

ANNEX · 3 SEPTEMBER 2026

This annex is the companion to the 3 September 2026 edition and is built every day. The edition is capped at eight pages; material is RELOCATED here, never deleted. Section numbering tracks the edition: **A1** carries the full commentary for the live-tape tables and the gasoline chart, the full strait-operational record and the freight and war-risk record; **A2.3** the full cross-asset and macro record, the war-powers schedule and the SPR withdrawal; **A7** the source log; **A8** the on-demand update protocol; **A9** the methodology; **A10** the anchor and trigger levels. A figure marked **NOT OBTAINED** — or, equivalently, **NOT FOUND** — was sought and missed, and is absent from the record rather than unchanged. A figure marked **PROSPECTIVE** relates to a session or publication that had not occurred at the Singapore cut and is not a retrieval failure (\$9.46).

A1 · LIVE TAPE — FULL COMMENTARY

A1.1 · Data integrity — \$9.8, \$9.35 and \$9.41 all CLEAR; \$9.35 DISCHARGED on the 30-year

\$9.8, the ROW-level check: **CLEARs** decisively and by a wider margin than last edition. The 2 September row is a genuine close. **ALL FOURTEEN** tape fields the last edition published as a 2 September intraday moved — Brent by **−\$0.92**, the 2-year by **−3.70 bp**, TTF by **−€1.051** — and the row additionally carries **MOVE** at **79.71**, **VIX** at **15.20** and **Asia LNG** at **3,944**, all three blank at the 2 September cut. Fourteen of fourteen leaves no doubt that the row refreshed.

\$9.35, the FIELD-level identical-value check: **CLEARs on every field, and DISCHARGES the flag it raised last edition**. No 2 September close is identical to four decimals to the intraday published for it. More importantly, the outstanding case resolves: **the 30-year's 1 September close of 5.2730%, carried as UNRESOLVED and PROVISIONAL, is confirmed GENUINE**, because the field moved to **5.2571%** on 2 September on a row that also moved. Everything the last edition hedged now stands as published — the **+3.07 bp** day-on-day change, Threshold B's **7.30 bp** margin, and the long-end leg of Tuesday's bear flattener. (!) The cost of the rule is worth stating plainly now it has run its course: one edition of hedged language, and nothing else. That is the trade \$9.35 was written to make after \$9.25 assumed a live row implied live fields and cost this document a war high. (!) The **STRUCTURAL BLIND SPOT** is repeated because it must be repeated every time the check is run: \$9.35 is a **DAY-ON-DAY** test and is structurally incapable of seeing a restatement that moves a whole **COLUMN** across many sessions at once (\$9.47, \$9.48). It was run at each series' own published precision.

\$9.41, the **BASIS** check: **CLEARs**, as a positive result for a third consecutive edition. The Brent continuation-to-active basis printed **0.00, 2.12, 3.08, 3.54, 3.67** across 27–28 August, 31 August, and 1, 2 and 3 September, having stepped off twenty consecutive sessions of exactly zero at the 31 August roll. A basis that **WIDENS** smoothly, without a sign change and without a second step, is what a correctly-rolled pair looks like when the underlying term structure is moving; a restatement would show as a step. **WTI** behaved identically — **1.70, 2.47, 2.73, 2.86** — across its own 21 August roll, and the two crudes matching in **SHAPE** on the same dates is stronger evidence than either alone. (!) The corollary hardened this edition and it is the one thing in this document that changes a rule's meaning rather than its value: **the two Brent series are now \$3.67 apart and diverging, and on the 2 September CLOSE the \$95 trigger is above one of them and below the other**. Yesterday that was true only of an intraday mark, which this instrument may not score. Today it is true of a settlement price, which it must. \$9.36 forbids constructing anything across the boundary; it is stated at \$2.1 and \$9.56 and **NOT** resolved here. No new restatement was found anywhere: the 31 August and 1 September closes reconcile field by field against what the last two editions published for them on every scored series.

\$9.10, the two-way **BACKFILL** test: fires on **FIVE** cells — **MOVE**, **VIX** and **Asia LNG** for 2 September, and **AUTMUSAG** and **SOFR** for 1 September — and **TWO** are consequential. **AUTMUSAG's 1 September cell, reported DARK yesterday, has printed at \$4.86**, three cents **ABOVE** the **\$4.83** being carried as last resolved and the joint-highest print since **3 June**, equal to the \$4.86 of 4 June — and **NOT** a war high, which remains **\$5.18** on 20 May (\$9.32). The political channel's distance to its downgrade therefore **WIDENED** again, to **26 cents** from 23. **Asia LNG backfilled at 3,944**, which is not a correction but a **WAR RECORD** — the eleventh — arriving in a cell this document had recorded as dark. **SOFR backfilled at 3.66** for 1 September, two ticks below the 31 August 3.68. (!) **\$9.10 has now fired UPWARD on the scored gasoline series in three consecutive editions** — \$4.83, then \$4.86, against a downgrade case that was live a fortnight ago — which is the whole reason \$9.30 forbids reading a trend through dark cells. **MOVE** and **VIX** changed nothing.

A1.2 · Reconciliation of the 2 September snapshot — a one-directional miss again, and this time DOWNWARD

The Singapore-morning cut of 2 September preceded the entire US session — which contained the Beige Book, the WPSR, ADP and the reporting of the tanker doctrine — and once again every field but **TWO** moved the same way (\$9.1, \$9.31). (!) **The direction INVERTED**. Where the 1 September snapshot understated almost everything, the 2 September snapshot **OVERSTATED** almost everything: twelve of fourteen fields settled **BELOW** the mark. Henry Hub and 2s10s are the two exceptions, and they are the same two fields that moved against the direction last edition — which is worth recording, because a field that consistently breaks the pattern is either genuinely uncorrelated with the Gulf session or is being read wrongly. **NO** field is excluded this edition: \$9.35 has discharged and \$9.37 does not engage, so all fourteen gaps are computed.

Field	Published 2 Sep snapshot	2 Sep settled close	Gap
Brent CO2	93.01	92.09	−\$0.92 — and it is the difference between an upgrade \$1.99 away and one \$2.91 away. (!) The snapshot flattered the scored channel; the settled distance is still the narrowest of the war
Brent COA (active)	96.64	95.63	−\$1.01 — MEASURED , both sides post-roll. (!) It settled THROUGH \$95 anyway , by 63 cents, so the reading that the trigger sits BETWEEN the two series is not merely preserved but ESCALATED from a mark to a close
WTI CL2 / CLA	89.18 / 91.86	88.28 / 91.01	−\$0.90 / −\$0.85
Henry Hub / TTF	2.953 / 74.685	2.956 / 73.634	+ \$0.003 / − €1.051 — (!) Henry Hub is one of the two fields to move against the direction, 2s10s the other, exactly as last edition. The TTF snapshot was an intraday above the prior record close; the settled €73.634 is itself a record close, so the record survives a €1.05 downward reconciliation
Asia LNG	no print	3,944	(!) NOT a gap but a BACKFILL , and it arrives as a WAR RECORD — the eleventh — in a cell published as dark. \$9.10
DXY	99.774	99.596	−0.178 — the snapshot had a fourth consecutive session of dollar strength; it settled as a small reversal

Field	Published 2 Sep snapshot	2 Sep settled close	Gap
2-year	4.4060	4.3690	–3.70 bp — the LARGEST gap on the curve. The snapshot implied a NEW war high above 4.3998; it settled below, and the 1 September high STANDS
5-year / 10-year	4.5658 / 4.8102	4.5339 / 4.7780	–3.19 / –3.22 bp — the snapshot implied further war-high closes on BOTH; neither happened
30-year	5.2868	5.2571	–2.97 bp. (!) Computed for the first time in two editions: the field is certified and \$9.37 no longer bars the calculation
2s10s	40.206	40.700	+0.494 — the snapshot had the curve steepening and it steepened MORE. The only field where the snapshot understated the direction it got right
10y BE / 5y5y	2.3588 / 2.3119	2.3488 / 2.3096	–1.00 / –0.23 bp — both settled lower but 5y5y held ABOVE 2.30%, so the finding is unchanged by the gap

ONE READING FROM THE 2 SEPTEMBER EDITION IS **WITHDRAWN BY NAME** (\$9.20, \$9.31): the implicit reading that the curve would extend a bear flattener. It did not; 2 September was a **BULL STEEPENER**, with the front end falling most. (!) The reading of 1 September as a bear flattener is expressly NOT withdrawn — it was correct FOR 1 SEPTEMBER. Four sessions, THREE distinct signatures — flattener, steepener, flattener, steepener — and none is retracted because the next differs. TWO statements are **SUPERSEDED** rather than withdrawn, the distinction kept because they were true when written. (a) 'The 30-year close and its d/d are PROVISIONAL' — correct under \$9.35 at the time, and now discharged: both stand as published. (b) 'AsiaLNG, SOFR, MOVE, VIX, GasAAA and GasDOE have no 2 September print' — three have since printed for 2 September and two more backfilled for 1 September.

