) Held to +1 because the American answer was economic-target, not territorial, and no strike has hit Iranian soil for six days
Deal collapse on terms	34%	The corridor framework exists on paper and dies over geometry, fees and sovereignty; the blockade and the counter-blockade both continue	+1. Iran is writing the geometry unilaterally — an exclusion zone with a sanctions list attached — and the only bilateral instrument claimed carries one signatory's text. (!) Washington's precondition is unchanged: Iranian conduct, not an Iranian signature
Regional relapse	15%	The war widens to Gulf states directly — UAE, Saudi, Bahraini, Kuwaiti or Qatari territory or infrastructure struck	–3. NO Iranian attack on any Gulf state after Kuwait on 3 September, on a direct check of every host government. The retaliation was maritime only; the theatre narrowed from host countries back to the water
Contained but violent	10%	The present state persists: blockade, counter-blockade, periodic strikes on shipping, no reopening and no general war	+1, recovering a third of last edition's cut: the violence returned to the water and stayed there four days. (!) Only +1, and close to a defect of the line — the shipping in question included two US warships, which is not what 'confined to shipping' meant
Mediated pause	3%	A verified stand-down, resumed talks and a reopening on published terms	UNCHANGED at the lowest reading of the war. FOR: the first concrete signing claim in weeks. AGAINST: it is Iranian-sourced, Oman published nothing confirming it, and Oman's own foreign minister wrote on 4 September that no solution has been reached

Sums to 100. Full war and deal collapse together carry 72%, up from 70. (!) The composition matters more than the total: the two lines that rose are both about the STRAIT and its terms, and the line that fell by three is the one about GEOGRAPHY. The war did not widen this window — it concentrated. Regional relapse is cut to **15%** on a direct check that no Gulf host government reported an attack after 3 September, which is a negative claim and is therefore re-checked rather than carried (\$9.23). Contained-but-violent is raised only **1** point despite four quiet days on land, because the containment it describes did not survive the target set moving to US capital ships.

6 · WATCHLIST · NEXT 24–72 HOURS

#	Watch item	Why it matters
1	The \$58bn 3-year on 8 September, the \$39bn 10-year reopening on 9 September and the \$22bn 30-year reopening on 10 September — \$119bn settling 15 September, FOMC day one, with \$246bn of bills also auctioning on the 8th	The first coupon test since the August refunding, with the enlarged long-end buyback beginning 9 September, the same session as the 10-year. (!) Threshold A stays untestable (\$9.39) — read the allotment composition, never a tail
2	August CPI on 11 September , named by a Federal Reserve governor as the swing input for the 15–16 September decision, with hike odds at 58.4% after payrolls	The inflation channel is scored on a forward that closed 0.82 bp above its firing level. A CPI print moves the 5y5y more than anything in the Gulf will this week
3	Whether the ACTIVE Brent contract closes above \$95 a FOURTH time and whether the scored continuation closes above \$92.67 , its 21 August high	The two moved the SAME way this session for the first time since the roll. (!) If the scored one keeps closing, \$9.56 stops being a disclosure and becomes a decision
4	Whether MOVE holds below 75 for a THIRD close on 8 September, and whether it stays below the 73.38 pre-war anchor	Two closes is a run, not a regime (\$9.18) — this regime's longest is nine and it ended in one session. The yield leg is still 24.23 bp away and has never been within 15
5	Whether Iran promulgates the exclusion zone with actual coordinates, and whether Oman CONFIRMS or DISOWNS the 'agreed maps'	A zone with coordinates is an enforceable claim on water; without them it is rhetoric. (!) An Omani denial would be the first public contradiction of Tehran by the mediator
6	Whether UKMTO or JMIC logs ANY incident from Iran's claimed 5–6 September attacks. The count has been frozen at 101 since 3 September	A frozen count against a public claim of three tankers struck is either fabrication or reporting lag, and the two have opposite implications. (!) 095 also decides whether the mine deletion holds a third issue

ANNEX. The full commentary column of every \$1 table, the twelve-row strait-operational record with every provider and denominator, the complete cross-asset macro record, the freight and war-risk record, the source log, the update protocol, the methodology and the anchor and trigger levels are published in the companion ANNEX to this edition, sections A1, A2.3 and A7–A10. A figure that appears in neither document is a defect; nothing has been cut, only relocated (\$5A).