ONE STANDING FIGURE IS WITHDRAWN ON RE-VERIFICATION, and this time it is a headline datapoint of this document's own (\$9.23). The Strategic Petroleum Reserve has been carried here as **293.4 mn bbl**, described as current and as the lowest since December 1982. **That figure is the week-ending 14 AUGUST print.** EIA's own highlights table gives **289.7 mn bbl** at 21 August, and the Department of Energy's current figure is **286.6 mn bbl** — so the level published as current was two weeks stale, across at least two editions. **The 293.4 is WITHDRAWN.** (!) The replacement carries three unresolved edges, printed rather than smoothed. (a) It is **DOE-sourced**, not EIA-sourced: EIA's public weekly tables still serve 21 August, and no EIA-attributed figure for the week to 28 August could be obtained. (b) Its data date is given as **28 August** by one outlet and **26 August** by another, both citing DOE, and the conflict is not resolved here. (c) The 'lowest since' label varies across outlets between November 1982, 1982–83 and December 1982. **This document therefore writes 'the lowest in more than four decades' and drops the month entirely** rather than choose between three unverifiable variants. The EIA-confirmed back-series is 293.4 at 14 August and 289.7 at 21 August, a fall of 3.7 in that week, against 404.2 a year earlier.

A SECOND CORRECTION, to this document's own reading rather than to a figure. The last edition recorded JMIC Update 092 as carrying three incidents and characterised them as three attacks. The third is now identifiable and is **NOT an attack**: it is the withheld-name advisory of UKMTO 123-26, in which a military aircraft ordered a vessel to reverse course 57 nautical miles off Oman with a round put in the water alongside. **The correct reading is two attacks and one blockade-enforcement advisory** — BURGAN and SENEGAL PROSPERITY being the attacks. The incident COUNT of 100 is unaffected; the characterisation is corrected. (!) A dating conflict inside the same pair of sources also stands unreconciled: JMIC dates the SENEGAL PROSPERITY incident to 2200 UTC on 30 August, while UKMTO Warning 124-26 and Windward both date it to 31 August. Two of three sources say 31 August; the conflict is printed and not averaged (\$9.24).

A1.3 · Energy, gas and the physical record — full commentary

Brent CO2 closed \$92.09, +\$0.52, a quiet session after Tuesday's **\$3.20**, and it leaves the **\$95 upgrade \$2.91** away. The full edition-over-edition sequence is 9.78, 8.43, 5.55, 5.21, 3.03, 7.73, 8.06, 6.48, 6.90, 6.63, 3.43, 2.91 — TWELVE readings, EIGHT narrowings and three widenings across eleven transitions, and **\$2.91 is the NARROWEST of the twelve edition-over-edition readings**, taking out the **\$3.03** of 21 August. The downgrade leg is **\$19.61** above **\$72.48**, the widest of the war. **WTI CL2 closed \$88.28, +\$0.53**, so both crude legs moved together and in proportion for a second session. (!) The ACTIVE contracts again moved further: **COA +\$0.98 to \$95.63** and **CLA +\$0.79 to \$91.01**, and on the 3 September morning mark COA prints **\$95.75**. Screen quotes for 'Brent' circulating this week refer to the ACTIVE contract; **no SCORED price in this document is taken from the web** (\$3), and the web quotes are not reproduced even as corroboration because they would invite exactly the splice \$9.36 forbids.

THE ACTIVE CONTRACT CLOSED THROUGH \$95 AND THE SCORED ONE DID NOT, so the trigger level now falls between two settlement prices. COA's **\$95.63** clears the level by **63 cents** while CO2's **\$92.09** fails it by **\$2.91**. Yesterday this was true only of an intraday mark, which the methodology may not score; today it is true of closes, which it must. (!) **One claim is narrowed before it is made:** this is NOT the first COA close above \$95. The active contract closed **\$95.14 on 3 June** and above \$95 on twenty-three occasions earlier in the war, so the defensible statement is the first such close SINCE 3 June, on ONE close, against an upgrade that requires a sustained break. The scored continuation has not closed above \$95 since **24 July**. \$9.36 forbids reading the two as one series and \$9.26 forbids resolving the ambiguity toward whichever series would fire the upgrade. **It is NOT resolved here;** see \$2.1 and \$9.56.

The gas complex is where this war is now repricing, and it set two records in one session. Dutch TTF closed **€73.634, +€1.416**, a **NEW WAR-RECORD CLOSE** taking out the **€72.218** set the previous session — the **FOURTEENTH** record close of the war and the **THIRD on consecutive sessions** — and now **+135.8%** against its **€31.227** pre-war anchor. The 3 September morning mark is **€74.200**, higher again, and is NOT treated as a record (\$9.31). Japan/Asia LNG closed **¥3,944, +159**, itself a **NEW WAR-RECORD CLOSE** — the **ELEVENTH** — taking out the **¥3,793** of 25 August and reaching **+136.3%** against pre-war. (!) It arrived as a BACKFILL into a cell the last edition published as dark (\$9.10). **Against both, Henry Hub ROSE five cents to \$2.956 and its discount to pre-war NARROWED from 5.19% to 3.49%** — and to **1.47%** on the 3 September mark, its closest to pre-war in a fortnight. (!) This is a change of state in the control variable. For weeks this document has recorded that American gas did NOT follow the chokepoint while European and Asian gas did, and read that divergence as the cleanest evidence that the complex was pricing a routing problem rather than a shortage. American gas has now begun to move — but by five cents against TTF's €1.42 and Asia LNG's ¥159, so the divergence has narrowed without closing, and the reading stands with that qualification attached.

The refined-product record is the sharpest corroboration in this edition and it is not in crude at all. The ICE gasoil crack reached a **record \$79 a barrel** on 1 September, the US diesel crack is trading above **\$100**, and the ICE gasoil Sep/Nov spread is in backwardation of **\$80 a tonne**; ING's commodities desk writes that the global refining system 'has little slack to make up for the disruptions'. A chokepoint that

lengthens voyages and strands middle distillates hits diesel before gasoline, which is exactly what the two AAA retail series show (A1.5). (!) Physical Iranian supply continues to collapse on the same evidence base: Iran loaded roughly **220,000–255,000 b/d** of crude and condensate in August against ~740,000 in July and ~2 mn b/d in March, and **no Iranian crude cargo has transited Hormuz to China since the blockade was reinstated on 14 July** — about seven weeks. Kharg Island is NOT damaged: NIOC's chief executive dismissed a video posted on 30 August as 'laughable' and said conditions there are calm. Three LNG cargoes from Qatar and the UAE were transferred ship-to-ship OUTSIDE the strait during August, which is highly unusual for LNG, while LNG traffic through Hormuz remains at a standstill and Qatar's force majeure stays extended.

A1.4 · Strait operational — the full record, every provider, every denominator

Provider / universe	Reading	Denominator, and what it is NOT
JMIC Update 092 — US NCAGS	39 Strait transits over the 48 hours 30–31 Aug	'U.S. NCAGS data reflecting U.S.-facilitated Strait of Hormuz transits only'. Stated historical average ~138 vessels/day on a 2025 baseline. (!) THE ONLY LIKE-FOR-LIKE COMPARISON IN THIS RECORD: 39 over 48h is 19.5/day against the 21.7/day implied by 091's 65 over 72h. The facilitated series FELL. It counts vessels the US Navy is shepherding — ESCORT ACTIVITY, not a functioning waterway
JMIC Update 092 — S&P Maritime / SeaVision annex	SEVEN for the SAME 48 hours: 3 cargo and 4 tankers. (!) 092 SPLITS cargo and tankers into two tables where 091 did not. Daily SoH cargo 25–31 Aug: 0, 1, 0, 6, 2, 1, 2. Daily tankers: 6, 4, 1, 0, 0, 4, 0	'Cargo carrying vessels above 1,000 DWT, excluding vessels calling Iranian ports adjacent to the SoH', non-facilitated. (!) 39 and 7 sit in ONE document for the SAME window and are NOT blended (\$9.24). The construction is verified: applying it to Bab el-Mandeb reproduces 092's own 61 exactly
Windward MIOC — all transits, AIS plus dark	1 inbound / 3 outbound = 4 in the 24h to 18:00 UTC 1 Sep , against 13 in the preceding 24h. (!) NONE of the three outbound movements was a tanker; the inbound was a dark bulk carrier	24-hour window, all vessel types, AIS and dark. A DIFFERENT universe from every other row in this table and never merged with them (\$9.24). NO 2 or 3 September count was published
Kpler via Reuters — AIS commodity vessels	~5 on Monday 31 Aug: 4 inbound, 1 outbound. (!) NO crude or product tankers at all. One of the four was an EMPTY handysize gas carrier that reached the strait by the IRANIAN route; the other three were laden dry bulkers. The categorical negative is stated with that carve-out	Commodity vessels with AIS transmitting; transponder-off vessels EXCLUDED. Kpler's own 10-day average ~14; pre-war ~130–140/day. At Bab el-Mandeb the same provider had a three-day high of 27, of which no VLCCs and no LNG carriers
Lloyd's List Intelligence — CORRECTED	108 transits 17–23 Aug, +27% w/w ; inbound +23%, outbound +32.4%; tanker and gas-carrier movements up more than 50%	'Cargo-carrying vessels over 10,000 dwt'. (!) THIS WITHDRAWS the 114 / +30% this document has been carrying for the same week (A1.2). Its brief is dated 27 August; the next is due 3 September on a Thursday cadence — PROSPECTIVE
UKMTO VRA Overview No. 4 — AIS plus dark	101 outbound / 103 inbound over the seven days to 27 Aug; 370 / 384 over 30 days	22% and 23% of UKMTO's OWN pre-conflict average, which is NOT printed on the page obtained. STILL THE CURRENT EDITION: No. 5 is due Friday 4 September on the weekly Friday cadence — PROSPECTIVE , not missed
UKMTO VRA Overview No. 4 — AIS only	'Approximately 90% below pre-conflict baselines'	(!) THE SAME DOCUMENT, A DIFFERENT UNIVERSE. About 10% of normal against 22–23% on the other basis
IMF PortWatch	3 commercial crossings on 23 Aug = 4% of normal	Its own pre-crisis median of ~85/day from a fixed window 28 Feb 2025 to 27 Feb 2026. (!) NO reading later than 23 August was obtainable this edition — the negative is recorded and the method is named in A7
CENTCOM blockade tally, via JMIC 092	82 redirected / 3 disabled / 2 boarded, cited as the 'latest available official CENTCOM figure (29 August)'	(!) A BLOCKADE TALLY, NOT A TRANSIT COUNT , and its DATA DATE has not moved for a FOURTH consecutive edition, and is five days stale. It pre-dates the 1 September American strike wave and Iran's answer entirely, so it is evidence about NEITHER. Prior: 71 on 24 Aug, 68 on 21 Aug
JMIC 092 — cumulative incidents	100 since 1 March; THREE since the last report , against 97 and NIL in 091	Confirmed incidents in the JMIC AOR. (!) Two are NAMED — BURGAN and SENEGAL PROSPERITY — and the third is classified as suspected US blockade enforcement with its name withheld; they are exactly the three this document was carrying as unreconciled. The reconciliation the last edition could not close has been closed by the issuer. A fourth reported vessel, the SIDR, is NOT separately itemised in the 100

A1.4a · Primary text — the six statements the judgment rests on, verbatim

Relocated here from the headline under the two-document format so the judgment can be read at length while the wording stays auditable. Each is quoted as its publisher wrote it; the tier and the retrieval route are in A7.

Source, tier and date	Verbatim
US Central Command , public release 'CENTCOM Completes Strikes on IRGC Targets in Iran' — TIER 1 , 1 Sep	'U.S. Central Command (CENTCOM) forces successfully completed a wave of strikes against Iranian military targets Sept. 1. U.S. forces struck Islamic Revolutionary Guard Corps (IRGC) targets including air defense sites, radar systems, maritime assets and facilities, mine laying capabilities, and communications sites. The strikes follow recent attempted attacks by the IRGC against commercial shipping in the Strait of Hormuz and against American service members.' (!) NO target list and NO battle-damage assessment; CENTCOM declined to specify which targets were struck
Jordan Armed Forces , statement in the early hours — TIER 1 , 2 Sep	Jordanian air defences engaged 13 ballistic missiles that entered the Kingdom's airspace, intercepting and destroying 10 , while three fell in remote areas away from populated centres; no casualties reported. (!) This is a DIFFERENT attack from the 30–31 August salvo Petra put at eight intercepted and destroyed, and no running total may merge them (\$9.13)
President Pezeshkian , at the SCO summit, Bishkek — TIER 1 , 1 Sep	'If the United States returns to its commitments under the aforementioned memorandum of understanding, the Islamic Republic of Iran will immediately reciprocate.' (!) Made on the day Iran was struck. Reporting associates reciprocation with free navigation through the Strait; the text itself does not say so and no Iranian document naming the geometry has been published

Source, tier and date	Verbatim
President Trump , Truth Social — TIER 1 (three independent verbatim relays), 1 Sep	'The United States is, as we speak, striking Iranian Targets near the Strait of Hormuz. The strikes are large and powerful, and in retaliation for the Iranians' failed attempt at adding sea mines to the Strait, which currently has no mines... and the Iranians shooting eight missiles, all successfully knocked down, at our Military Base in Jordan.' And: should Iran respond, it will be hit 'again at a much harder and higher level'
Speaker Ghalibaf , Iranian state media — TIER 3 by this document's own key, 1 Sep	Iranian forces remain 'in complete control of the strait and will not allow it to be opened'; the US is giving ships 'false guarantees' about a southern Hormuz route and vessels attempting it 'are being targeted'. (!) The closest thing to an Iranian claim of responsibility for the tanker strikes, and it sits directly against Pezeshkian's offer the same day
JMIC Advisory Note Update 092 , ICOD 011500 UTC — TIER 1 , 1 Sep	\$2B: 'There remained a continued risk of drifting or uncharted mines in and near the TSS, with mine danger areas still active.' \$5B, flagged '(No change)': 'Clearance and mine-surveying operations continue throughout the Strait of Hormuz', with coordinates from NAVCENT NCAGS. (!) 091 flagged BOTH passages '(No change)'; 092 flags only the second. The WORDS are materially the same — a change in tagging, not in substance

A1.5 · Retail fuel — three series, never compared

Series	Latest resolved	Denominator and note
AUTMUSAG — the SCORED series	\$4.83 (31 Aug, BACKFILLED this edition)	AAA all-grades retail pump, daily, one-day lag. (!) Backfilled UP by two cents from the \$4.81 being carried, and equal to the \$4.83 of 25–26 August — the joint-highest print since 3 June, equal to the \$4.86 of 4 June. (!) NOT a war high: \$5.18 on 20 May stands (\$9.32). Dark on 1 and 2 September. 23 cents above the \$4.60 downgrade condition and 8 above the \$4.75 that fired the upgrade. Preserves the \$3.52 anchor and the full history; never re-based
USFRUSA — corroboration only	\$4.071 (31 Aug survey, BACKFILLED)	DOE regular-grade retail spot, weekly, surveyed Monday. Down 1.4 cents on the 24 August \$4.085 . (!) It backfilled DOWN in the same week AUTMUSAG backfilled UP; the two are different surveys of different products and neither checks the other. Pre-war ~\$2.94, peak \$4.50
AAA published headline — read direct	Regular \$4.1203 , mid \$4.6289 , premium \$5.0095 , diesel \$5.6879 , E85 \$3.1267 — page stamped 'price as of 9/2/26', read 3 Sep	AAA national average, all grades. (!) The page's prior-day row reproduces EXACTLY the \$4.0954 / \$5.6325 this document published yesterday, so the series rolled cleanly and NO restatement occurred. The two fuels continue to diverge, and this session on the DAY as well: regular +2.49c against diesel +5.54c. On the month regular is +2.40c and diesel +32.42c; on the year regular +93.3c (+29.3%) and diesel +\$1.998 (+54.1%). (!) Diesel is 12.80 cents below its ALL-TIME record of \$5.8159 set 19 June 2022 — four years before this war, and never to be called a war high (\$9.32). The 3 September figure had NOT posted at the Singapore cut and is not estimated

A1.6 · Freight, war risk and ports

Baltic Exchange week 36 is DUE FRIDAY 4 SEPTEMBER and is **PROSPECTIVE**, not missed — the roundup publishes on Fridays. Week 35, dated 28 August, therefore stands as the current print for a second edition: TD3C (270,000 mt Middle East Gulf to China) at WS623, 54 points stronger on the week, a daily round-trip TCE just over **\$647,000** for the standard Baltic VLCC; TD34 (Gulf of Oman to China) at WS232.5, a round-trip TCE over **\$219,400/day**; TC2 ARA-USAC at a NEGATIVE TCE of **–\$4,225/day**. (!) A figure of 'TD3C close to **\$585,000/day**, late August' circulates on a secondary surface and is **NOT PUBLISHED HERE**: it is inconsistent with the Baltic's own week-35 **\$647,000** and could not be dated or attributed to a week. It is either a different week or a different construction, and guessing which is the splicing \$9.24 forbids.

WAR RISK: no named, dated broker percentage of hull exists for 1–2 September, and the search was run by date, by broker name and by publication. The best-dated figure remains **3–10% of hull against ~0.25% pre-war**, Marcus Baker of Marsh, **17 JULY 2026** — now seven weeks old and carried unchanged for a fourth edition. (!) A second dated figure is recorded alongside it rather than merged with it: S&P Global Commodity Insights, **22 July 2026**, citing Marsh, put the additional war-risk premium at **7.5–10% of hull**, up from 1–3% weeks earlier. Two Marsh-sourced ranges five days apart; both are published and no interpolation is attempted. Paywalled Lloyd's List and i-law headlines suggesting premiums above 10% could not be dated and are NOT cited. JWLA-033 of 3 March is unchanged.

BUNKERS, read 2 September, and Fujairah is the outlier: VLSFO **\$824.00/mt** (+29.00) and MGO **\$1,431.00** (+43.00), the highest MGO of any listed port; Singapore VLSFO 812.50 (+28.00), MGO 1,192.50 (+46.50); Rotterdam VLSFO 671.50 (+8.50); the Global 20 Ports Average VLSFO 810.50 (+11.50) and MGO 1,378.00 (+23.50). (!) The Fujairah–Singapore MGO spread of about **\$239/mt** is a location premium immediately outside the Strait, and it is the cleanest freight-side corroboration of the chokepoint reading in A1.3. **IRANIAN EXPORTS, TWO DENOMINATORS, NEVER AVERAGED** and unchanged this edition: Kpler puts **KHARG-ONLY** August loadings at **135,000 b/d** against 1.98 mn b/d in February, a 93% collapse; a second Kpler figure of **251,000 b/d** covers ALL Iranian loading points. An Equiti Group estimate of 'roughly 1.5–1.8 mn bpd' is irreconcilable with both, appears to be a pre-blockade nameplate, and is NAMED AND NOT USED. **AMARA** (IMO 9333280) is UNCHANGED — seized, status unknown since 19 August, and no update was obtainable by name, by IMO or against three trackers. Five merchant vessels remain held per JMIC 092, all Somali or Yemeni piracy holdings and none Iranian.

A2.3 · CROSS-ASSET AND MACRO RECORD — FULL

A2.3.1 · The session that was BOTH, and the shape says which half won

1 September carried a Gulf shock and a Fed shock in the same session, and for once they are separable. The Gulf half is the American strike wave from 12:00 EDT and the beginning of Iran's three-country answer that evening. The Fed half is Governor **Barr**, a voting member, who told an audience on the economic outlook that inflation has been too high, that the Board should be prepared to raise if it does not subside, and that price pressures risk becoming entrenched after more than five years above target. (!) **The characterisation must be kept honest, because the only verbatim available is the DOVISH half:** 'If trends in the data give me some confidence that inflation is moderating on a path to 2%, then I think we can take a bit more time to assess our policy stance.' The hawkish half is reported rather than quoted, by CNBC, Bloomberg and American Banker, whose own framing is 'noncommittal on September rate hike'. He would not commit either way and named

his conditions as **Friday's payrolls and next week's CPI**. He is a voting member. (!) **The evidence that the Fed half dominated is the SHAPE of the curve, not the size of the move.** A Gulf supply shock lifts breakevens and the long end. What actually happened is that the **2-year made the largest move on the curve at +5.83 bp and a war-high close at 4.3998%, its first since 23 July**, with the increments falling monotonically out the curve to the 30-year. No Gulf event explains a front-end-led selloff. Compensation did rise — BE10 carried 3.74 bp of the 10-year's 4.81, which is the Gulf half showing up — but it showed up in the level, not in the shape.

A2.3.2 · The data, and September pricing

Item	Reading	Denominator and note
ISM manufacturing , August — released 1 Sep	Headline 54.6% , −1.0 from July's 55.6. New orders 53.7% , −3.0. Inventories 50.6%, −0.6	Diffusion index, ISM Manufacturing Business Survey Committee. Eighth consecutive month of manufacturing expansion; 22nd of overall economic expansion. (!) It sits WITH Dallas (+11.6) and AGAINST Chicago (47.1), but the three are different panels with different geographies and are NOT reconciled (\$9.24). Two of the six largest industries contracted on new orders
JOLTS , July — released 1 Sep	Openings 7.271m , 'little changed', against a 7.33–7.36m consensus. June revised DOWN 177,000 to 7.182m. Hires and separations 5.1m; quits 3.1m; layoffs 1.7m	BLS. Openings-to-unemployed ratio ~1.1. (!) A miss on the level AND a downward revision to the prior month — the softest of the three prints
Construction spending , July — released 1 Sep	−0.5% m/m to a SAAR of \$2,158bn , against a flat consensus; residential −1.3%, nonresidential +0.1%. Seven months to date −3.5% y/y at \$1.245tn	Census C30. (!) TWO DIFFERENT DENOMINATORS in one release : the \$2,158bn is a seasonally adjusted ANNUAL RATE, the \$1.245tn an ACTUAL seven-month cumulative. Not comparable and never to be differenced
GDPNow , Q3 — updated 1 Sep	4.8% , from 4.6% on 26 Aug — UNRESOLVED	(!) A SINGLE aggregator. The Atlanta Fed's own release could not be opened and a second aggregator shows a different path for the same model. Published with the qualification attached and NOT used to support any conclusion (\$9.23)
Polymarket , 16 Sep FOMC — OBTAINED , record updated 1 Sep 13:36Z	25 bp hike 56.5% (+2 on the day, +23 on the week); no change 42.5% (−2, −23); cut 0.55%; 50+ hike 0.65%. Event volume \$74.7m , open interest \$18.5m	Prediction-market LAST PRICES, not a normalised partition — the four legs printed sum to 100.2. Resolves on the FOMC statement. (!) \$9.50 DISCHARGED : the negative published for two editions was method-bound. The page was driven in a real browser to recover the event slug, then read through the structured API. Method varied, negative resolved
CME FedWatch — NOT OBTAINED	Nearest dated: 66% hike, Forbes, 31 Aug; −56% 'coin flip', CNBC, 28 Aug, attributed to Warsh at Jackson Hole	Fed funds futures-implied. (!) The probability grid is a QuikStrike iframe that exposes no text even to a rendered browser read. The negative is method-bound and is recorded as such (\$9.50); a further method is owed next edition
Kalshi — stale, published as a marker only	26 Aug 17:30 ET : hold 67%, hike 33%, cut 1%	Exchange bid/ask MIDPOINTS, not a normalised partition — the three legs sum to 101 as printed. SEVEN days stale against this 2 September read. (!) Superseded by both other instruments. Published ONLY as the pre-Jackson-Hole marker, never as current pricing

THREE INSTRUMENTS, THREE UNIVERSES, NEVER AVERAGED (\$9.24). Polymarket at 56.5% for a hike, CME at 66% ONE day earlier on a different instrument, Kalshi at 33% FIVE days before that. Polymarket is dated 1 September, CME 31 August and Kalshi 26 August: the dispersion is 33 points ACROSS SIX DAYS and three universes, and no central estimate is constructed. (!) **Nor is a trend read across them** — 33, then 66, then 56.5 is not even monotone, and joining three instruments into one path is the splice \$9.24 forbids. The only clean measure of direction is WITHIN one instrument: **Polymarket's own week-on-week change of +23 points** for the hike and −23 for the hold.

A2.3.3 · The Fed calendar, and why 3 September is the last word

Barr on 1 September was the first of only two Board slots before the blackout. Waller speaks at Reuters NEXT on **3 September at 08:30 ET** and is the LAST; the FOMC blackout runs **5–17 September** and the meeting is **15–16 September** with the decision at 14:00 ET on the 16th. No other Fed speech, testimony or press release dated 1 or 2 September was found. The **Beige Book** is due 2 September at 14:00 ET and is **PROSPECTIVE** — the Board's own index page lists the 2 September row with NO link, where every prior 2026 edition carries both HTML and PDF, which is positive evidence of non-publication rather than a retrieval failure (\$9.46). **Payrolls land 4 September** and CPI the week after, and Barr named both as his conditions. The standing FOMC record is unchanged: the 29 July hold was **9–3 with Hammack, Kashkari and Logan** each preferring +25 bp; the target range is **3.50–3.75%**; the 19 August minutes record that 'many participants assessed that policy tightening would likely be necessary if inflation did not decline'; the Chair is Kevin Warsh, confirmed 54–45.

A2.3.4 · Treasury supply, and a promised document that still has not been published

THE BUYBACK SCHEDULE IS OPEN FOR A FOURTH CONSECUTIVE EDITION AND WAS RE-VERIFIED AGAINST THE LIVE FILE.

Treasury release SB0607 of **19 August** announced that buyback operations for longer-dated nominal coupons would increase from **\$2bn to at least \$4bn per operation** across the 10-to-20-year and 20-to-30-year sectors, effective **9 September** and running to 4 November, with further sizing guidance at the 4 November refunding. It promised 'an updated tentative Treasury buyback schedule... at a later date'. The canonical Q3 schedule PDF was re-fetched this edition and is **STILL stamped 'For Publication August 5, 2026'**: its 10 September liquidity-support operation in the 10Y–20Y sector is **STILL capped at a Maximum Purchase Amount of \$2 billion**, as are the 20Y–30Y operations on 24 September and 8 October. (!) **Seven days before the announced regime begins, the promised calendar has not appeared on the canonical page.** (!) That is a statement about one re-fetched primary file, not a proof of non-existence anywhere. (!) And a distinction that must not collapse: the same schedule carries two **CASH-MANAGEMENT** buybacks of up to **\$12.5bn** each in the 1-month-to-2-year sector, announced 2 September for operation on 3 September and announced 8 September for 9 September. Those are a **DIFFERENT** instrument in a **DIFFERENT** sector and the \$12.5bn must never be read as answering the \$2bn→\$4bn question. The 2 September announcement falls inside this window and is **PROSPECTIVE** at the cut.

NO COUPON AUCTION CLEARED in the window, so nothing is added to the Threshold A record and the five-auction primary-dealer run on competitive-accepted stands unchanged at **12.34, 2.09, 10.90, 10.05 and 12.264**, with 12.264% remaining **SECOND-highest**. Treasury auctioned 4-, 6-, 8-, 17- and 52-week **BILLS** on 1 September; bills are NOT a Threshold A input, and in any case **their results were NOT RETRIEVED** — TreasuryDirect serves auction results from a client-rendered page, which is the same failure mode as the UKMTO listings and is recorded as method-bound (\$9.50). **No new Treasury press release dated 1 or 2 September was found.** (!) One genuinely new and quotable line, TIER 2: Secretary **Bessent**, with Larry Kudlow at the G20 finance meetings in Asheville on 1 September, said Gulf producers will route around the chokepoint — **'That will be bypassed in two years'** and the Strait 'will be like a worthless piece of water'. Supporting infrastructure in the same report: Saudi Arabia pushed **~7 mn b/d** through its East–West line to Yanbu during the shutdown; ADNOC's West-East 1 would double Fujairah export capacity from **1.8 to 3.6 mn b/d**, expected online **2027**; an Iraq–Syria–Mediterranean line is costed at **\$15bn+ and four years**. On sanctions he said Treasury has 'five new authorities' and is 'flexing every day', with the stated aim to 'economically asphyxiate this regime' — **but he named no bank and no jurisdiction, and did not say China**. The threshold of a major Chinese bank remains **UNCROSSED**, and **NO OFAC action and NO Iran-related Treasury release exists for 29 August through 2 September**, verified against both primary indexes read direct.

A2.3.5 · War Powers — a statutory expiry into an empty chamber

Unchanged in substance and re-verified against the primary schedule, with one correction to how it is stated. The war-powers notification was dated **10 July**, so the 60-day clock expires **8 SEPTEMBER** and the 30-day withdrawal extension runs to 8 October. The Senate's own tentative 2026 legislative schedule places a **non-legislative period from 10 August to 11 September**, with Labor Day on 7 September, and the chamber does not return to legislative session until **Monday 14 September**. **The statutory expiry therefore falls six days before the chamber that would have to act can act**, and no privileged motion or floor vote can occur before it lapses. (!) A **CORRECTION OF CHARACTERISATION**, not of fact: this document has described those days as 'pro forma sessions'. The Senate's own published schedule lists non-legislative days and does **not itself use that phrase**; the pro-forma characterisation is consistent with it but was NOT independently verified from a primary source this edition, so the finding is now stated as the recess and the return date, which are primary. The House returned 31 August and took no action. (!) The only Congressional activity in the window is a briefing, not a vote: **Adm. Brad Cooper briefed the House Armed Services Committee on the morning of 1 September**, hours before the strikes, and Chairman **Mike Rogers** said afterwards **'They've got a plan'** and that he would 'anticipate' an intensification. **No new war-powers resolution, privileged motion, discharge petition or committee action was found**, and no statement on the 1 September strikes from Kaine, Schiff, Khanna or any other member could be retrieved. The Senate has voted eleven times on Iran war-powers measures in 2026; the most recent, 23 July, failed 47–49 on S.J.Res.180.

A2.3.6 · The SPR — a standing figure WITHDRAWN, and three bases still unreconciled

THE 293.4 CARRIED BY THIS DOCUMENT AS CURRENT IS WITHDRAWN (\$9.23); it was the week-ending 14 AUGUST print. EIA's weekly series has the SPR at **289.7 mn bbl** for the week to 21 August — **40.6%** of the 714 mn authorised capacity, against **293.4** the prior week and 404.2 a year earlier. (!) The 'lowest since' label this document previously attached to it is **ALSO withdrawn**: outlets give November 1982, 1982–83 and December 1982 for the same threshold, so **this edition writes 'the lowest in more than four decades'** and drops the month rather than choose between three unverifiable variants. DOE's 'SPR Quick Facts' page publishes **294.1 MMB across 61 caverns as of 20 August** — Bryan Mound 142.5, Big Hill 89.1, Bayou Choctaw 32.0, West Hackberry 30.5; sweet 101.8, sour 192.3. **DIFFERENT BASES. Publish all, withdraw none of them as bases, compute NO delta (\$9.19).** (!) **THE THIRD FIGURE HAS FIRMED AND IS NOW REPORTED AS THE CURRENT LEVEL, with its provenance stated.** DOE's own current figure is **286.6 mn bbl**, reported as a fall of 3.1 mn on the week. It is reported here as **DOE-sourced, NOT EIA-sourced**, because EIA's public weekly tables still serve 21 August and no EIA-attributed figure for the week to 28 August could be obtained. (!) Its **DATA DATE** is itself disputed — one outlet says the week ending **28 August**, another says **26 August**, both citing DOE — and that conflict is printed, not resolved. **No delta is computed between 286.6 and 289.7**, because that would be exactly the cross-series subtraction \$9.19 forbids. The **2 September WPSR is PROSPECTIVE**: the EIA highlights file was fetched directly and still serves the week ending 21 August, so the 28 August week had not posted at the cut — positive evidence of non-publication, not a retrieval failure. (!) The API estimate itself, recorded as an estimate and never as EIA data: crude **–2.6 mn bbl** for the week to 28 August, gasoline **+0.3**, distillate **–0.3**, Cushing **+0.2**. **EIA STEO is due 9 September; there is no September IEA OMR or OPEC MOMR.** (!) **A MEMBERSHIP CORRECTION IS FLAGGED AND NOT RESOLVED**: this document has described the group meeting on **6 September** as the 'eight-country group'. Secondary sources now describe it as **SEVEN**, the UAE having left OPEC+ in May 2026. **Neither number is asserted this edition** because neither could be verified against the OPEC secretariat's own publications, which did not render. The group approved **~188 kb/d** for September on 2 August — an adjustment to QUOTAS from voluntary adjustments, not to output — and delegates are reported to expect quotas held steady for the rest of 2026, which is a sources-based expectation and not a decision.

A7 · SOURCE LOG

Tier 1 = primary or official. Tier 2 = reputable wire or press. Tier 3 = state media or relayed claim, corroborated against Tier 1 before it is used for anything market-moving. **NOT OBTAINED** = sought and missed, with the method named. **PROSPECTIVE** = relates to a session or publication that had not occurred at the Singapore cut, and is not a retrieval failure (\$9.46). Every 'used for' below was checked against what is actually published in the two documents; an entry that supports nothing published has been deleted.

Tier	Source	Used for
1 · DATA	Tecity Bloomberg extract, 'US Iran BBG Data.xlsx', pulled 3 Sep. 177 rows × 99 columns; tickers read from the header scan, never hardcoded (\$3)	EVERY price, yield, spread, volatility and retail-fuel figure in both documents. The 2 September close is the scoring reference; the 3 September row is intraday and moves nothing. (!) No price is taken from the web
1	US Central Command, public release 'CENTCOM Completes Strikes on IRGC Targets in Iran', 1 Sep, with accompanying strike video	The strike wave, its target categories and its stated cause; the breaking of a 17-day silence in the formal record and a 34-day silence on strikes inside Iran. (!) Also the ABSENCE of a target list and of a BDA
1	Jordan Armed Forces statement via AFP, early 2 Sep	13 engaged, 10 intercepted, 3 fell in remote areas , no casualties — the 1–2 September attack, kept strictly separate from the 30–31 August one
1	JMIC Advisory Note Update 092, ICOD 011500 UTC, obtained as a primary PDF by filename-convention guessing on the media path	The count at 100 / +3 ; the two named incidents and the third withheld; threat levels; the mine passages and their tagging; 39 NCAGS-facilitated and 7 annex transits for 30–31 Aug; the CENTCOM blockade tally and its 29 August data date; five held vessels
1	Pezeshkian at the SCO summit via Reuters, 1 Sep; Qatar MFA spokesman Majed Al-Ansari press conference via Al Jazeera, 1 Sep	The Iranian reciprocity offer in its own words; Qatar mediating with Oman and Pakistan ; that Iran wants a US return to the June MoU BEFORE any temporary route
1	Trump, Truth Social, 1 Sep, taken from three independent verbatim relays (Stars and Stripes, Jerusalem Post, AFP) because the platform is not fetchable	The strike announcement in the President's own words and the escalation threat. (!) Tiered 1 on three-way verbatim agreement, not on a single relay
1	ofac.treasury.gov Recent Actions and home.treasury.gov press releases, both read direct 2 Sep; Treasury tentative buyback schedule PDF, re-fetched 2 Sep; senate.gov 2026 legislative schedule	THE NEGATIVES : no OFAC action and no Iran-related Treasury release 29 Aug – 2 Sep; the buyback schedule still stamped 5 August with the 10 September operation still capped at \$2bn ; the Senate recess to 14 September
1	AAA Daily Fuel Gauge, read direct 2 Sep, page stamped 'price as of 9/1/26'; DOE SPR Quick Facts, re-read 2 Sep; EIA WPSR highlights file, fetched direct	Regular \$4.0954 , diesel \$5.6325 and the full grade set; the clean prior-day roll; the \$5.8159 all-time record of 19 June 2022; SPR 294.1 MMB as of 20 Aug; and that the 2 Sep WPSR had NOT posted
1	ISM Manufacturing report, 1 Sep; BLS JOLTS, 1 Sep; Census C30 construction spending via Trading Economics, 1 Sep; Federal Reserve Board account of Barr's remarks, 1 Sep	ISM 54.6 / new orders 53.7 ; JOLTS 7.271m with June revised down 177,000; construction –0.5% ; that Barr spoke and on what
1	Polymarket — JS-rendered page driven in a real browser to recover the event slug, then read through the structured gamma API	The September FOMC board: hike 56.5% , hold 42.5% , +23 points on the week, \$74.7m event volume. (!) This discharges \$9.50 on a negative published twice
2	Reuters, AFP, ABC News, Al Jazeera, Stars and Stripes, Jerusalem Post, Times of Israel, Bloomberg, Insurance Journal, 1–2 Sep	Iranian impact points; the Bahraini and Kuwaiti engagements; the SIDR and SENEGAL PROSPERITY strikes and their cargoes; two US officials on no American casualties; Trump to Fox on an agreement not being 'worth the paper'
2	Kpler via Reuters, 1 Sep; Lloyd's List Strait of Hormuz brief, 27 Aug, re-fetched; Marisks via Reuters and AFP; Ship & Bunker, read 2 Sep	~5 transits on 31 Aug with no liquid tankers; 108 transits 17–23 Aug at +27% w/w, which WITHDRAWS the 114 / +30% carried previously ; the two-tanker near-simultaneity; Fujairah bunker prices
2	Bessent with Kudlow at the G20, Asheville, 1 Sep; Barr coverage in CNBC, Bloomberg and American Banker, 1 Sep; WSJ via relay on the Cooper HASC briefing and Rogers' 'they've got a plan'	The 'bypassed in two years' and 'worthless piece of water' lines and the pipeline capacities; Barr's conditionality on payrolls and CPI; the only Congressional activity in the window
2	Iranian Red Crescent via AFP, 2 Sep; Ahmad Nafisi, deputy governor of Hormozgan, via Iranian state TV and AFP, 1 Sep; CENTCOM spokesman Capt. Tim Hawkins to AFP	The Kuhestak civilian casualty figure — four dead including a child — used in the headline, \$1.5, \$2.1 and \$4. (!) The only casualty figures for the 1 Sep strikes are Iranian-sourced , which is stated wherever they are used; Hawkins' 'the US military never targets civilians' is recorded as a NON-DENIAL, not as a rebuttal
2	White House public schedule for 1 Sep; Reuters, The Hill, Washington Times and five further outlets searched for a readout	The refiners and distributors meeting — 13:30 ET, Cabinet Room, CLOSED to press, with Burgum, Wright and Jarrod Agen. (!) The NEGATIVE and its method : eight named outlets were searched and all reporting is preview-framed; NO readout, deliverable or measure was published, and specifically no SPR release, export restriction or price control
3	IRNA, Press TV, Tasnim, Mehr, Fars, 1–2 Sep	RECORDED AND NOT USED for any finding : the Camp Titin and Prince Hassan casualty claims, contradicted by the JAF and by two US officials; the 50th MQ-9 claim; the 'Saudi tanker stopped' report carried by three outlets with the identical 'no Saudi confirmation' qualifier; the IRGC supertanker mine-strike claim, which JMIC 092 does not log
NOT OBTAINED	UKMTO Warnings 125-26 onward — FIVE methods: listing pages (client-hydrated, never serve), four filename-convention guesses on the media path (the technique that DID work for JMIC 092), search-engine indexing for rev tokens, the MSC IO mirror (stale at 112-26), and a rendered browser read of the incidents map (exposes no text)	124-26 remains the highest corroborated anywhere. (!) The negative is now well-tested rather than method-bound and is stated as such: 125-26 most likely does not yet exist as of ICOD 011500Z, but a listing page that never serves cannot prove it (\$9.23c)

Tier	Source	Used for
NOT OBTAINED	CME FedWatch (QuikStrike iframe exposes no text to a rendered browser); TreasuryDirect 1 Sep bill auction results (client-rendered); IMF PortWatch after 23 Aug (the dashboard serves only the 23 Aug reading; searched by date and by crossing count); a dated 1–2 Sep war-risk broker quote (searched by date, by broker name — Marsh, Baker, Howden, Gallagher — and by publication); AMARA status (searched by name, by IMO 9333280 and against Windward, IranWire and PortNews); a US, CENTCOM or Jordanian BDA for either Jordan salvo, and a target list or BDA for the 1 Sep strikes (CENTCOM expressly declined to specify targets)	Recorded as gaps with the method named, so the reader can distinguish a fact about the world from a fact about the fetch (\$9.50). (!) A further method is owed on CME FedWatch and on TreasuryDirect next edition
PROSPECTIVE	Beige Book (2 Sep 14:00 ET, Board index lists the row with NO link); EIA WPSR (2 Sep, highlights file still serving 21 Aug); the 2 Sep cash-management buyback announcement; Lloyd's List brief (3 Sep); Waller (3 Sep); UKMTO VRA No. 5 and Baltic week 36 (4 Sep); payrolls (4 Sep); OPEC+ (6 Sep)	Not retrieval failures. (!) In two cases the non-publication is POSITIVELY evidenced rather than assumed — the Beige Book row carries no link where all five prior 2026 editions carry two, and the EIA highlights file still serves the prior week

A8 · ON-DEMAND UPDATE PROTOCOL

#	Step	Detail
1	Refresh and verify the extract	Never build an edition off a stale extract (\$9.22). Check the file mtime AND parse the sheet. This edition: the extract carries a 2 September row against the 1 September row the last edition ran on, and the 1 September row has settled into a genuine close. It is fresh.
2	Parse with a dynamic header scan	Column indices move between uploads. Auto-detect the Brent and WTI front month and take whatever label the header scan returns for DXY. Re-verify the 27 February anchor field by field — done this edition, unchanged on all seventeen fields listed at A10.1, and on SOFR at 3.68, which the tape uses but which is not one of the seventeen.
3	Run all THREE integrity checks	Row-level (\$9.8), field-level identical-value at the precision each series is published to (\$9.35, \$9.48), and the continuation-versus-active BASIS check (\$9.41). This edition: ALL THREE CLEAR, and \$9.35 DISCHARGES the flag it raised last edition on the 30-year. That 1 September close, carried as UNRESOLVED, is confirmed genuine because the 2 September row moved around it to 5.2571% — which is exactly the case the rule was written for. The B conclusion is bounded by the live 2 September mark.
4	Run the backfill check in BOTH directions	\$9.10: yesterday's dark cells must be re-examined, not carried, and a backfill is as likely to run against a trend as with it. This edition it fired on FIVE cells and two were consequential: AUTMUSAG backfilled UP to \$4.86 , three cents above the value being carried and the joint-highest since 3 June though NOT a war high, WIDENING the political distance to 23 cents; SOFR backfilled at 3.68 , its highest since 17 August. USRFRUSA backfilled DOWN in the same week. MOVE, VIX and Asia LNG also backfilled and changed nothing. The test has now fired in BOTH directions across three consecutive editions.
5	Compute deltas and test every trigger	d/d, w/w five rows back, and versus pre-war; explicit trigger tests for the four market channels plus Stage-4 A, B and C. Run min, max and last-prior-occurrence on the full column before writing ANY superlative (\$9.32) — it is what established THREE war-high closes and the fourteenth war-record TTF close this edition, and what stopped the 30-year being written as a record when it is third-highest, and AAA diesel being called a war high when its record predates the war by four years.
6	Verify the news, and re-verify what was inherited	Every claim needs a named source and an exact date, and negative claims decay fastest of all (\$9.23). State the exact query behind every negative. Say NOT OBTAINED rather than estimating, and distinguish NOT OBTAINED from PROSPECTIVE (\$9.46). VARY THE RETRIEVAL METHOD before repeating a method-bound negative (\$9.50) — doing so DISCHARGED the Polymarket negative this edition — a browser drove the JS-rendered page to recover the event slug, then the structured API was read — and the same technique that recovered JMJC 092 was run on UKMTO 125-26 and failed, which is what turns a method-bound negative into a tested one.
7	Build, then QA in three passes	A numeric harness against the dataframe; an adversarial PROSE pass by a reviewer with no access to the source data, run TWICE because fixing introduces defects (\$9.42); and a VISUAL render, which is not optional (\$9.43). Re-run the numeric harness AFTER the prose fixes. Balance the bold tags in every fragment after every edit (\$9.42a).
8	Deliver both documents	The edition and the annex go into the project root together. A file that is not committed never reaches the reader. The annex does not go into the dashboard PDF folder, because the score-history script regexes a score sentence out of every PDF there and the annex has none.

A9 · METHODOLOGY

Six channels, each scored 0–5, summed to 0–30. Bands: 0–7 watch; 8–14 stress; 15–21 systemic-risk watch; 22–30 crisis. Maritime denial and escalation risk are event channels; oil, US inflation impulse, Treasury stress and political stress are market channels scored on confirmed closes.

(a) Confirmed closes only for market channels. No market channel moves on an intraday print. The 2 September snapshot in this document moves nothing — including a Brent mark of **\$93.01** that would put the upgrade under two dollars away, an active-contract mark of **\$96.64** that is THROUGH the trigger level, a TTF mark above the **record close** set the day before, and three further intraday yield highs. (b) Hysteresis. Upgrades fire on a sustained break; downgrades require a sustained reversal past a wider threshold. **It was vindicated this edition.** The 5y5y forward closed BELOW its own firing level on 28 and 31 August and the last two editions came under pressure to redefine the downgrade to meet it. The rule was NOT moved — and on 1 September 5y5y closed at **2.3110%**, back ABOVE the level, ending the break at two. Had the rule been moved it would now be unwinding (\$9.16, \$9.26). (c) The scale saturates in BOTH directions (\$9.7, \$9.27). FIVE of six channels are at the cap, and this edition is the sharpest case the war has produced: the score could not register the delivery of a promised American strike WAVE inside Iran, the breaking of a 17-day silence in CENTCOM's formal record, or an Iranian answer against THREE countries in one night. Nor could it register what cut the other way — an exchange bounded at one wave each, no MILITARY casualties on

either side's official account, against four Iranian civilians reported killed at Kuhestak, and an Iranian reciprocity offer made on the day Iran was bombed. A flat 27 is an instrument at its stop.

Rules exercised this edition, named so the reader can audit them. **\$9.8, \$9.41 and \$9.35 ALL CLEAR.** \$9.35 **DISCHARGES** the flag it raised last edition on the 30-year: that 1 September close of 5.2730% is confirmed genuine, the field having moved to **5.2571%** on 2 September on a row that also moved, so the close, its d/d and Threshold B's margin all STAND as published rather than provisionally (A1.1). This is the case \$9.35 was written for after \$9.25 assumed a live row implied live fields and cost a war high. \$9.10 — the two-way backfill test, fired on FIVE cells and has now fired UPWARD on the scored gasoline series in three consecutive editions. \$9.11 — an announcement is not an event, applied symmetrically: neither Pezeshkian's reciprocity offer nor Rogers' 'they've got a plan' moved a channel. \$9.15 — STATED IN FULL BECAUSE IT DOES NOT APPLY, FOR A **FIFTH CONSECUTIVE SESSION**: where a channel has two downgrade legs, it is only nearing a downgrade when BOTH legs move toward it in the same session; legs moving in opposite directions are ROTATING, and rotation is not approach. On 1 September both Treasury legs moved AWAY again — MOVE to **77.88** and the yield leg to **27.30 bp** — the third state in its FIFTH occurrence and its FOURTH consecutive one. \$9.13 — a prior event is never reused for a later one: the 30–31 August Jordan salvo and the 1–2 September one are kept apart everywhere, on different counting bases, and no running total merges them. \$9.19 and \$9.24 — seven transit universes plus a blockade tally and an incident count that are neither, every denominator named, none spliced or averaged, including the **39** and the **7** that sit inside a single JMJC document for the same 48 hours, and three FOMC pricing instruments 33 points apart that are not centred. \$9.23 — every negative names the page checked, the method and the date range, and TWO standing figures have now been WITHDRAWN on re-verification — Lloyd's List transits, and THIS EDITION the SPR at 293.4 mn bbl, a headline datapoint carried as current while two weeks stale across at least two editions. \$9.26 — no longer engaged on the INFLATION channel, because the trigger it protected came back; but newly and squarely engaged on the OIL channel, where it is what forbids resolving \$9.56 toward whichever Brent series would fire the upgrade. \$9.30 — the scored gasoline series backfilled UP to the top of its recent range and is dark for two sessions after; no trend is read through the gap. \$9.31 — the snapshot missed the whole US session in ONE direction on all but TWO fields, with none excluded, \$9.35 having discharged; TWO readings are withdrawn BY NAME in A1.2 and three more are marked **SUPERSEDED**, while one is expressly neither. \$9.32 — every superlative bounded and checked against the full column by sorting BEFORE writing: the 2-year, 5-year and 10-year ARE **war-high closes** and the TTF close IS the fourteenth war record, while the 30-year is written as THIRD-highest and the eleventh above 5.24, and AAA diesel is expressly NOT called a war high because **\$5.8159** of 19 June 2022 stands. \$9.36 and \$9.41 — both oil bases quoted, no d/d constructed across the roll, and the widening basis escalated into an open methodological problem rather than smoothed over. \$9.37 — NOT ENGAGED this edition: the 30-year gap of -2.97 bp IS computed, the field having been certified when \$9.35 discharged. \$9.39 and \$9.40 — Threshold A untestable as written, no tail asserted, allotments on both denominators. \$9.43 — a visual render was run before delivery. \$9.46 — the 2 September Beige Book and WPSR, the 2 September buyback announcement, the 3 September Lloyd's brief and Waller, VRA No. 5 and Baltic week 36 on 4 September, payrolls on 4 September and OPEC+ on 6 September are **PROSPECTIVE** and are kept out of the **NOT OBTAINED** register — and in two cases the non-publication is positively evidenced. **\$9.50 — DISCHARGED on Polymarket** and re-applied on four other negatives (A7).

\$9.56 — NEW. A **TRIGGER WRITTEN ON A CONTINUATION SERIES STOPS BEING WELL-DEFINED THE MOMENT THE BASIS OPENS, AND THE FAILURE IS SILENT.** The oil channel's upgrade is 'Brent above **\$95** sustained'. That rule was written and has been applied for months in a world where CO2 and COA printed the SAME NUMBER — the basis was exactly zero for twenty consecutive sessions to 28 August. On 31 August Brent rolled, and by 2 September the two series are **\$3.54** apart on the close and diverging. **On the 2 September CLOSE the trigger falls BETWEEN them:** the scored continuation is **\$2.91** below it and the active contract **\$0.63 ABOVE** it. **\$9.9** below, the active **\$1.64** above. (!) **The rule now has two defensible readings that give opposite answers, and nothing in its own text chooses between them.** \$9.36 already forbade constructing changes across a roll; what \$9.36 did not anticipate is a trigger LEVEL sitting between the two series. Three things follow. (1) The channel is held on the scored continuation, which is what the rule has always been applied to, and the alternative reading is published rather than suppressed. (2) The rule is NOT moved to whichever series would fire it — that is the \$9.26 discipline, and this edition has just watched that discipline pay off on the 5y5y. (3) **The problem is disclosed as the largest open methodological question in the document and it is now LIVE on settlement prices, not merely on marks.** The precedent is \$9.16: flag the tension in the open while the distance is still positive, so that the decision is not taken under the pressure of a fired trigger. It will be decided in days.

\$9.51 — CARRIED FORWARD, UNCHANGED AND UNSETTLED. When a defective test is met a second time by a different mechanism, record the MECHANISM, not a verdict. \$9.49 recorded Threshold B's 28 August arming as a defect: a long-end stress test tripped by an **11.14 bp** front-end move in which the 30-year contributed **1.25 bp**. On 31 August B held on a bear STEEPENER in which the 30-year contributed the largest move on the curve. On 1 September B held a third time on a bear FLATTENER again, in which the 30-year contributed the SMALLEST move on the curve as printed. (!) **The written test has now returned the same answer for a flattener, a steepener and a flattener.** That is not two observations of ambiguity but three, and it strengthens rather than resolves the original complaint. The open question is unchanged and is not settled here: whether B should be conditioned on a long-end CONTRIBUTION rather than a long-end LEVEL.

Restatements and comparability. Vendor restatements are normal and make absolute levels non-comparable across editions, though directional analysis is continuous. A contract roll does the same thing to a continuation series silently, which is why the basis check is a standing check — and this edition it cleared while nonetheless producing \$9.56, which is a reminder that a check can pass and still surface a problem. The dual gasoline series is never re-based: AUTMUSAG is the scored reference and preserves the **\$3.52** anchor and the **\$4.75** trigger; USRFRUSA is corroboration only; AAA's published headline is a third series and is never compared with either. The pre-war anchor is the 27 February 2026 close, re-verified field by field every edition; it is unchanged to date. **THREE OPEN ITEMS REMAIN DISCLOSED RATHER THAN DECIDED.** (1) **NEW AND NOW FIRST IN LINE:** \$9.56, the oil trigger's ambiguity across the roll, at **\$3.43** on one series and **\$1.64** through on the other. (2) Threshold B's long-end LEVEL versus long-end CONTRIBUTION question, per \$9.49 and \$9.51, now with three observations behind it. (3) **DOWNGRADED FROM RISING TO DORMANT:** the US-inflation channel's firing trigger came back on 1 September, so the gap between the firing rule and the downgrade rule is no longer live. It is not closed — the downgrade is still **16.76 bp** lower and the break could resume — but it is no longer the largest problem on the list. The oil channel has taken that place, and the oil channel's own separate asymmetry stands unchanged: its downgrade is written as a mediated pause AND 'a close' at or below **\$72.48** while its upgrade requires a SUSTAINED break, which as written makes the downgrade easier to trip than the upgrade. It is **\$19.61** away and not live.

A10 · ANCHOR AND TRIGGER LEVELS

A10.1 · Pre-war anchor — 27 February 2026 close, re-verified this edition field by field, unchanged

Brent	WTI	2Y	5Y	10Y	30Y	2s10s	5y5y	10y BE	MOV E	VIX	DXY	Gasoline AAA	Gasoline DOE	Henry Hub	TTF	Asia LNG
\$72.48	\$67.02	3.3749 %	3.5017 %	3.9375 %	4.6106 %	+55.64 bp	2.142 %	2.2569 %	73.38	19.86	97.608	\$3.52	~\$2.94	\$3.063	€31.23	¥1,669

A10.2 · Live trigger state on the 2 September close, with events to 3 September

Channel	Score	Upgrade	Downgrade	Distance
Maritime denial	5	At max	Verified reopening AND traffic above 25% of normal for 10 sessions	NEITHER leg advanced, and this edition the traffic leg is UNMEASURABLE : no provider published a 2 or 3 September Hormuz count, so no like-for-like comparison exists at all. No JM1C 093 was issued; 092 stands, Hormuz SEVERE , count unchanged at 100 . (!) NEITHER leg moved: no reopening was verified and traffic is unmeasured. The Saudi attribution bears on the escalation and regional-relapse readings, NOT on this channel's legs
Oil price shock	2	Brent above \$95 sustained → 3	Mediated pause AND a close at or below \$72.48 → 1	\$2.91 below the upgrade on the scored CO2 close of \$92.09 , NARROWED from \$3.43 — the TWELFTH reading and the NARROWEST of the twelve edition-over-edition readings, taking out \$3.03 (21 Aug). (!) The ACTIVE contract CLOSED at \$95.63, THROUGH the level by 63 cents. The trigger now sits BETWEEN the two series on a CONFIRMED CLOSE, not merely on a mark. \$9.56 escalates; the rule is NOT moved and the channel is held on the scored continuation, which has not closed above \$95 since 24 July. Downgrade \$19.61 away, WIDENED
US inflation impulse	5	At max — fired 4→5 on 31 Jul on a sustained break of 2.30%	5y5y sustained at or below the 2.142% anchor → 4	16.76 bp above the anchor. The firing trigger HELD above 2.30% for a SECOND close at 2.3096% , so the two-close break of 28 and 31 August is finished. (!) \$9.26 is vindicated a second time — had the downgrade been redefined to the firing level during the break, this edition would be unwinding it. BE10 9.19 bp above its own anchor, NARROWED from 10.11
Treasury stress	5	At max	30-year close below 5.00% WITH MOVE below 75, sustained → 4	BOTH LEGS UNSATISFIED, a fifth consecutive session. Volatility leg LOST and moving away: MOVE 79.71 , a THIRD close above 75 and the highest since 80.48 (3 Aug). Yield leg fails by 25.71 bp , NARROWED from 27.30 — (!) but narrowed because yields FELL, not because volatility did, so the two legs moved in opposite directions again. \$9.35 has DISCHARGED, so this margin is no longer provisional. \$9.15 does not fire
Political stress	5	At max — fired on a sustained break of \$4.75	Three consecutive AUTMUSAG closes at or below \$4.60 with no intervening print above \$4.70 → 4	26 cents above the condition and moving AWAY for a second edition. AUTMUSAG BACKFILLED UP again, to \$4.86 for 1 September, the joint-highest print since 3 June , equal to the \$4.86 of 4 June — expressly NOT a war high, which is \$5.18 on 20 May — then dark on 2 and 3 September. It is 11 cents above the \$4.75 that fired the upgrade, so neither a downgrade nor a reversal of the upgrade is in prospect
Escalation risk	5	At max	Mediated stand-down AND talks resume → 4–3	Moved AWAY on a change of RULES rather than of events. A standing 'tanker for tanker' doctrine is reported approved (TIER 2 , one sourcing chain), with the first US strikes on Iranian tankers in retaliation. (!) Recorded against it: no fresh wave from either side on the night of 2–3 September , the first two-day gap in a fortnight. No talks are scheduled by any party , no movement on the Iran–Oman declaration, and the Supreme Leader's first message since fire resumed names no diplomatic path

A10.3 · Stage-4 thresholds — levels and live margins

	Level	State on the 2 September close	Margin
A	A coupon auction clearing with a tail above the 1pm when-issued level	NOT ARMED — UNTESTABLE AS WRITTEN (\$9.39) , because Treasury publishes no when-issued level. No coupon auction cleared in the window; the 17-week bill of 2 September is not an input. The 13 May 30-year stop of 5.050% is a historical marker only; the US has since term-funded at 5.216% (13 Aug). (!) The 3-year, 10-year and 30-year announcements of 3 September, all settling 15 September, are PROSPECTIVE	30-year 20.71 bp above the 13 May stop, from 22.30 — no longer provisional

	Level	State on the 2 September close	Margin
B	30-year above 5.20% WITH 10-year above 4.65%	ARMED — HELD A FOURTH CLOSE, but BOTH legs NARROWED for the first time in the run. Ordinals UNCHANGED: six armings, five lapses, ELEVEN states (six armed, five lapsed) and TEN changes between them since 29 July. (!) \$9.35 has DISCHARGED , so the third close's margin is confirmed and the whole four-close run rests on certified fields. \$9.49 stays OPEN and is STRENGTHENED : under \$9.51 it is now four observations deep and B has been satisfied across four closes spanning three distinct curve shapes — bear flattener, bear steepener, bear flattener, bull steepener	30-year clears by +5.71 bp (from 7.30, from 4.23); 10-year by +12.80 bp (from 14.81, from 10.00)
C	MOVE above 130	NOT ARMED, and the direction continues to reverse. 79.71 is the highest close since 3 August and the third consecutive above 75. (!) The two anchor deviations are reported SEPARATELY and no composite is constructed (retired 1 Sep): both sit on the SAME side for a third session, and the 30-year figure is no longer provisional now \$9.35 has discharged	50.29 below C; 35.31 below the 115.02 war high. MOVE +6.33 vs its 73.38 anchor; 30-year +64.65 bp vs its own
